#### Meeting Notes - Mike Andrews - 8/19

Participants: Mike Andrews, Director Employment & Training Services (ADOLWD)

Marcia Olson, Training Coordinator, ADOLWD

Kevin Pederson, Alaska LNG, Labor study lead

Kim Fox, Alaska LNG, External affairs

Richard Walmsley, Bechtel

### Overview of discussion:

### Job Bank

- data available to us – widely used by union, non-union, employers; in order to access UI, must register

### AVTEC

- State
- Pre-trade training
- Kenai welding facility

Alaska Works Partnership

- Mission AK ...
- Helmets to Hardhats
- Women in Trades

### **Pipeline Training Center**

- Industry partnership
- Underutilized

### **Construction Academies**

- 400 people / yr
- Need ~ 1000 people / yr to replace losses
- Kenai focused primarily on oil & gas skills
- Fairbanks focus on building skills

### WIIA? - Workforce Innovation Investment Act

### State Training Employment Program

- Funding includes \$5.2M in gov't grants to reduce UI numbers
- Private sector & public funding
- Oil & gas and construction 75% of funding

### Federal grants - \$4M/yr to support

- Displaced workers (e.g. company closures)
- Veterans

ATVEP – Alaska Technical Vocational Program – UI diversion funding - \$12 M annually

Regional Training Centers – operational grant annually through TEVA

- Includes all rural campuses of University of Alaska
- Some include dormitories
- King Salmon Southwest Alaska Vocational Center
- YUUT Bethel
- North West Arctic Career & Technology Center (Nome)
- Kotzabue Alaska Technology Center
- Barrow Illusavik College
- Delta Junction Delta Career Advancement Center
- Galena ?

Fairbanks Training Center – underutilized – significant opportunity

Workforce brokers - APICC (Alaska Process Industry...)

McDowell – study for APICC on workforce

### State update:

- Under federal Workforce Innovation Opportunity Act Alaska identifying priorities and building strategy – will be out in communities in Alaska this fall to consult with public (report to be submitted to feds March 2<sup>nd</sup>)
- Supporting Alaska LNG Project key question is around state ability to scale up
- Legacy jobs should be a focus as well as training transferable skills during construction that will apply to operations
- State also looking at indirect impacts of project on existing workforce (ie. police leave to become security guards)
- Looking forward to continuing the discussion.
- Marcia Olson (State training coordinator) to provide Project with additional information.

| 4                          | Shielding                                                             |                   | Shielding is a phenomenon and not an inherent property of the material. Coatings with superior adhesion to the pipe and between layers (for multilayer systems) will demonstrate a very low risk of shielding CP current. Coating can fail either through mechanical damage or by coating disbondment. 3-Layer coating repair, cold temperature performance and company experience were discussed by the team. AKLNG had also, at PHMSA's suggestion, contacted, Williams Transco to discuss their favorable experience with multi-layer coating systems. |                                                                                                    |  |

| Item | Topics                                                                                                                                                                                                                                                                                                                          | Discussion                                                                                                                                                                                                                                                            |  |  |  |  |  |
| 1    | <ul> <li>Requisite Milestones ADOT&amp;PF will need in order to vacate existing Highway Right of Way with FHWA approval.</li> <li>A. Bond duration for new ROW and construction period.</li> <li>B. Need for warranty period for new highway.</li> <li>C. Timing of vacation of old ROW relative to warranty period?</li> </ul> | In Municipality of Anchorage the warranty<br>period is generally 2 years. 1 year plant<br>materials warranty is typical. One DOT<br>inspector can be expected during construction.<br>Vacation of old road is not expected to link<br>directly to new road warranty.  |  |  |  |  |  |
| 2    | New Highway ROW – determination as to whether all or a portion of this new ROW is to be access controlled along with FHWA concurrence is required.                                                                                                                                                                              | Complete access control is not anticipated,<br>largely because the new section would be<br>different than existing KSH.                                                                                                                                               |  |  |  |  |  |
| 3    | Disposal/Excess ROW - MOU needs to be clear about the methods of disposal of excess lands acquired for this project, outside of the new ROW. Is the developer required to follow the methods of the ADOT&PF ROW Manual 9.9.4 "Methods of Disposal?" Will FHWA concur?                                                           | donation, or transfer to adjoining land owner                                                                                                                                                                                                                         |  |  |  |  |  |
| 4    | Will FHWA view this process as an "exchange" or as an excess land approach, which will require a FMV assessment for both the vacated ROW and the new ROW? Reference ADOT&PF ROW Manual 6.8.2.                                                                                                                                   | FHWA should be consulted on the determination of exchange versus donation, and whether exchange triggers URA. If donation, the DOT may require fair market value for vacation of old road. Without federal involvement, vacation of old road should not trigger NEPA. |  |  |  |  |  |
| 5    | Under URA, appraisals are required for all acquisitions unless<br>acquisition is under \$10K at which time a Waiver Valuation can be<br>completed. Through the MOU between client and ADOT&PF it is<br>recommended that ADOT&PF request from FHWA a higher limit for<br>Waiver Valuations.                                      | Useful when \$10k or less. From \$10k to \$25k,<br>owner can request appraisal. Higher Waiver<br>Valuation limits would likely be approved but<br>may be of limited value as majority of land<br>values likely exceed \$50,000 threshold.                             |  |  |  |  |  |

|      | Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                     |

| Item | Topics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Discussion                                                                                                                                                                                                                          |
| 6    | What are the options for who will hold title during ROW/Design/Construction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | DOT may be open to holding title once the<br>project is under construction. During the<br>ROW acquisition and design phase.                                                                                                         |
| 7    | What will be the role of Kenai Peninsula Borough (KPB)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | The Borough is the platting authority which<br>may be required for any partial acquisitions or<br>resale of remnant properties. KPB is also the<br>likely recipient of the remaining usable section<br>of the old highway.          |
| 8    | <ol> <li>Is ADOT&amp;PF aware of any time that URA 24.7 has been requested<br/>by ADOT&amp;PF and granted by FHWA? This involves relocation of a<br/>portion of a federally-funded highway. Can FHWA work with<br/>developer through the various ROW processes while making sure<br/>there is no reduction in any assistance or protection afforded<br/>relocatees under 24.7?</li> <li>§24.7 Federal Agency waiver of regulations.<br/>The Federal Agency funding the project may waive any requirement<br/>in this part not required by law if it determines that the waiver does<br/>not reduce any assistance or protection provided to an owner or<br/>displaced person under this part. Any request for a waiver shall be<br/>justified on a case-by-case basis.</li> </ol> | The waiver of regulations for an entire project<br>is unlikely but can be addressed with FHWA.<br>Section 24.7 has typically been used for single<br>relocation payments outside the regulations.                                   |
| 9    | There needs to be agreement between FHWA and ADOT&PF about which agency is on point for approvals, concurrences or related actions under this project (KSH relocation).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Based on conversation, DOT appears ready to facilitate agreements with FHWA. AKLNG / HDR should develop a position paper to give DOT some options to discuss with FHWA on a preferred course of action toward exchange without URA. |

| Item | Agenda Item(s) / Notes                                                                                                                                                                                                                                                | Comments |
| 1    | ADOT concurs that MOU should capture Agency commitment to review final design effort scope.                                                                                                                                                                           |          |
| 2    | ADOT is amenable to regular project meetings (monthly or bi-weekly) and agrees that existing Reimbursable Services Agreement (RSA) is appropriate funding mechanism.                                                                                                  |          |
| 3    | ADOT concurs that AKLNG will develop proposed methodology and<br>approach to URA and NEPA for meeting with FHWA in Juneau in early<br>October; FHWA/ADOT discussions to-date have been informal and not<br>focused on NEPA compliance.                                |          |
| 4    | ADOT expressed interest in the Kenai Peninsula Borough accepting maintenance of northern section of existing KSH alignment.                                                                                                                                           |          |
| 5    | ADOT indicated clear understanding and documentation with DNR is needed for vacation of existing ROW and dedication of new ROW. ADOT to determine role of ADOT Commissioner in approval process.                                                                      |          |
| 6    | ADOT acknowledged ideal scenario of ROW vacation at the time of acceptance for relocated KSH.                                                                                                                                                                         |          |
| 7    | ADOT indicated John Linnell is the subject matter expert on ROW and<br>that ADOT holding title after options are exercised and before<br>construction starts does not seem unreasonable given the standard<br>process of certifying ROW before starting construction. |          |
| 8    | ADOT acknowledged its role in public involvement would be to represent<br>public interests and not act as an advocate for or opponent against the<br>project, confirming that stakeholder engagement roles should be defined<br>in the MOU.                           |          |

| 6    | <ul> <li>Tom - could a second tier approach be used to develop a background with the CCP monitoring data? In other words, could a background by wind speed approach based on A-Pad data be applied for certain wind sectors (winds blowing from west), but background concentrations by wind speed based on the CCP monitoring data be applied for other wind sectors (winds blowing from the east)? The 2014 USEPA guidance suggests use of upwind and downwind monitoring data to appropriately represent background concentrations.</li> <li>Alan – ADEC is willing to entertain other approaches to background development; the project should submit a proposal to ADEC for consideration.</li> <li>Agency Engagement         <ul> <li>Jim Pfeiffer (AK LNG) – we could try to work the proposal to address potential NEPA and PSD issues.</li> <li>Alan – likely can't develop one modeling protocol for both NEPA and PSD. For NEPA, AK LNG will need concurrence from USEPA Region 10 (Herman Wong). ADEC does not see any issues with using the background by wind speed approach. Considering a background approach dependent on both wind direction and wind speed (CCP and A-Pad data) may require additional scrutiny as well.</li> </ul> </li> </ul> | Damiana/<br>Schuler |          |
|      | <ul> <li>Other Approaches to Developing Background Concentrations</li> <li>Alan – ASAP submitted a modeling protocol for a nearby gas treatment plant that proposed to use CCP monitoring data to develop background concentrations for modeling, in lieu of explicitly modeling CCP and CGF. ADEC approved the protocol in May 2015. Given this approval, ADEC wanted to offer this as a suggestion to AKLNG in case they were considering something</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                     |          |
| 5    | General Discussion on Ozone<br>ADEC brought up the possibility of using a tier II approach to the ozone<br>concentrations used for calculating NO2 concentrations. There were discussions<br>about ozone variations around the State.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Damiana/<br>Schuler |          |
|      | ADEC believes that the Second Tier background approached by the project would be acceptable given approval for the approach for the Drill Rig Working Group, and the considerations addressed above in the notes. However, ADEC would like to see the approach articulated in a protocol for formal review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                     |          |

| 1                    | Summary of Meeting |                   | The focus of the meeting was to confirm that the proposed<br>engineering scope of work for the GTP that was previously submitted<br>to FERC's LNG Engineering Branch met FERC's requirements. Given<br>that the GTP does not handle LNG and is not jurisdictional to<br>49CFR193 there are aspects of RR13 requirements that do not<br>comport with GTP design requirements. As well, timing for certain<br>engineering deliverables was inconsistent with AKLNG schedule need<br>The proposed engineering scope of work was reviewed, several<br>changes were requested by FERC and a path forward was agreed to<br>verbally by both parties. The pre-FEED P&ID's proposed are<br>acceptable with a clear notation from FERC that there may be some<br>additional time required for final P&ID review and approval at the ba<br>end of the approval process. |          |  |  |

| 1    | Update on KSH relocation project                     | 1) DOT&PF discussed the review of the feasibility report and adjudication of DOT&PF comments. Response: Comments discussed during the 09-28-15 DOT&PF review meeting have largely been resolved in the revised report. Feedback from Alaska LNG project on construction and operations phase employment has been received and is being incorporated into the TIA. Schedule for completion of internal review draft is three weeks out. 2) DOT&PF asked about the URA framing document that will support discussion with FHWA on the applicability of the URA to the KSH relocation project. They are concerned about the project schedule and the need to advance discussions with FHWA prior to the onset of a land acquisition process for the KSH relocation. Ken requested that the document provide information about where the project has looked for similar situations. Response: An internal draft of the framing document is in the works. After review and approval by Alaska LNG Project, the document will be provided by the project to DOT&PF. 3) Ken M. mentioned attending the AASHTO sub-committee on design meeting recently. He asked the 18 states in attendance if they had experience with a similar project where a private project proposed to acquire ROW, construct and transfer ownership of a new NHS facility to the state transportation agency. No parallels were offered by the participants. With respect to the URA, 23 CFR presumes federal funding. As that is not the case, the URA would not apply. |
| 2    | Plan prep meeting ahead of KSH relocation open house | Discussed the October 19th open house in Nikiski. DOT&PF asked about meeting format and how the information would be delivered to those attending. Response: Project open house is a three-hour session that will not have a separate presentation. DOT&PF and KPB staff will be there to answer questions relative to their involvement in the project. Mark D. requested an opportunity to brief Dave about the meeting content on the 15th or 16th. Dave stated that he would be available on either day. Intent is to hold a briefing via teleconference to review the open house posters. Jenn Adleman to set up a briefing with Alaska LNG Project and Dave Bloom on 10-15-15.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 1    | KSH General project issues,<br>FHWA and the URA | - Briefly discussed scheduling regular status meetings Expressed desire to keep<br>abreast of the schedule to help ensure that DOT has the resources in place to be<br>responsive The State is in the process of updating the ROW Manual now with<br>completion anticipated before year's end. This schedule is important to maintain for<br>both the DOT and FHWA o Developing a new chapter to the manual that can be<br>added by addenda. (Concern with delivery impacts to linking KSH-related content to<br>current effort). |  |  |

| 1    | Project Overview     | During the project overview, ADOT&PF expressed interest in the following: where the test pipe originated, if 48" pipe would change the wall thickness, welding and Cook Inlet pipe lay procedures, fabrication locations (domestic/in-state versus foreign/out-of-state), concern over construction demand drawing down ADOT&PF maintenance resources. ADOT&PF expressed interest in receiving the project newsletter.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| 2    | Integrated Logistics | During the Integrated Logistics overview, ADOT&PF expressed interest in: evaluation of dirigibles; including ADNR in future in-depth discussions about specific infrastructure improvements; potential mitigation for weigh stations (e.g. portable stations); a recommendation to review the Statewide Transportation Improvement Plan (STIP) to evaluate potential conflict between highway construction projects during Alaska LNG project construction; better understanding of Fairbanks rail yard logistics and integration with the Fairbanks Metropolitan Area Transportation System (FMATS). ADOT&PF confirmed the two-year STIP update would occur near early 2017. The project Team committed to reengage with ADOT&PF in 1Q2016 in advance of second draft resource report submittal to FERC to avoid surprises around resource report public infrastructure content. |  |  |  |

| 1    | Introductions                                                          | After meeting participant introductions and a safety moment on winter driving, Project representatives presented an overview of the Project including purpose, general design components, and staged development process.                                                                                                                                                                                                                                                    |  |  |  |
| 2    | Cook Inlet pipeline routing overview                                   | Project representatives presented an overview of the Cook Inlet pipeline routing, design, and construction methodology. Topics of discussion included the benefits and drawbacks of having the pipeline laid on the seafloor or buried under the seafloor, particularly as it relates to an anchor from a large vessel impacting the pipeline. A USCG representative asked about the potential size of the safety zone for the pipe lay operation during construction phase. |  |  |  |
| 3    | Construction-phase marine<br>operations plans                          | Project representatives provided an overview of the Project's planning of construction-phase emergency response and vessel assurance activities.                                                                                                                                                                                                                                                                                                                             |  |  |  |
| 4    | Other topics of engagements -<br>WSA, pipe-in-pipe, GPS tower,<br>etc. | The group discussed other topics of engagement between the Project and the USCG, including the waterway suitability assessment, pipe-in-pipe design and use in the marine transfer area of the trestle, and firefighting capability in the marine transfer area. A USCG representative also notified the Project about another point of coordination related to a differential GPS tower located in Nikiski which is used to provide marine communications in Cook Inlet.    |  |  |  |

| Item | Agenda Item(s)                                                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
| 1    | EPA Region X NEPA Air<br>Modeling Resources will be limited<br>starting December 2015 | EPA R10 Modeling contact (Herman Wong) retiring in mid-December, available to assist with protocol issues until end of November. No planning for backfill until after Herman retires, likely mid-2016 before replacement will be on board, interim support likely through R10 Office of Environmental Assessment (OEA), with some involvement by the R10 Office of Air Waste and Toxics (OAWT). OEA's Zach Hedgpeth will remain the contact for emissions inventory. Pending changes to EPA's "Appendix W" Guideline on Air Quality Models will create a certain ambiguity in modeling requirements- NEPA modeling likely to be conducted under current Appendix W, PSD modeling likely to be subject to updated Appendix W. Potential removal of CALPUFF as a guideline model of concern to Federal Land Managers (FLMs) in limiting tools available for "Air Quality Related Values" (AQRV) analyses. No MOU between EPA/FLMs and FERC as with other NEPA Lead Agencies regarding how AQRV analyses are to proceed. No FLM meeting currently planned, may need to reconvene to discuss AQRV protocol. |  |  |

| Item | Agenda Item(s) | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| 1    |                | EPA's Appendix W modeling guideline uses "significant concentration gradients" to determine what offsite sources must be explicitly modeled, vs. those represented by background monitoring. Alaska LNG (Project) presented their analysis of significant concentration gradients relevant for an alternate site that is approximately 3 miles north of the proposed site of GTP. The Project demonstrated that the alternate GTP site was beyond the significant concentration gradients of all other offsite sources, so no offsite sources need be explicitly modeled and PBU A-Pad background data is appropriate to complete cumulative modeling. Consistent with recent past practice for similar projects in Alaska, the Project proposes to use a qualitative approach to determining impacts of ozone and secondary PM2.5 rather than photochemical grid modeling. The loading and atmospheric chemistry in Alaska is such that impacts can be appropriately represented through qualitative analysis. ADEC was in general concurrence with these approaches, and willing to participate in further discussions with EPA Region 10 and the Project. |  |  |

| 1    | Meeting Purpose: To Discuss<br>ExxonMobil proprietary Tensile<br>Strain Capacity Model & carry out<br>independent third party review |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 2    | Meeting Summary                                                                                                                      | An introduction to Strain-Based Design (SBD) pipelines and ExxonMobil (EM) SBD technology portfolio was provided and an overview of tensile strain capacity prediction research was provided. The development of the GTN model-based tensile strain capacity prediction tool was discussed by the group. Full-scale pipe testing to measure tensile strain capacity was reviewed and discussed. The two day meeting concluded with a review of EM SBD pipeline integrity management technology. |  |  |

|      | Alaska LNG early information request response issued on Oct 1 2015 – FERC feedback/questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |  |
|      | <ul> <li>FERC requested clarification on when the Alaska LNG Project plans further engagement with Federal and State<br/>agencies. The Project team indicated the next round of agency consultation is planned for Jan 2016.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |
| 1    | <ul> <li>FERC indicated their expectation that an air modeling protocol be developed during pre-filing. In particular, the protocol should address issues that are unique to NEPA e.g. marine vessel emissions, Sensitive Class II AQRVs.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |  |
|      | <ul> <li>FERC's expectation is that the Alaska LNG Project team will continue to engage and work with agencies on<br/>approaches to air quality modeling impact analyses and mitigation, and seek to resolve issues with agencies<br/>directly. The Project team confirmed intentions that align with this expectation.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |  |
|      | Alaska LNG Project team proposed responses to Agency Comments on the Project's proposed air quality approach – refer to 'Alaska LNG Project Proposed Responses to Agency Comments Draft 10-12-15'. Items for discussion highlighted by Alaska LNG.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |  |
|      | <ul> <li>NPS requests that the Alaska LNG Project model air quality impacts from construction emissions. However,<br/>FERC noted that while there may be grounds to model impacts for environmentally sensitive areas (e.g. Class 1<br/>areas) they have never required an applicant to model construction emissions. FERC noted that modeling<br/>construction emissions is very difficult and distinctly different from modeling operations emissions.</li> </ul>                                                                                                                                                                                                                                       |  |  |  |  |
| 2    | <ul> <li>Whilst FERC is generally supportive of the Project team's rationale for not modeling construction emissions, they did clarify that resolution of this issue should first be sought with NPS directly. FERC recommended follow up with NPS by the Project team to ensure an understanding of the basis of NPS' request e.g. relevant precedents etc., The Project should provide a full explanation of its position, including a qualitative assessment of the effectiveness of construction BMPs, as part of the dialogue with NPS. FERC also recommended that if NPS persists with their position, the Project team should seek NPS guidance on how to model construction emissions.</li> </ul> |  |  |  |  |
|      | <ul> <li>FERC was in general agreement with the Project team's proposed approach to provide documented justification<br/>for non-PSD quality ambient air quality data sources. There are many valid reasons to use data other than the<br/>closest data source.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |
|      | <ul> <li>FERC was in general agreement with the Project team's rationale for using the MM5 simulation rather than WRF<br/>for Cook Inlet analyses. However, FERC suggested further dialogue with EPA to explain the Project's rationale<br/>for use of MM5, and to understand EPA's reasoning for suggesting WRF. FERC offered to participate in a follow-<br/>up phone call with EPA, ADEC and the Alaska LNG Project team if agreement cannot be reached.</li> </ul>                                                                                                                                                                                                                                    |  |  |  |  |
|      | <ul> <li>FERC indicated that analysis against NAAQS criteria for Heater Station #1 would be sufficient (not necessary to address AQRV). FERC indicated that this would be an example where the Project should clarify that it performed analysis beyond minimum requirements.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |

| Item | Agenda Item(s) & Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
|      | Project modeling protocol Table of Contents – refer to 'Alaska LNG Project Modeling Protocol TOC Draft 11-1-15'. Items for discussion highlighted by Alaska LNG.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |
|      | FERC indicated that they have not often historically required air quality modeling or even emission calculations for different project alternatives. FERC noted that it evaluates each alternative, progressively obtaining more refined information as an alternative remains feasible and potentially preferable, until it is clear an alternative is not feasible or preferable, at which time, no further analysis of that alternative is necessary. Emission estimates and modeling of emissions impacts from alternatives. Modeling may only be required when emissions may be a significant point of difference between alternatives. Modeling may only be required for feasible and potentially environmentally preferable alternatives. Therefore it was agreed that Project Alternatives are not applicable to the Modeling Protocol at this time, and that emissions for alternatives are most appropriately addressed in RR 10 (Alternatives), not RR 9. |  |  |  |
|      | <ul> <li>FERC is supportive of comparing Project impacts to standard FLAG AQRV evaluation criteria. Acceptable impacts should be determined on a case-by-case negotiated basis with Federal Land Management agencies. The expectation is that Class I areas will have a higher level of protection than sensitive Class II areas. FERC can help facilitate AQRV discussions with FLMs if needed.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |
| 3    | <ul> <li>Normal Operations scope should align as closely as possible with the air permitting process. A key area where FERC requires additional modeling analysis is for marine vessel operations within the moored safety/security zone around the Marine Terminal (typically 500 yards or as set by the US Coast Guard) and for LNGC operations whilst at dock/loading. Be sure to capture all of the marine operating scenarios (transit, hoteling, loading, etc) and vessels (LNG carriers, tugs, coast guard escort vessels, etc).</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |
|      | • For modeling, short-term standards should be evaluated based on the maximum equipment emission rates. Long-term standards can be evaluated using average emission rates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |
| 1    | <ul> <li>The NEPA cumulative modeling analysis should be similar to the air permitting cumulative analysis. One difference in the cumulative analysis is that offsite sources evaluated in the NEPA process should include non- jurisdictional sources (i.e., connected actions), and other reasonably foreseeable sources in the public domain, qualitatively at a minimumIf more complete information is available prior to filing the FERC application, the Project team should consider including a quantitative assessment.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |
|      | <ul> <li>FERC was in general agreement with the Project team's approach to perform a qualitative secondary PM<sub>2.5</sub> and<br/>Ozone assessment. FERC has not previously required a quantitative photochemical modeling analysis unless<br/>there is an ozone nonattainment area in the project vicinity or it was requested by the state air permitting agency<br/>as part of a PSD review. Alaska does not have an ozone nonattainment area so modeling is not required for the<br/>Alaska LNG Project at this time.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
|      | <ul> <li>FERC identified that an air-permit type PSD increment analysis is only required for facilities that trigger PSD<br/>review and exceed the SILs. LNGC and other marine vessels are to be included as increment consuming<br/>sources for the LNG Terminal modeling.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
|      | <ul> <li>For general Project precedent guidance from an analogous greenfield project, FERC recommended the Corpus<br/>Christi EIS and FERC application documents.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |
|      | Other items - Conformity Analysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |
|      | <ul> <li>If Project-related direct and indirect emissions within a nonattainment or maintenance area are not in the SIP,<br/>they need to be accounted for by FERC in a conformity analysis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |
| 4    | <ul> <li>Given the project complexity, FERC recommended that Alaska LNG Project legal staff review of the 2010 rulemaking updating the General Conformity Regulations, along with past EPA issued guidance documents, to establish a Project position about which direct and indirect sources are considered direct and indirect for the purposes of conformity analyses and determination.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
|      | <ul> <li>Considerations were construction emissions, commuter sources, freight sources, work camps – wherever<br/>emission may be generated within the Fairbanks non-attainment zone.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |
|      | • FERC indicated their preparedness for further dialogue with the Alaska LNG Project team, at recurring intervals if needed, to review and discuss the Project team's considered position on the scope of the Alaska LNG Project's conformity analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |

| 1    | USEPA conceptual concurrence<br>received on application of<br>significant concentration gradients<br>at GTP alternate site and<br>qualitative impact analyses for<br>Ozone and PM2.5 for Project | EPA's Appendix W modeling guideline uses "significant concentration gradients" to determine what offsite sources must be explicitly modeled, vs. those represented by background monitoring. Alaska LNG (Project) presented their analysis of significant concentration gradients relevant for an alternate site that is approximately 3 miles north of the proposed site of GTP. The Project demonstrated that the alternate GTP site was beyond the significant concentration gradients of all other offsite sources, so no offsite sources need be explicitly modeled and PBU A-Pad background data is appropriate to complete cumulative modeling. Consistent with recent past practice for similar projects in Alaska, the Project proposes to use a qualitative approach to determining impacts of ozone and secondary PM2.5 rather than photochemical grid modeling. The loading and atmospheric chemistry in Alaska is such that impacts can be appropriately represented through qualitative analysis. EPA was in general concurrence, and willing to provide that concurrence in written response to a request letter from project. |  |  |

| 1    | Summary of Call | Questions from the project team to FERC were related to the hazard analysis associated with Appendix Q of RR13. Hole size for hazard analysis was reviewed with FERC's preference to be consistent with DOT's upcoming determination. Alaska LNG project can, however, go forward with current proposed hole size and FERC will advise if there are any issues. WRT overpressure analysis, project needs to document why analysis to be used is conservative. |  |  |

11-16-15 AKLNG Project: ADNR Water Pre-application Meeting Notes and Checklist

issuance followed by certificate issuance after beneficial use is established)
 Will require AKLNG to apply for water right and not their contractor

- **Temporary Water Use Authorization** (TWUA) Temporary in nature (typically construction related); five years maximum per authorization, including one-time extension allowed. Can be reapplied for if temporary use needed beyond five years. Authorization is required to divert, impound, withdraw, or use a "significant amount of water." Up to five separate sources per application/authorization. No priority date associated with a TWUA.
  - Review Process =
    - Application reviewed (adjudicator) timeline varies but applicant required to apply minimum of 60-days prior to start of use or construction of works for water use
    - Agency notice (ADEC & ADF&G required to be notified
    - Drafting of review/determination document and TWUA
    - Issuance
  - Hydrologic Unit Map-1987 TWUA authorization needed for each Cataloging Unit, approximately 16, to dewater (near surface groundwater from the unconfined water table aquifer) newly trenched/excavation areas during construction (separate TWUA authorization required for dewatering standing surface water in material sites and for crossings of water bodies or streams involving a diversion, withdrawal, impoundment or use of a "significant amount of water").
  - Surface Water or Confined Aquifer TWUA required for any other water needs (divert, impound, withdraw, or use) from water bodies, ponds, lakes, streams, rivers, confined aquifers, or ice above the "significant amount of water" threshold for field studies, construction or maintenance activities of a temporary nature. TWUA is needed to impound, withdraw or divert a "significant amount of water" even if not for a specific water use purpose.
  - Water stored to sample water quality prior to discharging may require a TWUA depending on volumes and contact with potential contaminant sources.
  - Submit application at least 60 days prior to construction.

#### • Changes of Use:

- Obtain prior approval from DNR Water Section before change acquired (via land purchase) water rights to AKLNG uses (see 11 AAC 93.930)
- May relinquish acquired water rights at the same time submit new AKLNG use application, which will increase unappropriated water Available for appropriation.

#### • General Info:

- Metering data is generally public information. AKLNG may request information from DNR Water.
- Metering or tracking water use may be a requirement of water rights/authorizations and the Project may be required to submit monthly/quarterly/annual report(s).

11-16-15 AKLNG Project: ADNR Water Pre-application Meeting Notes and Checklist

## DNR Water Checklist of Core Information:

The minimum items currently required for an Application for Water Right to be deemed substantially complete for acceptance of said application are as follows:

- Application fee.
- Type of water source identified ground or surface water.
- Location of water source identified.
- Location of water use area identified.
- Total amount of water request identified.
- Type of water use identified.
- Months of water use identified.
- Original signature of applicant on the application form required.
- Evidence that the applicant has a present possessory interest in the property where the water is to be beneficially used (copy of deed, patent, license, lease, mining location certificate, or other instrument) or a copy of a completed application that has been filed with the appropriate agency to acquire permission for the use of federal, state, or municipal property.
- Legible map that includes MTRS (meridian, township, range, section) information, such as a subdivision plat, USGS Topo or borough tax parcel map, or Alaska Mapper map printout.

| 1    | KSH URA and Nikiski Growth<br>Projections | John Linnell explained a meeting with FHWA needs to happen because they are a funding partner<br>and may need to bring in other national resources. Mark will call Elizabeth Hoffman once John Linnell<br>has reached out to her to initiate the discussion and to set up a meeting with FHWA, DOT&PF and<br>project staff. HDR will revise the growth rate and re-circulate the numbers for input. Jennifer said she<br>would reach out again to Max Best (at the KPB) regarding possibly updating the numbers. |  |  |

| 1    | Alaska LNG (Project) will not<br>further pursue modeling<br>refinements to combine roof top<br>intercooler and turbine exhaust<br>plumes for GTP cumulative<br>modeling approach at this time. | At the proposed location, GTP must explicitly model two nearby facilities. These facilities have roof top intercoolers which are nearby and believed to increase the dispersion of turbine exhausts. There are several approaches to modeling the nearby facilities that could allow the intercooler effect to be incorporated. Before applying these approaches, the nature of the intercooler impacts on the turbine exhausts would need further technical delineation. That technical delineation would likely require more time to accomplish and gain agency acceptance than the Project's schedule would allow. The Project concluded that the intercooler refinements should not be further pursued at this time. |  |  |  |

| 1    | Bi-Weekly Meeting with DOT&PF<br>(KSH relocation)      | Discussed preparations needed for a meeting with FHWA. Determined that alignment on the agenda and meeting objectives is needed between Alaska LNG Project and DOT&PF before scheduling the meeting. DOT&PF would like to understand the project's position on URA and NEPA applicability before the meeting with FHWA. Give DOT&PF and opportunity to view URA and NEPA whitepapers. Provide DOT&PF with recently obtained growth scenarios from environmental team working on the FERC EIS for Alaska LNG project, make recommendation for a scenario to use in the TIA |  |  |  |
| 2    | Revised look at traffic projections for KSH Relocation | HDR provided more information on the traffic projections for the feasibility report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |

| 1    | HIA status update for 2nd Draft<br>RR5, Subsistence issues, and<br>Resource Report schedule | Mark Morones, Large Project Coordinator - State of Alaska Department of Natural Resources, called to speak about the Health Impact Assessment being conducted for the Alaska LNG Project and how DHSS and their contractor NewFields can assist in providing an update on the status of the HIA for the 2nd Draft RR5. Alaska LNG would like to include an update on the status of the HIA, including a summary of the work conducted in 2015 and what will be conducted in 2016. Project would also like a brief summary (like a table of contents) of what the final HIA will contain when completed later in 2016. Mr. Morones appreciated the clarification. We also discussed possibly accessing Traditional Knowledge information that was collected for the Susitna-Watana Hydro Project. TK collected from several communities for the Susitna-Watana Project would be useful for the Alaska LNG Project. I explained that we would like to understand the process for obtaining the necessary information so we can make a determination as to whether or not it is reasonable to do so. Mr. Morones said he would make some inquiries and get back to me. Finally, Mr. Morones indicated that DHSS and NewFields would like to participate in Alaska LNG meetings that pertain to subsistence. Subsistence is a major issue with regard to health and nutrition, particularly in rural communities. DHSS would appreciate being briefed on the ongoing subsistence activities and findings for Alaska LNG. |  |  |

| Item | Agenda Item(s)                                                                                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
| 1    | EPA Region 10 Concurrence<br>Support Requested for EBD<br>Analysis and Other Elements of<br>the Alaska LNG NEPA Air<br>Modeling Protocol | Meeting was prompted by retirement of Region 10 resource working NEPA air modeling protocol issues for the Alaska LNG Project. EPA R10 staff working on the project were provided an overview of the project relevant for air impacts, and the Project's November 2015 request for concurrence on several modeling issues was discussed. EPA representatives indicated that concurrence/approval of the November request was not necessary for the Project to move forward with modeling, robust justification of approach is needed in the modeling protocol. Agency participants were provided background on how the AERMOD Building Profile Input Program (BPIP) fails to adequately represent complex industrial facilities such as the existing Prudhoe Bay gas plants, and how the BPIP shortcomings can be empirically demonstrated and corrected through use of wind tunnel studies that determine a more appropriate Effective Building Dimensions (EBD) for these gas plants. |  |  |

| Item | Agenda Item(s)                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 1    | Project Update                                                    | The southern 400 miles of the pipeline route was the focus in 2015 and AGDC conducted the borehole program. No big surprises were encountered. A projection of regional warming will be done to account for permafrost impacts. Importing pipe into the United States was briefly discussed. The 48 inch diameter pipeline case continues to be studied. Full scale pipe testing is 80% complete and weld procedures for SBD pipe are underway. ASAP and AKLNG routes are quite coincident. |  |  |
| 2    | Summary of 2015 PHMSA<br>Engagement inIcluding schedule<br>review | Highlights of the 2015 engagements between Alaska LNG and PHMSA were reviewed by Alaska LNG. Alaska LNG noted that PHMSA has been helpful in providing other contacts to help Alaska LNG gather further information and data. Double joint fabrication has been identified as start of construction. The Project mentioned the need to stay on schedule, including keeping permitting on schedule in order to manage costs.                                                                 |  |  |
| 3    | Special Permit Filing                                             | The number of potential special permits was discussed: one for SBD and the others potentially grouped together. PHMSA will take under advisement. SBD conditions were discussed with PHMSA identifying that global or regional warming is an important topic that requires further discussion in other meetings. Other SP's under consideration are: Crack Arrestor Spacing MLBV Spacing                                                                                                    |  |  |
| 4    | Other Technical Discussion                                        | Offshore Cover in Cook Inlet: Alaska LNG had previously requested through an RFI to PHMSA that Cook Inlet is classified as offshore. Due to the current in Cook Inlet, Alaska LNG proposes not to bury the pipeline across CI. PHMSA has not yet responded. Multi-layer coating: 3LPO and industry experience was discussed. There will be more discussion on coating options in 2016.                                                                                                      |  |  |

| 1    | Overview of Alaska LNG Winter 2015-16<br>Pipeline Geotechnical and Geophysical<br>Program | SHPO requested clarification on the number of boreholes to be drilled<br>and what is the diameter of the boreholes. Alaska LNG indicated that the<br>drill site icons on the Area of Interest figures in the submitted report each<br>equal a single borehole. |  |

|      |                                                                                                                                                                    | DISCUSSION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| 2    | Overview of Alaska LNG Cultural Resources<br>Inventory, Assessment, and Monitoring Plan<br>for the Winter 2015-16 Pipeline Geotechnical<br>and Geophysical Program | <ol> <li>SHPO noted the following items that need to be revised in the Plan:         <ol> <li>Need to be clear that if a potential resource is found in the field, work will stop and SHPO and other responsible parties will be consulted via phone and/or email regarding the significance of the site. Work would only resume upon an affirmative statement from SHPO. Email communications would be preferred so photos, etc. could be transmitted, but it is understood that communications may be limited at some remote sites and mutually acceptable workarounds will be managed as appropriate.</li> </ol> </li> <li>Plan needs to include a description of the challenges faced by the archaeologist doing inventory surveys in the winter and potential limitations.</li> <li>SHPO contact information needs to be updated if resources are found.</li> </ol> |  |
| 3    | Overview of Alaska LNG Cultural Resources<br>Inventory, Assessment, and Monitoring Plan<br>for the Winter 2015-16 Pipeline Geotechnical<br>and Geophysical Program | SHPO requested clarification regarding the identification of access routes. Access routes are identified on the figures in the Plan and will be ground-truthed, but are subject to modification in the field. Access routes as shown avoid existing cultural sites.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 4    | Overview of Alaska LNG Cultural Resources<br>Inventory, Assessment, and Monitoring Plan<br>for the Winter 2015-16 Pipeline Geotechnical<br>and Geophysical Program | SHPO asked about land ownership and Alaska LNG provided a list of the land owners across all the Areas of Interest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 5    | Overview of Alaska LNG Cultural Resources<br>Inventory, Assessment, and Monitoring Plan<br>for the Winter 2015-16 Pipeline Geotechnical<br>and Geophysical Program | SHPO asked if snow cover requirements will be factored into travel activities – suggesting that the on State properties overland travel restricted to periods with >12 inches of snow. Alaska LNG said they expected the above mentioned snow travel restrictions to apply, and to be able to fully comply with such conditions. However the Project has yet to receive relevant permits to confirm related conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 6    | Discuss SHPO Concurrence with finding of<br>"No Historic Properties Affected"                                                                                      | SHPO recommended that a conditional finding of No Adverse Effect<br>Historic Properties would be more appropriate under the requirement<br>the National Historic Preservation Act. Once the Plan is revised, Al<br>LNG can request concurrence of this finding. In response to Alaska<br>questions, SPCS indicated that finding should be sufficient for perm<br>/ consultation requirements but will verify.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

|                                                                                                                                                        | MEETING DETAILS  |                    |                                         |  |  |

| 1    | PHMSA Engagement and FERC<br>Filing Process                             | PHMSA inquired regarding FERC's awareness of PHMSA's RR requirements regarding SP's                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 2    | Strain Demand Methodology and potential SP makeup                       | PHMSA requires that the environmental information for the Special Permit be in the FERC RR's. MLVB and CA spacing requirements were discussed wrt CFR 192 requirements and risk mitigation. CA spacing adjustment near existing infrastructure to be included. Conditions and environmental information for pipeline coating should be handled separately from MLVB and CA spacing information. PHMSA can provide examples of SPA (special permit applications). PHMSA indicated the EI's would be stand alone documents. The PHMSA Environmental Assessment (EA) needs to state pro's and con's and what are the risks. The EA needs to convey the four key components for an EA: Purpose and Need, background and site description, alternatives and environmental impacts of the proposed actions and alternatives. Information must be available to the public. |  |  |
| 3    | Strain Demand Methodology -<br>Arctic Pipeline Design<br>Considerations | PHMSA inquired about more background on terrain mapping-how vegetation can provide information on<br>underlying soils. Frost heave was discussed with PHMSA requesting a meeting with key agencies to review<br>Strain Based (SBD) once the SBD MP's have been established. The Project identified that pipe in regions near<br>the NS will not be SBD because that pipe will be operated in permafrost regions below freezing. Continuous<br>permafrost ends around MP 180. Most important factors are construction clearing and pipe temperature with<br>the later impacting 10's of feet while the former can extend over 100 feet in width.                                                                                                                                                                                                                     |  |  |
| 4    | Additonal Items                                                         | Offshore cover requirements - request for interpretation. Still awaiting signature. PHMSA confirmed they do not have a defined process for reviewing 'new and novel' technology but would be open to hear industry best practice                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |

| 1    | Meeting with Alaska Energy<br>Authority to Discuss Acquisition of<br>TK Data | On Tuesday February 9, 2016, Mark Jennings and Lisa Gray of the Alaska LNG project met with Betsy McGregor of the Alaska Energy Authority (AEA) and Marie Steele and Mark Morones of the Department of Natural Resources (DNR) to discuss a process for obtaining traditional knowledge (TK) information recently collected for the Susitna-Watana Hydroelectric Project. The meeting was arranged at Mark Jennings request by Mark Morones and was held at the DNR offices in Anchorage. The AEA is currently engaged in environmental studies for the Susitna-Watana Hydroelectric Project in interior Alaska. FERC is the lead federal agency for that project. The Alaska LNG Project has identified three communities for TK data collection that overlap with communities previously surveyed by the Susitna-Watana Hydroelectric Project. The communities are Cantwell, Eklutna and Tyonek. The TK data collected by the Susitna-Watana Hydroelectric Project is directly applicable to the Alaska LNG Project. In order to help minimize duplication of effort in those communities, the Alaska LNG Project wishes to acquire/share the TK data previously collected for those three communities. After describing the Alaska LNG Project needs for the TK data, Ms. McGregor outlined a process to solicit the information needed and the purpose. She said to be as descriptive as possible in describing the data needed. Ms. McGregor indicated that the process is fairly simple and straightforward. She asked that we copy Shannon Miller (SPCO) and Marie Steele on the request. |  |  |

# PHMSA Technical Engagement Meeting, 15 March 2016

### Administrative Items

|       | SN: Alaska LNG to provide agenda. PHMSA would like to see what the MP designations are. [RN to follow-up with SN on whether he is willing to present SBD SP Conditions ]. SN still waiting to hear more about the Design Change Process from Amelia. May make it a Condition instead of an Appendix. SN has talked to Amelia about concept.                                                                                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | SN: At meeting with FERC, would like Alaska LNG to go through how we are selecting SBD area, or not, and what we would perform during construction. Where have we taken samples, what have been the results, etc? Would hope that the ACOE and CRELL personnel (Kevin ?) out of Fairbanks (Mary Romerio, Sandy Gibson with ACOE). PHMSA wants feedback from other agencies. SN: PHMSA ok with a staged approach – FERC/PHMSA prior to 2 <sup>nd</sup> DRAFT of RRs, followed by other agencies after filing 2 <sup>nd</sup> DRAFT.                                                                                                                                   |
| 12-13 | SN and RG: can meet at PHMSA offices in Anchorage. Have room for up to 30 people.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|       | SN: can set something up, but may need to change it. In Anchorage starting the 17/18 of April, can meet before the 20 <sup>th</sup> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|       | SN: no word on Offshore Cover RFI. Put in for SP if we do not have a response on RFI [follow-up with Steve on this]. PHMSA legal is looking at it. RG: agrees that it is Offshore and this is what other operators have done. RG: agree that it was good to file the Offshore Cover RFI.                                                                                                                                                                                                                                                                                                                                                                             |
|       | RN: Can PHMSA provide us with Kinder Morgan's recent SPA filing? SN: Kinder Morgan SPA that PHMSA suggests we follow is publically available. Docket number: regulations.gov PHMSA 2016-0004, -0006, -0007, -0008 (In Federal Register as well, comes in March 24).                                                                                                                                                                                                                                                                                                                                                                                                  |
|       | SBD SP Conditions: Next Steps                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|       | <ul> <li>Discuss Design Change Process: Enclosure B</li> <li>added 1) b) v. "any required environmental reviews and permits"</li> <li>change of language in 3) would require "procedures including any additional special permit notices and environmental assessments"</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                   |
|       | SN: what would we do if strain was experienced in a non-SBD segment? MM: removing and replacing the pipe would be a last resort. Can use thermo siphons, dig up and relieve strain demand, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 14-16 | SN: what are we going to do in the continuous permafrost area? Other agencies are convinced there will be a water canal in this area. What do we see the effects of climate change as well? Doesn't this need to be included in SBD MPs as well? MM: multiple considerations with preparing the ROW to prevent what SN is describing. In continuous permafrost, if ice rich soil is dug up, then will likely need to bring in imported fill (e.g. gravel), so that it will not melt and cause a water trench. Part of Construction and Execution Plan. A bigger issue can be work pad for vehicles. MM: have also looked at how much imported fill will be required. |
|       | SN: will Section 5 be inspected? RN: yes, but not using SBD SP O&M conditions. MM: launchers and receivers are at compressor and heater stations. SN: other agencies will want the North Slope sections inspected for strain demand. AC: all launchers and receivers have the same design and can run the full suite of tools.                                                                                                                                                                                                                                                                                                                                       |
|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

# PHMSA Technical Engagement Meeting, 15 March 2016

#### MLBV Spacing Special Permit

17-27

Slide 20: Ask "Any issues with the proposed siting of MLBVs? RG: a MLBV at the Yukon river? AC: no, this is an HDD, that is about 1,000 ft in length.

SN: difference with ASV vs. RCV? RN and AC: RCV has power and communication. Can be remotely closed, but not opened. Pressure detection upstream and downstream of valve. ASV uses only low pressure set point. SN: at MP 36.91, why not an RCV? AC: not easily powered. ASV are placed where there is poor access, or where there may be a future facility. At future build can change from ASV to RCV. Comply with CFR 192. SN: MP of Yukon river? AC: 357?

#### SN: would like to have this information overlaid on map, with key highlights: e.g. Yukon river, Fairbanks, TAPS and its crossings, and how we selected these MLBV sites. 3-5 slides so that SN can send in internally within PHMSA.

RG: what about the laterals? AC: we will have a sectionalizing valve at each lateral, but because we don't know where they will be sited, we don't have additional details. MM: not part of our basis, but we can look at this. SN: this is how SN installed these in years before.

[Slide 22, what is pressure rate of change at MP 0 and 100? Is this higher than 6%?]

BL: what happens if you use less than MAOP as your assumption? RN: good point, we will have to look at that in subsequent analyses.

### Rupture and Thermal Radiation Analysis IPC16 Publication

28-29 Does PHMSA take any exception to the approach presented on this slide? SN: no. Would be in our best interest if we can post it on the Internet. MM: **suggest we work to push the Copyright limit**.

### RN to provide IPC16 paper to PHMSA

#### Crack Arrestor Spacing Special Permit

SN: was the gas composition used in the determination of arrest energy? MP: yes, used project gas composition, Battelle two-curve method, and Leis correction factor. SN: did you use EMC<sup>2</sup> correction factor? MP: used Leis factor from Battelle, which is published and quite conservative. SN: in about 2007-2008 EMC<sup>2</sup> performed some research based on correction methodology based on grade and composition. MP: will look more into this, but it is not likely to change the outcome of the fracture propagation analysis since there are no borderline cases.

30-44RN: how do we demonstrate low probability of rupture to FERC? SN: start with qualitative approach like we<br/>have already presented to PHMSA. Look at Kinder Morgan Rockies Express pipeline filings. About 1700-<br/>1900 psi range (also look at Alliance pipeline). Remembers 160-180 CVN values in their FERC submission.

Slide 38: what are the bridges of concern to PHMSA? SN: who did we talk to at ADOT? Is it a person with sufficient authority that it wouldn't come back to. For example, what is the replacement time for the bridge? BL: also look at traffic volumes across these bridges. **RN to follow-up with ADOT**.

Slides 42-25 make sense, just add some additional commentary.

45-48Proximity to other infrastructure45-48No comments from PHMSA

# PHMSA Technical Engagement Meeting, 15 March 2016

| 49          | DNV GL Report out: next steps<br>SN: need to see the final draft before deciding what to do next. Would like to see a one or two page<br>summary of what is required for future project phases.                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                |                 |  |  |  |  |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-----------------|--|--|--|--|
|             | SN and MC: very good presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                |                 |  |  |  |  |
|             | Post meeting           SN: One thought is to pig the entire line using the SBD SP Conditions. RN: the entire line does meet AMAOP requirements for inspection. SN: ILI requirements are key. Highlight that we are complying with these requirements – include this in FERC RR11 overview. SN sending latest SBD SP Conditions to RN that he has sent to PHMSA Legal (Amelia Samaras).                                                                                                                                                                                                                                            |                                |                 |  |  |  |  |
|             | SN: what does BL think about multi-layer coating? BL think it is a good coar DNV GL report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ting. SN and BL a              | gree to wait on |  |  |  |  |
|             | BL: CP system – how do you isolate it to run surveys? RN shows 2 <sup>nd</sup> DRAFT FERC RR 11, section 11.6.3 addresses CP System. BL: don't see the hybrid design a lot in the lower 48. RN: how long is the construction activity? SN: Condition in the SBD SP that covers this.                                                                                                                                                                                                                                                                                                                                              |                                |                 |  |  |  |  |
|             | SN: would like to see other PHMSA comments to the MLBV and CA spacing SP before moving forward. ILI is Steve's chief concern.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                |                 |  |  |  |  |
|             | SN: should we add anything in App. B to cover what personnel should be involved on the North Slope? Look at the SBD SP Conditions that Steve provided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                |                 |  |  |  |  |
|             | SN: on the North Slope, need to provide more detail than MM provided – typical construction responses will not be sufficient to address this concern. RN: what is the specific area of concern with the first 30 miles or so? SN: this is what the other agency has identified (don't know why this length other than generally this is the area that doesn't recover). Do not need to meet with this other agency before filing the 2 <sup>nd</sup> DRAFT of FERC RRs, but need to lay out the facts on how this will be designed. If we can, <b>provide additional details on the other pipelines designed for this region.</b> |                                |                 |  |  |  |  |
|             | RN: where do you think we are with coatings? SN: want to see DNV GL report first. Then circulate package w/in PHMSA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                |                 |  |  |  |  |
| ACTIO       | DN ITEMS:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                |                 |  |  |  |  |

| ltem | Agenda Item(s)                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |
| 1    | Presentation                                  | Pranav Mehta described the scope of proposed dredging and dredged material disposal at the base case material offloading facility (MOF) and alternate MOF. Carrie Andrews described the sampling plan including scope, methods, and assignment of dredged material ranking.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |
| 2    | Disposal site jurisdiction                    | Chris Meade asked for confirmation of whether the disposal site was located in CWA or MPRSA jurisdictional waters, thereby determining US Army Corps or EPA jurisdiction. Claire confirmed that the currently proposed dredge disposal location is CWA / Corps jurisdiction. The proposed disposal location is immediately west of Nikiski, north of the jurisdiction division.                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |
| 3    | Test Pit Sediment<br>Characterization Results | Chris Meade asked about the results of the test pit site characterization (conducted by Alaska LNG Project in 4Q2015). Claire Joseph confirmed that the results would be provided as supporting information in the SAP for determination of dredged material ranking. Carrie Andrews noted that the justification for the dredged material ranking is described in the "Previous Investigation" section of the draft SAP. Chris said that although the test pit results would provide some information, that the distance between the test pit sampling sites and the capital dredge areas (Pranav confirmed ~1,000 ft for base case MOF and ~7,000 ft for alternate MOF) is large enough that the test pit data may not be considered "site specific" information. |  |  |  |
| 4    | Dispersion Modeling                           | Chris Meade asked whether there were plans for dispersion modeling at the dredge disposal area.<br>Claire Joseph said that the Project plans to do dispersion modeling to support Section 404/10<br>permitting but not for the FERC Application/Resource Reports. There was no objection to this plan.<br>Chris indicated that the dispersion analysis was used for the disposal site determination by the US<br>Army Corps of Engineers.                                                                                                                                                                                                                                                                                                                           |  |  |  |

| 5 | Proposed Disposal Site                | Chris Meade asked whether the Project had considered a disposal site located to the west of the existing site, in deeper water. Chris also inquired about the availability of site specific water current data. Pranav Mehta and Claire Joseph explained that this site was selected based on water depth, currents, and vessel traffic data. Additionally, Billy Oliver pointed out that the disposal site needs to be within a reasonable distance of the dredged area or the operation has the potential to increase vessel traffic and interactions with other vessel activity. Chris Meade said he would be interested in seeing the vessel traffic (AIS) data to understand why the Project team is not proposing to move the disposal site further west into even deeper water. Pranav Mehta noted the availability of current data from seabed frames in the vicinity, but that no data was available in the disposal target area footprint. He also noted the use of the project's (fairly sophisticated) current model to guide selection of the location. |
|---|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6 | Upland Placement                      | Jim Rypkema asked whether the Project considered upland placement of dredged material. Claire<br>Joseph explained that upland placement was considered, however the large land area which would<br>be required to accommodate the material, the fact that the dredge material is marine sediment<br>coupled with the use of groundwater by others in the area, and the logistics and cost associated with<br>upland placement were factors leading to it being eliminated from consideration as the "preferred<br>alternative." Claire Joseph said that information on dredging methods and disposal alternatives will<br>be included in the Resource Reports.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 7 | Persistence of Contaminated Sediments | Billy Oliver asked the group whether there were any examples in Cook Inlet where dredged contaminated sediments have been known and/or documented to be persistent over time. No known circumstances were raised in the meeting. It was discussed that there might be information available from the Cook Inlet Navigation Channel dredging conducted by the Corps of Engineers for the Port of Anchorage. Sandy Gibson said she would check whether information might be available on this subject.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 8 | References used for permitting        | Chris Meade asked for confirmation of the references that the Project was using for development of the SAP and dredging planning. Carrie Andrews confirmed that the Project was using the US Army Corps Users' Manual (Dredge Material Management Program's Dredge Material Evaluation and Disposal Procedures) and the EPA/Corps Inland Testing Manual (Evaluation of Dredged Material Proposed for Discharge in Waters of the U.S. Testing Manual).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 9 | Next Steps                            | Claire Joseph said that the Project plans to transmit the Draft SAP to agency representatives the week of 3/21 and would please request response back from the agencies during the week of 4/4. Claire said that the Project planned to begin data collection around 4/18. Chris Meade said that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1    | 2015/2016 IHA                                                         | Sara Young said that NMFS General Counsel have reviewed the memo that would be added to the administrative record regarding use of passive acoustic monitoring for conducting vibracoring in darkness to enable work under 2015/2016 IHA. Sara Young will be meeting with Jolie Harrison tomorrow (4/1/16) to determine whether or not they would put a memo to the record, or process a minor amendment to the 2015/2016 IHA. The amendment to the IHA is not typical. Either option (memo to record or minor amendment to IHA) would not require a public comment period. Sara Young expects documentation to be available to provide to EMALL early to mid next week (Tuesday or Wednesday). The group discussed that the vibracoring work could still be conducted under the 2015/2016 IHA, just not in darkness with PAM.                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
| 2    | NWP6 Verification update for<br>revised BiOp/ITS for 2015/2016<br>IHA | Claire Joseph asked Judy Jacobs whether the NWP6 verification from 2015 should be updated to incorporated the revised BiOp. Claire mentioned that Mary Romero issued a revised NWP6 since the BiOp/ITS requirements were added to the NWP6 verification as specific requirements (i.e. added as body text rather than just referenced). Judy Jacobs said she'd check with Sandy Gibson regarding issuance of a revised NWP6 verification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 3    | 2016 IHA and Section 7 ESA<br>Consultation                            | Claire explained the reason that EMALL provided updated Project description information: it was to more accurately reflect the new planned scope of work (which is same equipment, survey areas, and timing as originally proposed, just a reduced total scope). Sara Young said that it will take more time to update the 2016 IHA since the scope has been reduced. Sara Young said that indeed the reduced scope would make the 2016 IHA less controversial. Claire Joseph asked whether it would be possible to obtain the 2016 IHA by end of April 2016 to enable vibracoring to begin in May. Sara Young said that she thought that would be possible. Sara Young said that since the 2016 IHA will not include takes for vibracores and since the 2016 IHA will replace the 2015/2016 IHA as soon as it is issued, that EMALL will be able to continue vibracoring (those activities just won't be covered under the 2016 IHA). Judy Jacobs said that she is currently working on updating take estimations, and that it may be that the Section 7 ESA consultation results in a Not Likely to Adversely Affect (NLAA), in which case NMFS-PR1 would communicate that to NMFS-AKR, and NMFS-AKR would issue a letter of concurrence (therefore no BiOp required). |  |  |
| 4    | Passive Acoustic Monitoring -<br>equipment and procedures             | Sara Young and Judy Jacobs each acknowledged receipt of the PAM equipment and procedures.<br>They provided the information to their acoustical experts and will provide responses back to EMALL.<br>Initial feedback suggested that the equipment should be farther away from the vessel. Billy Oliver said<br>he'd communicate that back to the team. Judy Jacobs said that she would follow-up with the<br>acoustical experts to ensure that they understand that the purpose of the PAM for this particular scope<br>of work (i.e. not to detect belugas during vibracore operations, but rather than before and after). Sara<br>Young mentioned that one person had suggested hydrophones on a buoy, however Billy Oliver<br>mentioned that the concern about managing the buoy in the tides and currents.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

| Slide<br>#<br>1-5<br>6-9<br>10-13 | Notes         Introductions, Safety Moment and Overview<br>No comments         Summary of Previous ADOT&PF Discussions and Purpose for this Meeting<br>No comments         CFR 192 Requirements for Transportation Infrastructure<br>ADOT&PF drew comparisons between allowable stress design and strain-based design for bridges that are<br>analogous to ASD and SBD for pipelines. RN explains that ASD is for pressure containment, and is always<br>present, while SBD is for axial loads that may or may not occur. The other difference is that ASD utilizes a<br>fraction of the specified minimum yield stress (ADOT&PF commented that this is analogous to nominal<br>strength for bridges), while SBD utilizes a fraction of strain, which is limited to a maximum of 2% per the SBD<br>Special Permit.         ADOT&PF also asked about the type of API 5L pipe and how we ensured sufficient ductility with X70 and |                                               |                                            |                              |                                                                     |

# PHMSA Technical Engagement Meeting, 1 April 2016

|       | Thermal Radiation Study<br>ADOT&PF asked with the main line block valve spacing is 20 miles in CFR 192 for Class 1 locations. RG<br>stated that he wasn't sure of the history. RN provided background on how CFR 192 was derived from a late<br>1960s version of ASME B 31.8. The 2014 Editions of ASME B31.8 requires that an engineering assessment<br>be performed to determine the spacing between valves, which we have performed for our Mainline.<br>However, in lieu of such a study, B 31.8 (2014) does default to the same valve spacings that are in CFR<br>192.179.                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14-17 | Slide 17: EM: why is the dosage so similar with the 20 and 50 miles spacing when there appears to be a significant difference in the total outflow results for these two spacings? Is dosage more directly related to area under the total outflow curve? AC outlined how dosage is a multi-dimension factor accounting for time, and heat flux as a given position; which are in turn impacted by outflow rates as well. Brief answer to EM's question was: despite a given area being exposed to larger heat fluxes for a time period in the 50 mile spacing case, the predominant amount of heat released from a rupture is done so in the time frame when all spacing options behave identically, and therefore the additional heat flux accumulated for the longer spacing case is marginal. Additionally noting the marginal additional heat is more present immediately adjacent the pipeline.                                                                                                      |
|       | <b>Results of Proximity Analysis</b><br>EM: Is there any other state or code that defines proximity criteria for bridges that would provide guidelines<br>on thermal radiation, or dosage limits? RN: we have not been able to find any such guidelines for bridges in<br>the CFR. We have also inquired of our Risk/Loss Prevention professionals and they are not aware of any<br>such defined limits. We have also talked to PHMSA about this matter, and they recommended we speak to<br>ADOT&PF. Is ADOT&PF aware of any such limits? ADOT&PF: no.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|       | ADOT&PF note that the Dalton and Parks highways are not practically redundant – meaning there are no practical alternate routes should a major bridge be damaged, or become unusable. EM highlights that there are certain bridges that would be more susceptible to thermal radiation: e.g. glued laminated timber bridges and truss bridges. He notes that Nenana River at Moody Bridge is steel truss, and would be difficult to replace given its size and location [891 ft long]. He notes that we have a pipeline aerial crossing that is within 238 ft of this bridge.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 18-23 | The discussion explores options for reducing consequence when in proximity of bridges – e.g. building a berm. RN highlights that the vast majority of our river crossings that are within a PIR proximity of a bridge are buried, only three are aerial crossings on a bridge whose sole use is supporting the pipeline. AC provides details on our river crossing methods: the vast majority of the crossings will be open cut, horizontal bore or HDD, in which the pipeline is buried. RN notes that Risk = Probability x Consequence. The consequence (thermal radiation and dosage) is related to distance, however, in several key areas (e.g. Nenana Canyon) the pipeline route is constrained by geography, therefore we take measures in the pipeline design to reduce probability of rupture: e.g. more robust pipe with lower grade and thicker wall, placing the pipeline on its own bridge, as opposed to co-locating on a roadway bridge (e.g. TAPS and the proposal for the ASAP pipeline). |
|       | EM: could a firearm cause a rupture? RN: testing performed by ExxonMobil has shown that 0.5" thick grade X65 pipe is sufficient to prevent penetration of typical hunting firearm cartridges used in Alaska. However, even if the pipeline were punctured, it would result in a leak, not a rupture. The critical length to cause a rupture is >5 inches (see Fracture Control results on Slides 12 and 13.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

# PHMSA Technical Engagement Meeting, 1 April 2016

#### Discussion

|             | Discussion<br>EM: seems we are saying that bridge damage is the same whether we follow CFR 192 or grant the Special<br>Permit. RN: correct.                                                                                                                                                                                                                                                                       |  |  |  |  |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
|             | DB: appears that the best solution would be to move the pipeline away from the bridges, but likely may not be possible in some areas (e.g. due to terrain).                                                                                                                                                                                                                                                       |  |  |  |  |
| 24-25       | ADOT&PF commits to providing a list of prioritzed bridges of concern within two weeks (15 April) to<br>RN, JR and PHMSA.<br>ADOT&PF did not have any further suggestions on what mitigation measures (Conditions) to be taken when<br>in proximity to briges. They deferred to PHMSA.<br>RN to follow-up with PHMSA when in Anchorage (18 and 19 April) to further progress MLBV and CA<br>Spacing SP Conditions. |  |  |  |  |
| 26-27       | Closing and Back-up<br>No comments                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |

| ltem        | Agenda Item(s) / Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Comments |  |  |  |
|             | The APT Program Information was presented by Jeff Raun and Billy Oliver.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |  |  |  |
|             | Jennifer Murrell asked that during water quality testing that arsenic is captured. Billy verified that arsenic will be one of the parameters captured in the water quality study.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |  |  |  |
|             | Melissa Hill asked if there was a plan to convert any of the APT wells into permanent wells. The team explained that at this point in time it was not the intent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |  |  |  |
|             | Melissa Hill commented that keeping APT wells and observation wells in place allows monitoring of the influence of both APT tests. She indicated that there is known interconnection between the first two aquifers. She further indicated that others have found that short duration and laterally limited pump tests have not provided sufficient project information regarding potential influence due to pumping. Billy welcomed the comments and also added that this was one of the reasons that wells in the first and second aquifers would be monitored simultaneously during both pumping tests. Billy further indicated that we were also aware of the interconnected nature of the aquifers and would be conducting pumping from two wells at the same time to aid in assessing impacts due to drawdown. |          |  |  |  |
| 3<br>&<br>4 | Gerry Brown inquired about the infiltration capacity of the quarry. Jeriann Alexander explained that several borings were drilled in the vicinity of the quarry and that geotechnical data has been acquired. Additionally there is operational input from the previous quarry owner indicating ponding did not occur during quarry operations. Gerry agreed that new infiltration tests at the quarry would not be necessary if capacity is demonstrated and suggested supplying the existing information for plan review.                                                                                                                                                                                                                                                                                          |          |  |  |  |
|             | Gerry also asked that the Project identify the wetland on the northeast side of the quarry and provide information to show that in the unlikely case the discharge in the quarry overflows, the discharged water would not go back into the wetland. He asked that the Project provide contour lines of the project area within a 0.5-mile radius of the aquifer pump testing.                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |  |  |  |
|             | Henry Brooks and Gerry Brown recommended that the Project seek approval for an overestimate of water usage to avoid having to amend the permit should circumstances change in the field; exceeding the authorized water usage volume would require permit modification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |  |  |  |
|             | Henry Brooks indicated that TWUA's are limited to Agency review only unless there is a specific request for public review. Henry asked for feedback if there are specific information requests at the upcoming community coffee session in Kenai.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |  |  |  |
|             | Henry Brooks requested information from the Project team about what lands Alaska LNG LLC has acquired in the area so that he can align his TWUA review with existing rights holders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |  |  |  |
|             | Melissa Hill expressed interest in the wells after the APT is complete and explained ADNR plans to seek additional funding from the U.S. Geologic Survey to maintain wells. Jeff recognized this as an opportunity and explained that he would discuss with the appropriate people on the Project team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |  |  |  |

| 1    | Rev B or Rev C pipeline route for land status review | Claire called Earle Williams to inquire whether he would prefer to have access to Rev B project area data to begin a land status review (therefore needing to update the review once Rev C is available), or wait for Rev C project data to be available instead and do the land status review only once? Claire Joseph explained that the Rev C route may come available to BLM at the same time that the Resource Reports are published, which could be confusing to staff who are looking at two different versions of the Project area. Earle said that he would prefer that his staff only do a land status review once, if that can be accomplished. He said he thought that the Rev B vs. Rev C confusion can be managed, and that as soon as we're ready to provide the most final footprint (i.e. Rev C), then we can please transmit that to them and they'll pull land title/plats for that. |  |

| 1    | Web Mapper Overview        | Jason Knier provided a web mapper overview and demonstration to meeting participants. Several action items were flagged for follow-up by exp regarding agency/user access to different features of the web mapper.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 2    | BLM access to Project data | The group discussed options for BLM access to Project data for purposes of land status review,<br>Resource Reports, and permitting. BLM would prefer to have Project data loaded or accessible in<br>their own BLM internal GIS system. The group discussed 3 general options to do this: (1) transmittal<br>of shape files from Project to BLM outside of web mapper; (2) addition of a data download page on<br>the Project's agency web mapper site which would allow download of Project shape files by BLM staff<br>with access to web mapper; or (3) BLM streaming of Project data directly to their GIS<br>software/system. BLM staff indicated that the third option would be most preferable so that that the<br>BLM would have the most up-to-date Project data and also so that there would not be outdated files<br>on the BLM system. The group discussed that the same level of security currently applied for web<br>mapper could be applied for this third option. Claire said that she would follow up with the Project to<br>first seek approval to transfer this data to BLM, then initiate a more detailed discussion with the GIS<br>technical team in each organization (Project and BLM) and finally consider which other agencies<br>might need this information for their own work activities. |  |  |

|------|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s) / Notes                                              | Comments                                                                                                                                                  |  |  |
| 1    | Overview of General Permit and purpose                              | Discussed background for General Permit                                                                                                                   |  |  |
| 2    | Hybrid approach using discharge and disposal approvals              | ADEC explained the difference between<br>discharges to water and disposal to land.<br>Each require different review processes,<br>including Plan Reviews. |  |  |
| 3    | BMP Toolkit                                                         | BMP Toolkits will be developed by applicants<br>and provided to ADEC for approval if<br>appropriate.                                                      |  |  |
| 4    | Tiered approach for drilling fluids                                 | Drilling fluids will be regulated based on a tiered approach including Type A, B, and C fluids.                                                           |  |  |
| 5    | Mixing zones for excavation dewatering and HDD inadvertent releases | These apply to open cut crossings. ADEC reviewed the mixing zone requirements and required information.                                                   |  |  |
| 6    | Other typical discharges and disposals                              | Discharges and disposals include gravel pit dewatering, hydrostatic test water, mobile spill response, and secondary containment.                         |  |  |
| 7    | Domestic wastewater discharges, including Plan Reviews              | Plan Review Approvals are required before authorization under the GP.                                                                                     |  |  |

27-Apr-16

|      | DISCUSSION                                                                       |                                                                                                                                                                                                             |  |  |
|------|----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s) / Notes                                                           | Comments                                                                                                                                                                                                    |  |  |
| 8    | Nondomestic Plan Reviews                                                         | Plan Review Approvals will be required for BMP Tool Kits for discharges and disposals.                                                                                                                      |  |  |
| 9    | Stormwater Discharges and Storm Water Pollution Prevention Plans and BMP Toolkit | Stormwater discharges can have an oil and gas exemption.                                                                                                                                                    |  |  |
| 10   | Notice of Intent and Authorizations                                              | ADEC anticipates needing to issue long-term<br>authorizations. Also, revisions are anticipated<br>by segment and season so applicants will<br>need to work with ADEC to ensure changes<br>are communicated. |  |  |

| Sub-Project Name | Alaska LNG Project                                    | Date of Meeting | April 27, 2016                     |  |
| Meeting Subject  | MOM – Bald and Golden Eagle Protection Act Permitting | Location        | USFWS Office,<br>Anchorage, Alaska |  |

| ATTENDEES   |              |             |                    |  |
|-------------|--------------|-------------|--------------------|--|
| Attended By | Organization | Attended By | Organization       |  |
| Jordan Muir | USFWS        | Caryn Rea   | Alaska LNG Project |  |
| Erin Knoll  | USFWS        | Julie McKim | Alaska LNG Project |  |

|      | AGENDA ITEMS                                                                                                           |               |             |  |  |
|------|------------------------------------------------------------------------------------------------------------------------|---------------|-------------|--|--|
| Item | Agenda Item(s)                                                                                                         | Leader        | Time        |  |  |
| 1    | Meeting Objectives                                                                                                     | C Rea         | 10:00-10:05 |  |  |
| 2    | Overview of Alaska LNG Project                                                                                         | C Rea/J McKim | 10:05-10:10 |  |  |
| 3    | Identify Proposed Field Work for 2016 Summer Season                                                                    | C Rea/J McKim | 10:10-10:20 |  |  |
| 4    | Review Alaska LNG Maps of Bald & Golden Eagle Nests <ul> <li>Availability of Raptor data collected in DNPP?</li> </ul> | C Rea         | 10:20-10:40 |  |  |
| 5    | Process for BGEPA Permit                                                                                               | Jordan        | 10:40-10:55 |  |  |
| 6    | Other Topics                                                                                                           |               | 10:55-11:00 |  |  |

|      | ACTION ITEMS                                                                                |                       |  |  |  |
|------|---------------------------------------------------------------------------------------------|-----------------------|--|--|--|
| Item | Item Action Items/Topics Assigned To                                                        |                       |  |  |  |
| 1    | Resend webmapper login information to Jordan and Erin                                       | C Rea                 |  |  |  |
| 2    | Formal request for webmapper data files                                                     | Jordan/Erin           |  |  |  |
| 3    | Send and Review of previous Best Management Practices document                              | C Rea and Jordan/Erin |  |  |  |
| 4    | Send raptor reports to Jordan and Erin                                                      | C Rea                 |  |  |  |
| 5    | Updated permitting plan to Jordan/Erin for review                                           | Julie                 |  |  |  |
| 6    | Ask if the resource equivalency analysis document or guidance can be shared with Alaska LNG | Jordan                |  |  |  |

|      | DISCUSSION                                                                     |          |  |  |
|------|--------------------------------------------------------------------------------|----------|--|--|
| Item | Agenda Item(s) / Notes                                                         | Comments |  |  |
| 1    | Overview of Alaska LNG Project<br>including project facilities and<br>schedule |          |  |  |
| 2    | Proposed Field Work for 2016<br>Summer Season                                  |          |  |  |

|      | DISCUSSION                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
|------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s) / Notes                          | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 3    | Alaska LNG Maps of Bald & Golden<br>Eagle Nests | USFWS would like to be able to pull the data files from webmapper for the location of nests, distance, species, and coordinates.                                                                                                                                                                                                                                                                                                                      |  |  |
| 4    | Alaska LNG Maps of Bald & Golden<br>Eagle Nests | USFWS has access to the NPS data for DNPP. USFWS can review the Resource Reports and our data to make sure we have everything we need. USFWS needs occupancy and productivity thresholds to help quantify what they can authorize and to determine the appropriate compensatory mitigation.                                                                                                                                                           |  |  |
| 5    | Alaska LNG Maps of Bald & Golden<br>Eagle Nests | USFWS suggested that late June is the time to survey in the southern areas and late July for the northern areas.                                                                                                                                                                                                                                                                                                                                      |  |  |
| 6    | Process for BGEPA Permit                        | Only takes for golden eagles or nests require compensatory mitigation. The compensatory mitigation must be quantifiable and scientifically supportable. Examples include power pole retrofits to meet the APLIC standards, road kill removal, and lead abatement. USFWS completes a resource equivalency analysis to determine compensatory mitigation requirements. For example, number of golden eagle takes equals number of power pole retrofits. |  |  |
| 7    | Process for BGEPA Permit                        | USFWS is currently allowed to authorize up to 550 bald eagle takes in Alaska. A<br>½-mile buffer is required for all blasting activities near bald eagle nests.                                                                                                                                                                                                                                                                                       |  |  |
| 8    | Process for BGEPA Permit                        | BGEPA permitting regulations are being revised. USFWS plans to eliminate language regarding "programmatic" permits. The regulations will require pre-<br>construction and during construction monitoring. The regulations also could change the duration for permits to a shorter time period.                                                                                                                                                        |  |  |
| 9    | Process for BGEPA Permit                        | USFWS advised that the Project wait to submit an application until the end of 2016 once the regulations are promulgated. USFWS advised that a standard permit would be the most appropriate permit for the Project. With the application, a fee is required and a description of avoidance, minimization, mitigation standards, and why a take cannot be avoided.                                                                                     |  |  |
| 10   | Process for BGEPA Permit                        | Once an application is submitted, USFWS will review it and issue the required permits. Pre-construction surveys would occur in approximately April 2018. Because pre-construction surveys may show that nest locations, etc. have changed since the permit was originally issued, the Project would submit a request for a permit amendment. USFWS will issue the permit amendment and work can begin in approximately June 2019.                     |  |  |
| 11   | Process for BGEPA Permit                        | USFWS will participate in the NEPA process as a cooperating agency and comment on the Resource Reports and EIS. USFWS does not rely on the EIS for their NEPA documentation and will instead issue an Environmental Action Statement, which is the equivalent of a Categorical Exclusion, unless the permit is controversial.                                                                                                                         |  |  |
| 12   | Other Topics                                    | USFWS asked about the Avian Protection Plan for the project. The document will be included as an appendix to RR3.                                                                                                                                                                                                                                                                                                                                     |  |  |

| 2           | <ul> <li>Alaska LNG (Project) Overview</li> <li>B. Trost asked whether data was potentially needed along pipeline corridor. J. Pfeiffer indicated that initial work using screening techniques suggested that new data collection was not likely needed.</li> <li>J. Pfeiffer indicated that the project was approaching completion of Pre-FEED or "investigate" and that decision whether to proceed with more expensive FEED remains to be made.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | J.Pfeiffer    |          |
| 3           | <ul> <li>Liquefaction Facility Status / Plans</li> <li>J. Renavatio asked about whether the staged construction of LNG trains indicated that the entire project could come on line in stages. J. Pfeiffer indicated that the hope was that GTP, pipeline, and LNG schedules could be aligned to partially commission the Project as early as possible.</li> <li>J. Pfeiffer explained that the project was comparing site-specific data to Kenai NWS data to demonstrate representativeness and use a longer data record. A. Schuler indicated that either 1 year site-specific PSD-quality data or 5-year Kenai NWS data were acceptable as long as the 5-year Kenai NWS data were found representative of tall stacks.</li> <li>A. Schuler asked about the timing of preconstruction monitoring QAPP and startup to determine impacts on FY2017 ADEC RSA budget. J. Pfeiffer indicated that a QAPP would likely be submitted toward the end of 2016. Actual preconstruction monitoring start was dependent on upcoming Project decisions but anticipated in early 2017.</li> </ul> | J.Pfeiffer    | 1 Hour   |
| 4           | <ul> <li>Gas Treatment Plant Status / Plans</li> <li>B. Broker confirmed that the GTP tall tower was commissioned and data collection began May 1, 2016.</li> <li>J. Pfeiffer indicated that A-Pad and CCP data would be used to model PSD background and that CCP data would provide data to satisfy preconstruction monitoring requirements.</li> <li>J. Pfeiffer indicated that the GTP tall tower data was expected to be used to support use of A-Pad data as resentative of modeled stacks. J. Pfeiffer indicated that there may be interest in the utility of the tall tower data for on-going work and it may be continued beyond the anticipated 1-year timeframe.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               | J.Pfeiffer    |          |

| 5 | <ul> <li>B. Broker asked for ADEC confirmation that close-out audits were required should the project desire to shut down the monitoring station but wanted to use any data collected in 2016. B. Trost confirmed that a close-out audit of the met tower was required as close to the end of the program as possible.</li> <li>B. Broker asked for ADEC guidance on how to submit the 2016 data if that is the project's decision. B. Trost indicated that a report covering only the new 2016 data was acceptable and there was no need to re-produce data and records that will have been reviewed in the 2015 data submittal.</li> </ul> | J. Pfeiffer   |  |
|   | FY2017 ADEC RSA Budget Planning                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |               |  |

## PHMSA Technical Engagement Meeting, 26 May 2016

#### Multi-Layer Coatings

GR: nothing different with 3LPO as compared to FBE - same tools and techniques used to assess the coating and CP. FBE more susceptible to handling and construction damage. FBE requires larger CP current. Majority of world-wide on-shore installations over the past 10 years have been 3LPO

JF: Starts with coating selection: 3LPO have a fewer number of anomalies to start with. Surveillance system is less overwhelmed.

RN: SN previously has raised concerns with CP shielding. How do we detect that if it occurs?

JF: Cohesive disbondment that creates a crevice without a holiday – cannot detect this type of delamination, but conversely there is no corrosion. If there is a holiday, there are a lot of variables, but there will be detection of current using over the line survey techniques.

DK: Professional background – one of the founders of Corrpro, in 2009 bought by what eventually became Aegion. Now Chief Technical Officer for Aegian. Focus of Corrpro is coatings and cathodic protection. CCSI, Bayou (both FBE and 3LPO - primarily FBE given us market), CRTS are member companies of Aegian.

RG: please describe your experience with 3LPE.

DK: Most of the experience is outside the US. Some problems with first few applications. Issue itself is shielding: it doesn't lead to corrosion in and of itself. Most of the industries' experience with disbonded coatings is with heat shrink sleeves and tape wraps. Not the same as an extruded PE coating system.

GR: Shrink wraps had a lot of disbondments, which got lumped into extracoat and then 3LPE. Different systems, but placed in the same category.

SN: have you worked with companies that put in 3LPE where you performed the DCVG, then CIS surveys? Asking because he has no personal experience with 3LPO coatings. US DOT doesn't have a good understanding of how the surveys work – do they work? E.g. Plains crude pipeline with coal tar coating: water under the coating, and corrosion accelerated under the coating. Bigger concern is cracking [SCC]. If PHMSA gives a "no objection" to Alaska LNG's Special Permit, what survey tools are in place? Or, does an EMAT tool need to be used?

RG: Concerns with measurement and remediation in the US. Just because they have used 3LPO internationally doesn't mean it will work in the US. Sees 3LPO as a "young system".

GR: have been around since 1985. Haven't heard any negative experience about how they fared over time.

DK: Talking about a corrosion control system. With over the line survey: penetration to underlying metal, can be detected. Cannot detect if the PE is intact, and there is a holiday in the FBE. But the only time that is a problem is if there is an electrolyte.

MM: Similarly cannot detect a blister in an FBE coating. Over the line techniques cannot detect a defect that doesn't allow electrolyte in.

RG: FBE can pass a certain level of current through it. If there is a 5-6 foot disbondment in a 3LPO coating, will the current get to the pipe?

DK: it will travel several inches, but not feet. The difference is that FBE can pass current through of it.

JL: This is an important question. The fact that you are drawing current from a breach, this creates a voltage gradient that is detected by ACVG or DCVG - there will be an indication of something. Second part of the question is whether you can get CP protection back from the breach. If there was a very long disbondment,

unless you have a large amount of exposed steel, you would still have CP protection. Lastly, is a large KLNG-4020-HSE-MTG-REC 10051.docx disbondment likely, or possible.

Page 2 of 5

DK: If you have a breach in the PE, and it is disbonded from the FBE, there is a limited supply of oxygen. In the water industry, they use Iron pipe that is wrapped with PE sheeting. Even when there is a crevice, there

# PHMSA Technical Engagement Meeting, 26 May 2016

| 9-12  | Review SP Conditions and Environmental Information for 2 <sup>nd</sup> DRAFT of FERC RRS         SN: Aaron Glaser is the PHMSA legal counsel that reviews SP Conditions and Environmental Information.         Waiting for legal to respond to the MLBV and CA Spacing and 3LPE SP Conditions. Please send a revised copy of the SBD Env. Info.         SN: MLBV and CA Spacing SP Conditions - #6, stuck on the 60% MOP. RN explained basis of 60%: there is no requirement in CFR 192 for the pressure at which line break valves must actuate. Therefore, Project started with TransCanada best practice, which is 40% MOP, as the base design case. To ensure that block valve actuation times are equal or better with the SP spacing we increased the activation pressure to 60% MOP. SN: rulemaking in place to address this. Will provide comments to Alaska LNG once he receives feedback from PHMSA Law.         AS-P: Has heard concern of segmentation with information in FERC RRs, however, PHMSA's action is distinct, yet not related because the approval to construct the pipeline is not predicated on issuance of the SP. PHMSA does not have siting authority.         RN: explains where SP information will be placed in FERC RR11.         SB: FERC then takes the RRs and writes an EIS.         AS-P: since FERC will be providing an EISPHMSA can set up a call to FERC. PHMSA's action.         SN: could the Project consolidate the EI into Appendices and also include the information throughout the RRs? |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | SB: We could do this if needed. Need to check with EIS lead to see if we can make this work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|       | AS-P: with other Projects the alternatives presented did not represent PHMSA. PHMSA's interest is to have a consolidated document for their action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|       | SN: Will set up a meeting to discuss with Jim Martin and AS-P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|       | AS-P: Ok to have one set of SP Conditions for 3LPE, CA and MLBV Spacing, and two EI (CA and MLBV spacing) and 3LPE coating. SN agrees to keep 3LPE EI separate from CA and MLBV spacing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|       | What is required for the 3LPE FONSI?<br>SN: needs pros/cons, construction surveys, in-service (e.g. CIS) to demonstrate maintaining pipeline,<br>and then if there are disbonded coatings, how do you address concerns with CP shielding, localized<br>corrosion that is accelerated, and/or potential for SCC. Information or feedback from Europe, or<br>advise that there are no information (PRCI, EPRG, or operator specific, failures or absence of<br>failures). PHMSA would need a lot of information to agree to the SP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|       | AS-P: El template would look similar to what we have for El for SBD. Does it impact the environment,<br>or impact the threat of release, and how the SP Conditions ensure that we are equal or better safety<br>as in full compliance with the Code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 13-15 | Administrative                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

# PHMSA Technical Engagement Meeting, 26 May 2016

| 16-27 | Review of Infrastructure Proximity Information for MLBV Spacing         SN: Would like a map of the route with proposed valves, key bridges, D         HCAs overlaid. OK to break out map into 11X17 sheets. RN to pursue         How many map sheets?         RG: Will send map examples from TAPS.         SN: look at MLBV13 – why 50 miles, what is the terrain?         SN: explains TAPS crossing – 2x crack arrestor on each side with the farther pipeline first comes into closer proximity to TAPS [~200 ft.], and where it lead         MM: considering including intrinsic arrest in TAPS proximity [what length wrffer.         RN: send SN TAPS AG vs. BG pipeline spreadsheet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | access to GIS fo<br>est crack arrest loc<br>wes proximity to T | r PHMSA.   |

| 1     | <ul> <li>3LPO coatings: ensure the following questions, or request for information are provided either in the Environmental information, or the 3LPE Special Permit Conditions:</li> <li>Do over the line techniques (DCVG, CIS, etc.) effective with 3LPE coatings? Provide examples of actual over the line surveys from 3LPE lines. Is there anything different with 3LPE coatings that would impair the resultant over the line data? What will these techniques find, and miss with 3LPE (e.g. disbondment vs. break in coating)?</li> <li>What survey techniques will be used during construction and maintenance and how will they be used? What, when and how often?</li> <li>Regarding performance of 3LPO during operations, there are two questions: based on industry experience, 1) does SCC happen or not and 2) what to do if it does occur (detection and mitigation). PHMSA will accept data from outside the US. Go to EPRG, PRCI, etc. Need to see performance data for 3LPO. Log of who we asked, and where we have searched.</li> <li>Include data that demonstrates CP will actually work with 3LPE coating.</li> <li>Explain whether 3LPE shields CP under disbonded coatings, if it doesn't demonstrate it, and if it does, explain the mitigation measures.</li> <li>What would be the steps taken to ensure that 3LPO coating wouldn't shield CP in our particular situation? Or show historically that shielding hasn't been a problem in other places. Does this coating, in conjunction with CP, lead to localized corrosion or SCC?</li> <li>Acknowledge and explain past problems, and how our Conditions will ensure disbondment will not happen on Alaska LNG.</li> <li>Include pros-cons for 3LPO system.</li> <li>What is the localized (accelerated-e.g. AC interference) corrosion threat, and how do we plan to monitor and mitigate it?</li> <li>Explanation of coating failures, or details on who was contacted to confirm no failures with 3LPE coatings. Need to address references in the industry (c.f. DNV GL Final Report, 1<sup>st</sup> draft).</li> </ul> | Rushau /<br>LaFontaine /<br>Samson                             | 14 June-16 |
| 2     | Contact Rosen or GE to determine the likelihood of an EMAT tool of 42" size                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Noecker                                                        | 14 June-16 |

# PHMSA Technical Engagement Meeting, 26 May 2016

|   | -                                                                                                                                                                                                                                                                                                                                                                                             |                     |            |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------------|
| 3 | PHMSA to contact FERC about inclusion of Special Permit information, to include Environmental Information, in Alaska LNG FERC Resource Report 11. Confirm whether plan discussed with Alaska LNG is agreeable to both FERC and PHMSA [inclusion of SP overview in Section 11.6, attachments for SP Conditions and Environmental Information that covers each SP area.]                        | Nanney /<br>Samaras | 7 June-16  |
| 4 | Check with EIS lead to see if the SP Environmental Information can be included both in the body of the Resource Reports, and consolidated in RR11 appendices.                                                                                                                                                                                                                                 | Barnett             | 7 June-16  |
| 5 | Ensure that the Env. Info. template for 3LPO addresses the following: does<br>use of 3LPO impact the environment, or impact the threat of release, and<br>how the SP Conditions ensure that we are equal or better safety as in full<br>compliance with the Code.                                                                                                                             | Noecker             | 7 June-16  |
| 6 | <ul> <li>Generate a route map overlaid with:</li> <li>Proposed valve type and location (check on location of MLBV 13)</li> <li>Key bridges from PHMSA and ADOT&amp;PF discussions</li> <li>Dalton and Parks Highways</li> <li>TAPS and Fuel Gas Line</li> <li>HCAs</li> <li>Railroad</li> <li>Intertie power line</li> <li>OK to break out map into several 11X17 sheets (10-50?).</li> </ul> | Noecker             | 14 June-16 |
| 7 | Provide Alaska LNG (Noecker) example of TAPS map book to use as a go-<br>by for action item #6                                                                                                                                                                                                                                                                                                | Guisinger           | c/w        |

| 1    | Questions about Vibracoring<br>Operation              | Judy Jacobs asked Billy Oliver a number of questions about the operational aspects of vibracoring, including why it is used as opposed to geotech borings, how the data which is collected by vibracoring compares to the data collected by sub-bottom profiler, why grab samplers cannot provide the required data, and how the field team operates the vibracore (i.e. is the vibracore stopped after the sound source is started?). Billy Oliver provided answers to all of these questions.                                                                                        |  |  |  |
| 2    | Vibracoring as sound source and exposure calculations | Billy Oliver asked Judy Jacobs and Sara Young about vibracore calculations. They said that since the vibracore lasts a longer period of time than originally anticipated, exposure calculations for sounds out to 120 dB must be calculated, and using practical spreading model results in large areas of ensonification. NMFS has not yet finished the exposure calculations for vibracore, and confirmed the activity assumptions with EMALL to be used for calculations: 100 vibracores over 50 days and 30 days of subbottom profiler chirp with approx. 50 km of survey per day. |  |  |  |
| 3    | Use of 2015/2016 IHA                                  | Sara Young said that NMFS had originally targeted end of May 2016 for IHA issuance but that IHA would not be ready at end of May. Survey days allowed under the 2015/2016 IHA is still valid through August 2016. Claire Joseph said EMALL would check and email Sara Young and Judy whether that is the case. Billy Oliver said that the planned survey schedule begins June 2nd.                                                                                                                                                                                                     |  |  |  |

## Intro meeting with State Fire Marshal's Office on Alaska LNG Project

| <u>ltem</u> | Action Items/Topics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Action Item(s)<br>Assigned To: | Due Date |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|----------|
| 2           | Project Overview<br>Scott Gillis presented an overview of AKLNG Project and a<br>technical overview of the GPT and LNG/Marine sub-projects.<br>Jonathan Curniski presented a technical overview of the Pipeline<br>sub-project. Adrienne Rosecrans and Ruben Medrano presented<br>an overview of the NEPA / Regulatory process.<br>Aspects of design that were discussed included: applicable codes<br>and standards being used for design, Fire Service Guidance for<br>Participating in LNG Terminal Evaluation, Siting and Operations<br>(2007), and Early Loss Prevention Philosophies for each sub-<br>project. And aspects of the NEPA / regulatory process included an<br>overview of the different federal, state and local agencies involved<br>in the AKLNG Project. | n/a                            | n/a      |
|             | It was clarified the LNG carriers were not part of the AKLNG<br>Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                |          |
|             | <b>Design Codes</b><br>Scott Gillis explained that the Project is currently being designed<br>according to both FERC requirements listed in the CFRs, in<br>compliance with the Alaska Administrative Code (AAC), and<br>additional lead party design codes and standards. The CFR and<br>AAC required codes and standards may create discrepancies<br>regarding which year version of the code applies. The SFMO was<br>agreeable to working through those "pinch points" through the<br>Alternate Means and Methods process (exceptions).                                                                                                                                                                                                                                    |                                |          |
| 3           | The SFMO representatives explained that the IBC 2009 is the currently approved version. The SFMO is working on adopting IBC 2012 and eventually IBC 2015. It was stated the use of the 2012 IBC version for the AKLNG project would be acceptable . The AKLNG proposed version of the IBC can be officially documented so there are no issues when a version of the IBC is adopted by the State.                                                                                                                                                                                                                                                                                                                                                                               | n/a                            | n/a      |
|             | The SFMO clarified that they do not issue a 'Certificate of Occupancy'. The SFMO issues a 'Certificate of Approval' for process and non-process type buildings. And the definition of a building is any structure with four (4) walls and a roof. All structures will require a "Plan Review".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                |          |
|             | The SFMO informed they coordinate with the local Fire Chief to<br>ensure the design and emergency response plans are in alignment<br>with the fire department expectations and approval requirements<br>before the SFMO approves our plans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                |          |
|             | The SFMO indicated that appointment of a new State Fire Marshal<br>(position is currently vacant) might assist in helping provide<br>guidance with respect to codes that should be used. The new<br>State Fire Marshal will have the authority to make decisions and<br>document them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                |          |

## Intro meeting with State Fire Marshal's Office on Alaska LNG Project

| <u>ltem</u> | Action Items/Topics                                                                                                                                                                                                                                                                                                                                                          | Action Item(s)<br>Assigned To:                    | Due Date  |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|-----------|
|             | <b>Inspections</b><br>Diana Parks explained that construction phase inspections are<br>handled by her group for buildings over \$5M. The inspections are<br>typically performed at 60% & 90% completion.                                                                                                                                                                     |                                                   |           |
| 4           | John Canthon is the POC for operations and inspections and sits<br>with the State Pipeline Coordinator's Office (SPCO). He<br>commented that they believe the LNG plant may not be applicable<br>to the Fire Marshal (FM) inspection because FERC will perform the<br>same inspection each year. GTP and Pipeline facilities will be<br>applicable to annual FM inspections. | n/a                                               | n/a       |
| 5           | <b>Emergency Response</b><br>The SFMO explained that the local fire departments must be<br>involved in the emergency response planning. The SFMO will be<br>checking to make sure the local departments review and approve<br>the emergency response plans.                                                                                                                  | A. Rosecrans                                      | 6/30/2015 |
|             | <u>Action:</u> Talk with Phil Suter regarding recommended timing to<br>engage with the local fire departments to start discussing<br>emergency response planning.                                                                                                                                                                                                            |                                                   |           |
| 6           | <b>Next Steps</b><br>The SFMO recommends a project review with the new State Fire<br>Marshal, once he/she is nominated. From a technical standpoint,<br>the AKLNG team can start engaging with Diana Parks regarding<br>design code and discrepancy concerns.                                                                                                                | Luci Machado<br>Scott Gillis<br>Jonathan Curniski | TBD       |
|             | <u>Action:</u> Loss Prevention Engineers for each sub-project team to develop a preliminary list of potential discrepancies between codes and standards, as well as potential issues related to compliance with code requirements.                                                                                                                                           | Francisco Santos                                  |           |

| MEETING DETAILS  |                                                                             |                 |                                                |  |  |

| 1    | Practical Approach to Guideline<br>Recommendations | Open discussion occurred about the ADEC Recommended Guidelines for protection of drinking water areas from general construction areas after the Project team provided an overview of the G&G program. ADEC communicated that theses are recommendations and application could be tailored project by project. Alaska LNG confirmed that communication with Public Water System owners was scheduled. AKLNG acknowledged that ADNR had previously issued these guidelines as recommendations and not permit stipulations on other project (Point Thomson for Temporary Water Use Authorizations). ADNR/SPCS indicated that issuing the guidelines as recommendations for consideration and not permit conditions would be a reasonable approach for the ADNR Temporary Land Use Permit (LAS 29678). |  |  |

| 1    | FMATS and Transporation<br>Conformity                                       | Metro transportation plan-20 yr horizon updated every 4 years, next update cycle to begin in 3Q16      Project related inputs to transport model desirable to plan for emissions conformity in Fairbanks PM     2.5 NAA, but also for bridge capacity, etc • Emissions info ultimately critical ADEC input to SIP     budget for NAA                                                                                                                                                                                                                                                  |  |  |
| 2    | FERC and General Conformity                                                 | • FERC's obligation in licensing projects is to ensure conformity for both a transportation and a general (non-transport) project air impacts • Concern about double counting if considered in transportation plan in addition to FERC licensing/conformity process • Project will need to characterize all direct and indirect emissions by time and amount of specific emissions (NOx, PM, etc) • Past projects have found that development/purchasing of offsets easier than amending SIP                                                                                          |  |  |
| 3    | Intersection of Transportation and<br>General Conformity for Alaska<br>LNG? | • Direct/indirect emissions will be broken out by the NAA or maintenance area in which they occur •<br>Timing of licensing/NEPA document may not allow enough time to amend the SIP concurrently, but<br>FERC doesn't dictate path to conformity • Seems like most emissions will be transportation related,<br>so general (non transport) conformity issues not likely to be as significant • Taps/connections/spur<br>lines not addressed under the Project but may need some treatment as part of cumulative impacts •<br>Metro transport plan required to show attainment by 2019 |  |  |
| 4    | Follow-up/what's next?                                                      | More information available to FMATS via Draft 2 RRs, Fairbanks FERC workshop in later August      FERC will consider everything via general conformity unless another approach is suggested      Detailed conversation better handled in separate meeting vs workshop                                                                                                                                                                                                                                                                                                                 |  |  |

| Item | Agenda Item(s)                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 1    | SSHE Moment                                     | Michael Zhang presented a SSHE moment which used two different incidents relating to pipe transportation safety to illustrate the value in evaluating incidents for their potential consequence in addition to actual consequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| 2    | TAPS Impact Study                               | Michael Zhang presented an overview of the approach and results from the TAPS Impact Study. The following questions or topics were also raised and discussed: • Alaska LNG Project pipe grade and operating pressure. • Scope of PHMSA Special Permits for which Alaska LNG Project intends to apply/request. • Alaska LNG Project pipeline construction logistics: transport by highway or ocean/barge. • Alaska LNG Project pipeline cathodic protection system. • Alaska LNG Project use of pipeline insulation to mitigate thermocarsting (especially prior to commissioning.) • Consideration of opportunities and vulnerabilities to Alyeska / TAPS spill response, using ODPCP(s) as reference documents. • BLM expressed concern regarding secondary impacts of a combustion event.              |  |  |
| 3    | BLM oversight and feedback on<br>Project design | The group discussed the dual roles of BLM in both evaluating issuance of a ROW Grant to the Alaska LNG Project for the pipeline located on BLM land, as well as BLM's oversight and monitoring responsibilities regarding TAPS (see: http://www.blm.gov/ak/st/en/prog/pipeline_monitoring.html). BLM interests are ensuring that where the Alaska LNG Project is located in close proximity to TAPS, the integrity and operability of TAPS are maintained. BLM noted they do not have specific criteria/thresholds to determine acceptability. Alaska LNG Project requested and would appreciate BLM inputs to the TAPS Impact Study engineering reports; updates will be incorporated as appropriate in the FERC Application and/or in future engineering studies conducted in FEED or Detailed Design. |  |  |

| 1    | DH4 modification | Jennifer Dupont and Chris Wrobel presented the GTP's new plan for a DH4 modification which would result in no dredge channel. EPA's initial reaction is that this is a reasonable scenario, but needs more understanding of potential environmental impacts. Alaska LNG Project would move from working this with the dredging manager (i.e., Chris Meade) to seeking approvals through their discharge of fill material manager (Gail Martin in Anchorage office would be lead ) and EPA's NEPA manager (Jennifer Curtis); Alaska LNG Project would need to approach EPA with solid justification and demonstration of LEDPA. USACE said they had a few more comments around potential environmental impacts of the modified DH4 case. Alaska LNG Project would need to evaluate/have an understanding of sediment transport, existing habitat in fill area, potential impacts to coastal erosion and/or physical oceanography; will also need to consult NMFS since this involves Essential Fish Habitat modifications; whaling impacts. One of USACE's permitting goals will be to avoid changing the natural sediment transport. The goal is to avoid accretion or degradation of sediments as a result of the project. The Project would also need to define if the placement of fill is temporary or permanent. |  |  |

| 1    | Hydrant Letter Under Review; LOR with Captain of the Port | Jeff Raun called LTJG David Parker to discuss next steps for trestle fire hydrant review. Jeff offered to send a slide pack to USCG for their review and then re-evaluate if a meeting was necessary to discuss fire hydrant questions persisting from USCG. LTJG Parker confirmed the Letter of Recommendation for the Waterway Suitability Assessment was on Captain Albertson's desk for signature. |  |  |  |

| 1    | IHA Status     | EMALL (Jeff) confirmed March 28th project description is current and requested NMFS evaluate the IHA application accordingly. NMFS confirmed that the Cook Inlet Beluga Whale (CIBW) is a spotlight species and that NEPA coverage for the right period and action is required. NMFS confirmed they are responding to a FOIA request. NMFS confirmed they would revise the Environmental Assessment to cover EMALL only; NMFS (Judy) would re-write the BiOp and the IHA would be based on that information, indicating that the 2017 EA would contain baseline from the 2015/2016 efforts. NMFS confirmed that applications for 2017 would have to run through a programmatic EA process with a potential outcome that an "unacceptable level of takes" would be determined therein requiring 2017 operators to scale back. NMFS confirmed that 2017 applications are due by October 1st. All action items from this meeting reside with NMFS. |  |  |  |

| 1    | TAPS Thermal Radiation Study                     | A review of the thermal radiation study was conducted. Jet fires that do not impinge on TAPS are not a significant impact.                                                                                         |  |  |  |
| 2    | MLBV and CA Spacing Special<br>Permit            | MLBV and CA spacing were reviewed. Specific locations such as at Atigun Pass and other crossing types were discussed in more detail.                                                                               |  |  |  |
| 3    | Special Permits and<br>Environmental Information | Alaska LNG responded to PHMSA's comments on the SP draft environmental information documents. The second draft of the Resource Reports will contain SP information. Timing of actual SP filing was also discussed. |  |  |  |

| 1    | Preparation for future discussions with PHMSA (and FERC) | A discussion of the potential approaches for future discussions to best address PiP suitability in the marine transfer area of the LNG Facility were reviewed. Alaska LNG is proposing to use PiP as containment without an underlying collection system. |  |  |

#### **BRIEF SUMMARY OF MEETING**

#### **Document Number:**

USAL-PL-BAMOM-00-00008-000

Date: August 10, 2016

Time: 2:00 ~ 3:00 p.m. AK

Subject: Discussion of AKLNG APT Water Discharge Plan Submittal to ADEC

Attendees:

ADEC – Gerry Brown, Monica English, Natalie Wagner, Katrina Chambon, Jaime Grant Fugro – Tom Posey, Jeriann Alexander, Rai Mehdiratta AECOM: Paul Myerchin AKLNG: Patrick Wong, Leilani Inman

Not Present: Kara Kusche (ADEC), Billy Oliver (AKLNG)

| Item | ADEC Comments                                                                                                                                                                                                | AKLNG Response / Action                                                                                                                                                                                                                                  |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      |                                                                                                                                                                                                              |                                                                                                                                                                                                                                                          |
| 1    | Target elevation of APT discharge water in<br>Peterkin Quarry is not consistent in AKLNG<br>documents submitted to ADNR and ADEC.<br>Figure in the submittal to ADNR shows both<br>98 and 101-foot contours. | AKLNG will state the 98-foot elevation target<br>in the cover letter for the supplemental<br>information submittal.                                                                                                                                      |
| 2    | The infiltration rate is very low when<br>compared to values submitted by others to<br>ADEC in the same region and type of soil<br>(sand) at the discharge site.                                             | AKLNG has adopted a lower bound value to<br>be conservative. AKLNG will submit the<br>percolation test results and any associated<br>calculations.                                                                                                       |
| 3    | The total area of inundation for the target<br>98-foot elevation is not provided; it is<br>important for water volume balance<br>evaluation.                                                                 | AKLNG will provide the calculated total area;<br>AKLNG has re-iterated that in the base plan<br>the contingency is to stop the APT<br>immediately if the discharge water level at the<br>Peterkin Quarry reaches 98-foot contour for<br>whatever reason. |
| 4    | There are no water quality test results for the 2 <sup>nd</sup> water bearing unit included in the submittal.                                                                                                | AKLNG will provide the test results; it is noted<br>that the wells are AKLNG and third-party<br>wells that are located at some distances<br>away from APT wells.                                                                                         |
| 5    | Are water quality test results available from APT-1 and -2 wells that target 2 <sup>nd</sup> water bearing unit?                                                                                             | The wells have not been drilled; AKLNG is collecting water samples from all 4 OWs that have been drilled; test results will be provided to ADEC for review as the OWs are closer to APT-1 and -2 wells.                                                  |
| 6    | There are no water quality test results for the 3 <sup>rd</sup> water bearing unit included in the submittal.                                                                                                | There was no well drilled to the 3 <sup>rd</sup> unit<br>except APT-3 well which is being drilled;<br>water sample will be drawn and tested after<br>well completion; results will be submitted to                                                       |

|    |                                                                    | ADEC prior to pump test;                       |
|----|--------------------------------------------------------------------|------------------------------------------------|
| 7  | Is there additional information on TPW-2                           | AKLNG could not find out well log so the       |
| ,  | well, such as depth, particular water bearing<br>unit tapped, etc. | depth of well screen is unknown.               |
|    | unit tapped, etc.                                                  | Post Meeting Note: ADEC found in its           |
|    |                                                                    | database a well that might be TPW-2. Well      |
|    |                                                                    | log & well location aerial photo were emailed  |
|    |                                                                    | to AKLNG on August 12, 2016.                   |
| 8  | Ideally TPW-2 should be monitored and                              | AKLNG already plans to continue to monitor     |
| Ŭ  | sampled during APT; ADEC recognizes that                           | and sample TPW-2 at regular interval after     |
|    | this is not feasible due to time lag of                            | APT (ADEC comments that it is a good idea).    |
|    | receiving test results from lab                                    |                                                |
| 9  | ADEC takes note that all qualified labs are                        | AKLNG will continue to find a qualified lab    |
| -  | very busy and even expediting testing may                          | that has capacity to expedite testing of water |
|    | still take time; ADEC will progress AKLNG                          | samples at a more reasonable timing.           |
|    | application with that in mind while                                |                                                |
|    | recognising AKLNG timing on the APT (first                         |                                                |
|    | week of September).                                                |                                                |
| 10 | The person responsible for reviewing                               | AKLNG is standing by.                          |
|    | AKLNG's submitted Peterkin Quarry oil stain                        |                                                |
|    | removal plan is not available this week;                           |                                                |
|    | review is expected next week                                       |                                                |
| 11 | ADEC has reviewed USGS Geologic Survey                             | AKLNG will review the report.                  |
|    | Report 96-466 regarding dissolved arsenic                          |                                                |
|    | in the vicinity of the APT area. The                               |                                                |
|    | document supports ADEC's perspective that                          |                                                |
|    | arsenic tends to be variable. AKLNG should                         |                                                |
|    | use this information in considering the risk                       |                                                |
|    | of encountering arsenic above Maximum Contaminant Levels.          |                                                |
| 12 | ADEC reminds AKLNG that the plans need                             | AKLNG will continue to pursue.                 |
| 12 | to be sealed by an Alaska PE.                                      | ARENO will continue to pursue.                 |
|    | to be sealed by an Alaska I L.                                     | Post Meeting Note: ADEC emailed AKLNG          |
|    |                                                                    | on August 12, 2016 a checklist showing the     |
|    |                                                                    | information that should be considered in the   |
|    |                                                                    | submittal for this disposal activity.          |
| 13 | It will be helpful for AKLNG to document any                       | AKLNG will take the suggestion into            |
|    | "Stop-Action" or contingency plans in the                          | consideration.                                 |
|    | event that samples taken at monitoring wells                       |                                                |
|    | show water quality criteria exceedances or                         |                                                |
|    | unanticipated results.                                             |                                                |
| 14 | It is appropriate to provide specifications for                    | AKLNG is assembling the requested info.        |
|    | the piping/hose materials (checklist provided                      |                                                |
|    | to AKLNG), which should include flushing                           |                                                |
|    | and tightness of the hoses.                                        |                                                |
| 15 | ADEC expressed concern that using                                  | AKLNG noted that because the APT wells are     |
|    | analytical results from the OW assuming                            | to be installed just before the pump tests it  |
|    | they are representative of the APT water                           | does not provide adequate time to sample       |
|    | may not be appropriate given arsenic in the                        | and obtain results prior to conducting the     |
|    | area tends to be variable. This could                              | pump tests and the cost of expedited           |

| potentially lead to a situation where AKLNG<br>could be unknowingly not in compliant with<br>water quality standards, render the upper<br>zone as impaired for drinking water uses,<br>impact a nearby private well (noting this well<br>already exceeds water quality criteria for<br>arsenic), and potentially become subject to<br>enforcement actions or third-party legal<br>actions. | samples coupled with crew downtime<br>presents undue expenses. ADEC will<br>research internal records regarding arsenic<br>sources and consider AKLNG logistics during<br>review of the plan submittal. |

 MEETING DETAILS

 Meeting Type
 Meeting/Workshop
 Date of Meeting
 August 15, 2016

 Sub-Project Name
 Location
 8701 Gessner Rd, Houston, TX 77040

 Meeting Subject
 Continuation of technical progression of special permit applications

| 1 | Stakeholder Issue | Questions/Comments:<br>- Discontinue Permafrost & Buried Pipeline<br>- Borrow Sources<br>- Highway safety & traffic and tourism impacts<br>- Construction season<br>- Trails<br>- Compressor Station locations     |
|---|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 | Stakeholder Issue | Water Issues                                                                                                                                                                                                       |
| 3 | Stakeholder Issue | Port Issues                                                                                                                                                                                                        |
| 4 | Stakeholder Issue | Waterbody crosses and buried pipe<br>Timing and site specific water crossing                                                                                                                                       |
| 5 | Stakeholder Issue | What are co-location options with other utilities, like the new fiber optic cable to the North Slope?<br>What is the minimum separation distance?                                                                  |
| 6 | Stakeholder Issue | While Valdez may not be the best location for an LNG facility, it may be the best route for a pipeline.<br>There needs to be more discussion of the Valdez alternative and more justification for not going there. |

| Alaska LNG. | MINUTES OF MEETING (MOM) | DCN tbd<br>02-Nov-16<br>Revision: Final |
|-------------|--------------------------|-----------------------------------------|
|             | CONFIDENTIAL             | Page 3 of 4                             |

| 7  | Stakeholder Issue | Land access issues – Federal land: Acquisition of Right of Way (ROW) on BLM land does not include timber. Will need a separate process for timber management. BLM noted that their regulations indicate that timber must be purchased separately so the Resource Report should include a discussion about the planning and sequencing of clearing vegetation and timber for construction. This can be negotiated with BLM. Important information indicated that at some point the project will need to identify where "merchantable timber" will be along the pipeline corridor. FERC pointed out the Denali National Park and Preserve (DNPP) alternative and noted that the NPS is in favor of it but there could be issues related to ANILCA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8  | Stakeholder Issue | BLM asked how the vegetation mapping was done. The project used a combination of aerial imagery to identify ground truth locations and prepare maps. More information is needed about the bases for project vegetation mapping e.g. proportion of desktop verses field verification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 9  | Stakeholder Issue | Agency recommended making maximum use of the collection of TAPS archaeological information housed at the University of Alaska Fairbanks Museum. There needs to be a discussion on traditional cultural properties. It is time to begin discussions of Programmatic Agreement/Memorandum of Understanding. Need to discuss permanent and temporary impacts to subsistence as well as subsistence impacts in the Gates of the Arctic due to change to five mile buffer of the Dalton Highway. Access provided by the Pipeline ROW has positive and negative impacts to subsistence - depending on pre-existing use/access, location, users etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 10 | Stakeholder Issue | Who is drafting BLM's 810 analysis, BLM? FERC stated they have no experience. It is important for 810 to be done with the DEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 11 | Stakeholder Issue | FERC-discussion around local/native jobs, opportunities, training, challenges. Acknowledged as important and would be addressed, especially during EIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12 | Stakeholder Issue | It is likely that reclamation plans will be required for all material/borrow sites. The<br>Project noted that the current Restoration Plan will not contain information on<br>reclamation of material/borrow sites due to the uncertainty of their location at<br>this time. Site specific plans will be prepared as these sites are identified. The<br>Project also noted that the Restoration Plan to be submitted with the filing will be<br>more than a table of contents. An agency attendee stated that there are many<br>examples, particularly in the southern half of Alaska, where revegetation of gravel<br>fill is naturally occurring. FERC asked the agencies for copies of their Best<br>Management Practices for managing their lands, wildlife species, etc.<br>B LM noted they have significant experience with reclamation of material/borrow<br>sites and can s hare thatinformation with FERC. Revegetation is a big issue.<br>Agencies commend including jogs in the alignment of material site access roads to<br>visually screen material sites from roadways.<br>There is an attempt at describing the Least Environmentally Damaging Practicable<br>Alternative (LEDPA) that sets the stage for further analysis; USACE will need to<br>review and determine whether they agree. |
| 13 | Stakeholder Issue | There was discussion about the differences in product temperature (i.e. oil vs gas). More information is needed about blasting in permafrost and managing frozen debris lobes. Trenching on the North Slope is a concern.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 14 | Stakeholder Issue | What will geo-hazard plans be based on? Are geo hazard plans site specific or resource specific?<br>How will slides on slopes along the proposed route be addressed? What are mitigation measures for<br>volcanic eruptions? Ensure there is good exploration data for material sites, don't just rely on<br>historic/cursory analysis. BLM will require geotechnical information for each proposed material site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 16 | Stakeholder Issue | FERC asked the agencies to provide them with information about wildlife timing windows. Water withdrawal impacts to nesting birds along the Dalton Highway are a concern. FERC discussed the need to quantify the significance of impacts to terrestrial species. The dredge spoils are large such that agencies should be looking at the potential impacts to benthic invertebrates. The USFWS expressed interest in having the Pacific Walrus, currently a candidate species under the ESA, included within the BA. Agencies would like more discussion about the potential impacts to avian species as a result of flaring and elevated flairs specifically. |

| 17 | Stakeholder Issue | USFWS relayed a recent field trip to the North Slope and how a site with tundra sod removed and placed elsewhere was looking promising as far as restoration. To USFWS, harvesting sod still seems important for successful restoration. (Note that the project being referred to was implemented to address tundra damage from rolligons.) Resource Reports do not address forest health mitigation                                                                                                                                                                                                                                                            |
|    |                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 19 | Stakeholder Issue | How will fires be managed in more remote areas? It's normal to let them burn, will they need to be managed due to the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                     |  |  |
| 1    | Stakeholder Issue | Discussed:<br>- Gravel<br>- Ice roads<br>- Above vs. below ground pipeline<br>- Access roads<br>- Abandonment procedures                                                                        |  |  |
| 2    | Stakeholder Issue | USACE asked if Point Thomson Gas Expansion included in the Area of Potential Effect (APE).                                                                                                      |  |  |
| 3    | Stakeholder Issue | Discussed the proposed groundwater usage at the LNG facility.                                                                                                                                   |  |  |
| 4    | Stakeholder Issue | Agencies would like to see more discussion and explanation for the selected water body crossing and stream crossing locations, with an explanation of why the crossings are in those locations. |  |  |
| 5    | Stakeholder Issue | FERC does not find that the Denali National Park alternative has been demonstrated as an impracticable alternative.                                                                             |  |  |
| 6    | Stakeholder Issue | More discussion is needed about a Valdez option.                                                                                                                                                |  |  |

| 7 | Stakeholder Issue | Discussed:<br>- Cultural resources and traditional knowledge<br>- Archeological districts and determination of eligibility<br>- APE, SHPO liked use of cultural resource advisors<br>- Trails                                                                                                                                                                                                                                  |
|---|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8 | Stakeholder Issue | Health Services – The HIA seems to overlap with the transportation study. There are huge geographic gaps in emergency response coverage currently. Where will additional emergency response (ES) coverage be addressed. Are impact payments expected to pay for the additional emergency responder resources needed?<br>Discussed:<br>- Health Impact assessment and emergency response needs<br>- Safety<br>- Tourism Impacts |

| 9  | Stakeholder Issue | Discussed:<br>- Gravel<br>- Ballast Water<br>- Mixing Zones and BMP's<br>- Restoration Planning and Invasive Species<br>- Stope Stability and Construction techniques<br>- Noise and Subsistence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 10 | Stakeholder Issue | Blasting plan needs to address blasting in permafrost.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 11 | Stakeholder Issue | Attendees said they would like to see a discussion of alternatives to placing so much gravel fill in wetlands. The USACE suggested that gravel placed should be removed once it has filled its need if the project is calling it temporary. EPA questioned which Functional Assessments would be accepted by the Corps for permitting. The Corps has said that an FA based on the HGM method would not be accepted. The Corps said that they are reviewing our current proposal which is a combination of methods. EPA would like more information on the FA once we agree with the Corps the appropriate method. EPA and USACE will discuss to ensure they can approve the project's FA method. USACE is currently contemplating the 51,600 acres of wetland impacts, the 17,800 stream crossings and the 5,366 acres of operational impacts. How can wetland impacts be reduced? USACE ask, can the gravel fill be pulled back, even if only partially, and topsoil placed on surface to promote revegetation? How does the restoration plan address restoration of gravel fill? If gravel fill is required, how can use of gravel fill be mitigated? FERC noted that the Project must make sure that the USACE requirements for restoration are met. (The Project has reached out to the USACE already on this, has another meeting scheduled for the following week and then will pull in additional agency representatives to the discussion about performance criteria.) |

| 12 | Stakeholder Issue | Discussed:<br>- Cook Inlet Beluga whales and habitat<br>- Biological Assessment and Ringed and Bearded seals<br>- Restoration of stream crossings<br>- Fish movement and water |
|----|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13 | Stakeholder Issue | FERC is sensitive to the fact that construction duration is long-term. Hence, interest in 24-hour construction activity, dust, minor source NSR permits for construction etc.  |
| 14 | Stakeholder Issue | Discussed:<br>- Strain Based Design (pipeline)<br>- Soils and erosion                                                                                                          |
| 15 | Stakeholder Issue | Discussed:<br>- Potential for ground water contamination<br>- Water Quality and discharges                                                                                     |
| 16 | Stakeholder Issue | Discussed:<br>- Dredged material disposal plan<br>- Dredging and sediment plumes                                                                                               |
|    |                   |                                                                                                                                                                                |

| 18 | Stakeholder Issue | Discuss:<br>- Right of Way Access<br>- Bufførs (screening)<br>- Visual Concerns<br>- Clearing Needs<br>- Induced Access<br>- Trails                                                                                                                                                                                  |
|----|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19 | Stakeholder Issue | Concern about potential issues at Gates of the Arctic National Park. Issues may include increased access, visitation, overflights, noise, light, etc. Also Denali Park Route Alternative If the pipeline is constructed through Denali Park, NPS would like to see the right-of-way incorporated into a trails plan. |

| 1    | Meeting with DNR - Office of<br>History and Archaeology/State<br>Historic Preservation Office<br>(SHPO) | On Thursday September 1, 2016, representatives of the Alaska LNG Project (Caryn Rea, Mark Jennings and Ned Gaines) met with representatives of DNR's Office of History and Archaeology/State Historic Preservation Office (Shina Duvall and Richard VanderHoek)) to discuss the Section 106 Process and mitigation strategies for potential adverse effects to NRHP-eligible sites within the Project footprint. To date, the Project has identified 58 NR-eligible or recommended sites within the Project footprint. Phase One surveys have been completed for approximately 90 percent of the Rev C corridor. Shina Duvall indicated that regulations do not specifically require that 100 percent of lands in the project footprint must be surveyed. Regarding the Section 106 process, Ms. Duval indicated that any treatment plans for NR-eligible sites are not required until after the FERC Application. Treatment plans are premature at this point. Data recovery is a typical method for mitigating adverse effects to historic properties, and the precentage of each site excavated will be determined on a site by site basis. The State may be open to creative mitigation where appropriate, such as horizontal directional drilling beneath sites or developing regional history/prehistoric profiles, etc. Again, this will be determined on a site by site basis. The State will likely desire a Programmatic Agreement (PA) as the appropriate tool for managing cultural resources on a project of this magnitude and complexity. FERC will not broach the topic of PA or MOA until they receive the final application. Still needed at this point is a determination of potential Historic Districts in the Project footprint. The identification of potential historic districts sometimes comes out during consultation. Guidance on Traditional Cultural Landscapes and Traditional Cultural Properties is currently being revised. In closing, the State indicated their appreciation of the Project update and said they desire regular coordination as the Project progresses. |  |  |

| 1    | Overview of KSH Relocation<br>Project / Timing with overall Alaska<br>LNG Project | • Background: Mark D. and Mac S. met with USACE (Sandy Gibson and Mary Romero) and AKLNG prior to this meeting to discuss the Kenai Spur Highway (KSH) Relocation relative to the AKLNG project and the 2015 feasibility study. After hiatus the project is refining alignments and planning how this road might be advanced in a potential 404 context. • Issue: KSH is a state facility and part of the National Highway System. It has to be realigned before any work will take place at the AKLNG site. It is an "early works" component that has to be completed before the AKLNG site can be developed.                                                                             |  |  |  |
| 2    | Role of the FERC in the KSH<br>Relocation Project                                 | <ul> <li>Project falls outside of FERC EIS process. It is considered "connected but non-jurisdictional". It's connected, but FERC doesn't have jurisdiction because it is a transportation facility, not a pipeline or LNG plant. In NEPA/Regulatory world, it is almost like an orphan. It is discussed in the EIS as a reasonably foreseeable action. o Technically, relocation of the road would need to take place prior to the facility being built. If the road were realigned and replaced and the facility was never built then it wouldn't be connected to the pipeline permit. It could be permitted outside the AKLNG, which would put it in the USACE Kenai office.</li> </ul> |  |  |  |

| 5 | Discussion of Kenai Peninsula |
|---|-------------------------------|
| 5 | non-jurisdictional wetlands   |

Some of the alternatives are located in close proximity to wetlands, but they could be potentially non-jurisdictional wetlands. • Last year a local landowner offered an alternative route. He provided feedback to the governor and the Borough. Route will impact wetlands, but AKLNG agreed to evaluate it. • Based on the alternatives drawn so far, what is the possible maximum amount of wetlands that would be affected? None of the alternatives currently impact wetlands or waters of the U.S. • HDR conducted a feasibility study and placed all the NEPA topics on a map. Looked at all issues, including wetlands, bald eagle nest sites, hazmat materials, traffic, land use, geotech (bluff instability), surface and ground water; trying to get the whole suite of issues on a map to identify viable corridors. Identified wetlands on the map and designated the area for field crews to go out and conduct sampling. Field-verified wetlands are designated in blue on the Corridor Map. Using the primary risk factors came up with these primary corridors and they avoid wetlands. • What is Corps experience with mitigation; what is the practice on the Kenai? Work on a lot nationwide Permits 95 percent of permits issued are for impacts that are less than half an acre. USACE probably required compensatory mitigation on less than 10 projects. Decision on compensatory mitigation (whether a nationwide permit or an individual permit) comes down to resources (how common, what function it provides for both Cook Inlet as well as the region). One option for compensatory mitigation includes paying a fee to The Conservation Fund. TCF is the only In-Lieu Fee Program servicing the area. There are no mitigation banks on Kenai Peninsula.

| 1           | The annual meeting was attended primarily by tribal members of the Native Village of Eklutna. Approximately 70 people attended the meeting, and it was held at the King's Way church in Eagle River. The focus was on the annual voting for officers for the council and there were presentations provided by staff on various projects. Other participants in the meeting included the Alaska Native Tribal Health Consortia (ANTHC) and Alaska LNG. |                        |                |               |                    |                           |                  |
| 2           | The sign in sheet reflects those attendees interested in receiving information on the project (e.g. future newsletters and emails about meetings).                                                                                                                                                                                                                                                                                                    |                        |                |               |                    |                           |                  |

| 4 | Per Brian Lindamood: Seward dock has a pipeline from the dock to<br>Shoreside utility for fuel. The Seward passenger dock can be used for<br>freight, but does have weight restrictions. There is a<br>improvement/expansion plan for Seward. The dock and laydown area<br>will be expanded. There is a 30 acre undeveloped adjacent area that is<br>being slowly filled into provide expanded staging and storage. Seward<br>airport is limited in capacity – i.e cannot handle a 737. Hurricane bridge<br>is the highest and longest bridge on the AKRR. Brian Lindamood stated<br>it takes about a month to clear and fill 5 acres of land. AKRR is the Port<br>Authority for Seward and Whittier, and Valdez.<br>AKRR plans to widen and lengthen Seward docks by 2 ½ times todays<br>dock area.<br>Capital constrained. Seward work would take 3 years from financial<br>commitment. Roughly \$42M.<br>Current Stevedore capacity enables working 2 ships at a time. | AKRR | 9:00 |

| 4 | Todd Bunnell stated the AKLNG will have approximately 63 miles of 32" diameter, 0.5 wall, 40' lengths pipe. Subsea (cross Cook Inlet) Concrete Coated pipe will total 54" diameter. Todd stated roughly it would take 12,000 rail cars to move all the pipe. The route in some cases is very close to the AKRR, so there are some opportunities for using the rail and sidings to offload materials to staging areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | AKRR | 9:00 |
| 4 | Per Brian Lindamood: The AKRR explained the sidings are for "Meets" and that spurs could be built of the sidings for offloading, but the sidings themselves cannot be used for offloading.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | AKRR | 9:00 |
| 4 | Per Brian Lindamood and Tim Williams: Whittier: Dock space is congested. 1-2 barge per week typical, and sometimes up to 3-4 barges. Constrained by ability to get loads on and off the barge. Transit time from Prince Rupert to Whittier is typically 4 days. Transit time from Seattle to Whittier is typically 7 days and another 18 hours to Anchorage. Ocean barges typically make 7 knots speed in normal seas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | AKRR | 9:00 |
| 4 | Per Bill Powell, 20 miles of pipe, stacked 2 high takes up about 20 acres of space to stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | AKRR | 9:00 |
| 4 | Per Brian Lindamood: Portage has lots land but it is mostly swamp. The<br>Portage tunnel is more of a constraint than the Whittier tunnel.<br>Clearance charts will be provided.<br>Seward airport is limited in capacity – i.e. can handle a 737.<br>Hurricane bridge is the highest and longest bridge on the AKRR<br>In terms of other AKRR constraints, the Honolulu bridge is the tightest<br>width constraint. Tim Williams will provide clearance charts.<br>Cold weather is a factor in train lengths due to the air brake systems<br>used. Once it gets really cold, trains have to decrease in length due to<br>leaks in the air brake fittings.                                                                                                                                                                                                                                                                                                                | AKRR | 9:00 |
| 4 | Per Brian Lindamood: Whittier Tunnel is 3.5 miles long and restricted to 21 feet high. Portage tunnel is only 20 feet high. 14 foot max clearances in tunnels, but load limit is 8.5 feet wide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | AKRR | 9:00 |
|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |      |

| 4 | Per Brian Lindamood: Fairbanks facility has a lot of flat car capacity, a passenger facility, and an industrial facility. Biggest customer is Flowline and the AKRR leases the land to Flowline. Flint Hills refinery doesn't make fuel, but is used for storage new. They can load diesel into rail Tankers. Crowley's Anchorage facility currently loads jet fuel into tank cars. 5-6 rail cars at a time. Anchorage facility consist of 600 acres, but little is available for lease. 85-95% is currently leased by Flint Hills, Crowley, Lynden, etc.                                                                                                                                                                                                                                                           | AKRR | 9:00 |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|------|
| 4 | Per Brian Lindamood: Birchwood is a facility with Eklutna. There is 160<br>acres of industrial zoned land and is suited for rail. AKRR is working<br>with Eklutna to develop this facility.<br>Port MacKenzie has agricultural covenants that are restricted. AKRR<br>would need about 2.5 years lead time to install tracks to Port McKenzie<br>at around \$125 million.<br>Valdez does not have rail.                                                                                                                                                                                                                                                                                                                                                                                                             | AKRR | 9:00 |
| 4 | Per Bill Powell, pipeline will need approximately 250,000 gal. fuel per day = 75 tank cars.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | AKRR | 9:00 |
| 4 | Per Tim Williams: Tank cars have been hard to acquire. There is new legislation for tank cars pending. Tim thinks there could be a glutton of Tankers available in a year or 2 due an anticipated change in legislation associated with tanker wall thickness. When temperatures are colder – i.e10 degrees F, the trains have to be shorter due to sloppier airline connections on the air brakes. Typical lengths at -40 degree F are 3,000' trains and in the summer up to 10,000' trains. South from Anchorage to Seward the train lengths are more constrained due to curvatures and gradients – typical lengths are 5,000'. In the summer trains heading north of Anchorage can be as long as 10,000'                                                                                                         | AKRR | 9:00 |
| 4 | Per Tim Williams: You can get about 50 89' cars into Seward. 89' cars typically lease for \$800/month. Tanker cars have about a 28 month lead time due to current demands and rent for about \$1200 - \$1600 per month.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | AKRR | 9:00 |
| 4 | Todd stated the pipeline was looking to receive all the pipe within a 2 year period and about 50,000 tons per ship. For the 34 month plan, 125,000' pipe per month has to be delivered. For the 2024 plan, 200,000' pipe per month has to be delivered. Looking at first pipe being delivered in 2020. Once year prior would be civil an infrastructure preparations.                                                                                                                                                                                                                                                                                                                                                                                                                                               | AKRR | 9:00 |
| 4 | Brian Lindamood stated that sidings are strictly used for "meets". Most sidings north of Anchorage are designed to accommodate a 6,500' train the sidings south of Anchorage are designed for 5000-3000' trains. The entire train and engine have to fit on the siding. If the pipeline wants to build a spur off a siding, it needs to be off the siding side or a \$1M penalty to deal with positive train control tax. Typical spurs cost about \$150k to install.<br>Going into Seward, the constraint is curvature and gradient, so trains are typically 5000' – they can be 7000' if they are carrying heavy cargo. Currently the Seward portion of the track is low usage since coal is not being shipped very much.<br>North of Anchorage, the constraint is siding length due to train activity and meets. | AKRR | 9:00 |

| 1                                                                       |                    |                  | DescriptionOn Friday April 17, 2015, representatives of the Alaska LNG project<br>provided a brief 15-minute update on the Project at a regularly<br>scheduled meeting of the Kenaitze Indian Tribal Council. Handouts of<br>a PowerPoint slide deck were provided and both Ms. Gray and Mr.<br>Jennings spoke from the handout.<br>Kenaitze Tribal Council members expressed interest in potential jobs,<br>contracting opportunities and training associated with the Project and<br>had a few questions about the construction schedule. In addition,<br>members indicated concerns about potential impacts to Cook Inlet<br>beluga whales as well as fishing.<br>The Kenaitze Tribal Council members expressed appreciation for the<br>Alaska LNG Project update and asked for periodic updates in the<br>future. |          |  |  |

What happens if we start to develop the 80 acres and throw a couple million dollars into it and the project wants to buy it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1 | A: We will take that question back to the Lands Team, but I would say if you have not been contacted than the project has no plans to acquire it. The project has identified a large area, and we are looking to acquire land in that area. The project does not need every place that has been identified as a possible location, but we need a certain configuration within that area. People ask "where it is going to be", but the project does not know yet. It can shift. It is still in play.                                                                                                                                                                                                                                                         |
| 2 | Q: With regards to Kenai Spur road work, is the project conscious of how the final route decision may also affect businesses/commerce and properties in the area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 3 | Q: What is the planned route from the North Slope through the state?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 4 | <ul> <li>C: Salamatof would like a return visit by an Alaska LNG team to discuss field work in Cook Inlet and subsistence activities.</li> <li>A: At some point, Alaska LNG would like to talk to Salamatof about some of the work out in Cook Inlet. The project has gone through permitting from the National Marine Fisheries Service (NMFS) for seismic work, etc., but we want to inform Salamatof and other tribal entities in the area of the work because a lot of your subsistence activities are based on the vitality of the marine life. If you would like a return visit, how do we coordinate that?</li> <li>C: They can contact me (Chris Monfor) or Sharon.</li> <li>A: Alaska LNG will be in touch for additional communication.</li> </ul> |
| 5 | C: Empty buildings on properties purchased for the project may attract crime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 6 | Q: What are the opportunities for business workshops or sessions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 7 | Q: Are you able to share studies with the Alaska Stand Alone Pipeline (ASAP)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Nikiski Open House Meeting

| r    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6    | <b>Project schedule – general:</b> This project is long overdue. How soon would the project start and get the economy going in the Kenai Peninsula area? General questions about the project timeline for route finalization, regulatory process, and studies. When would the LNG facility be built and in operation? When would gas flow in the line?                                                                                                                                                                                                                                                                                                                                                                 |
| 7    | Land access – general: Is eminent domain an option for the project? Are further property acquisitions going to occur? Can I be forced to sell my land? How does the project decide when to purchase whole parcels of land and not partial parcels? Will more property be purchased even if we are not contacted? The project land appraisal process was explained by request. Will property improvements continue for land at the LNG facility? What is the next step if I live in the mainline corridor? Is the project aware of an existing 300 foot right-of-way at Point Possession? Some homeowners asked questions about being contacted by the project, or wondering if they would be contacted by the project. |
| 8    | <b>Field studies – general:</b> KDLL Central Kenai Peninsula Radio asked for an update on 2015 studies and field work. Some concerns were expressed with borehole studies and water table impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 9    | <b>Stakeholder engagement – general:</b> Several requests for a presentation prior to the Open House. Are maps, posters, and the PowerPoint presentation available online? How can we be involved? Some landowners discussed that they had not been contacted by the project.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 10   | Local content – training general: Interest in business workshops. Would Alaska LNG engage in training opportunities with Alaska Vocational Technical Center (AVTEC)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 11   | <b>Local content – employment general:</b> How many jobs would be created by the LNG facility? When would jobs be available? We would like local businesses involved, and a focus on local hires.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 12   | <b>Local content – contracting:</b> Local electric company noted registration for business workshops and interest in contract work. Can the general public purchase vacated houses on land the project has acquired and move them off the property? A local trailer park owner asked about renting to the project.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 13   | <b>Local content – supplier development:</b> A concern raised about modules being constructed outside Alaska in the Lower 48 and offshore rather than being constructed in Alaska.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 14   | <b>Environmental effects – physical:</b> Concern of impacts to the water aquifer, water table, and personal wells from borehole testing. Would water levels change along lake property? Would land be cleared?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 15   | <b>Environmental effects – socioeconomic impacts:</b> What would the project do about housing? There is a shortage of affordable housing in Nikiski. Would there be dorms at the LNG facility? Concern about effects on land, home, and property values. How would the project affect the local real estate economy? Concern about potential loss of setnet fishing jobs and income. Worried about social impacts to the local area, including a potential increase in crime.                                                                                                                                                                                                                                          |
| 16   | Environmental effects – impacts on local government: Concern about local law enforcement not having the resources to deal with a possible increase in crime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 17   | <b>Environmental effects – air quality:</b> Concern about emissions and smells from the Alaska LNG facility. The existing LNG facility sometimes has a smell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 18   | <b>Environmental effects – noise:</b> How close is the project to Cabin Lake? Concern about impacts of the project to the Cabin Lake area, including noise. Concern about LNG facility noise levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 19   | <b>Environmental effects – road traffic:</b> Concern about the influx of traffic, the rerouting and improvement of roads, and the transport of construction material during tourist season. Would the existing gravel roads be improved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 20   | <b>Environmental effects – safety:</b> Is the gas coming ashore and into the LNG facility safe? Is the gas explosive? Why can the project not use the existing gaslines? Please ensure safe business practices by project contractors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DISC | USSION ITEMS:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                            |  |  |  |
| 1    | Stakeholder Action Item | Bring comment to state requesting representatives at community meetings.                                                                                                                                                                                                               |  |  |  |
| 2    | Stakeholder Action Item | Give Cantwell more information on the agreement in place for costs among the parties (percent ownership).                                                                                                                                                                              |  |  |  |
| 3    | Stakeholder Action Item | Mail postcards earlier for future meetings in Cantwell to account for post office boxes not checked daily. Communicate this to internal stakeholder engagement team.                                                                                                                   |  |  |  |
| 4    | Stakeholder Action Item | Check mileposts on maps (they seem off/misprinted).                                                                                                                                                                                                                                    |  |  |  |
| 5    | Stakeholder Issue       | What is the pressure of the pipeline? Why are project engineers not putting in a few more tees to the line? One attendee noted he was under the impression the project would not supply gas for Alaska because he assumed the gas would be liquefied on the North Slope.               |  |  |  |
| 6    | Stakeholder Issue       | Does the project foresee selling some of the gas in Nikiski?                                                                                                                                                                                                                           |  |  |  |
| 7    | Stakeholder Issue       | Does the Alaska LNG website have a breakdown of what has been spent so far on the project, how the money has been spent, and who has received funds? Is the money being utilized by everyone? Would residents pay more for gas from this project than others? What would the gas cost? |  |  |  |
| 8    | Stakeholder Issue       | What is the life of the pipeline? How long would you be pumping gas?                                                                                                                                                                                                                   |  |  |  |
| 9    | Stakeholder Issue       | If people come out against the project, would you use eminent domain to obtain land for it?                                                                                                                                                                                            |  |  |  |
| 10   |                         | What is involved in the off-takes? The project should be able to design some smaller ones. What is an off-take? Is it a pressure station? Would a plant be built? Is it a tee valve?                                                                                                   |  |  |  |

| Alaska LNG. | MINUTES OF MEETING (MOM) | DCN tbd<br>02-Nov-16<br>Revision: Final |
|-------------|--------------------------|-----------------------------------------|
|             | CONFIDENTIAL             | Page 2 of 2                             |

| 11 | Stakeholder Issue       | Why is the off-take decision with the state?                                                                                              |
|----|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 12 | Stakeholder Issue       | The state should have a representative at public meetings for the project.                                                                |
| 13 | Stakeholder Issue       | Please mail postcards earlier to accommodate residents who do not check mail daily. The mileposts are incorrect on the map.               |
| 14 | Stakeholder Issue       | What is going to happen if there is a spill or explosion? If there is some kind of damage in the future, what would people get in return? |
| 15 | Stakeholder Action Item | MP 181-216.5 Caswell Easement Preferred south side highway route.                                                                         |

| 1    | Stakeholder Action Item | Bring a pipeline engineer to talk to the community about the regulatory process and decision making regarding the route selection.                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 2    | Stakeholder Action Item | Talk to pipeline engineers about the seismic concerns in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 3    | Stakeholder Action Item | Look at comments on mid-October, 2014 ASAP Supplemental EIS regarding access roads, gravel pits, and construction.                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 4    | Stakeholder Issue       | Does Alaska LNG build the line, and we work with the state to get the gas? The primary purpose of the project is to export the gas, and a byproduct is supply for the state? When you talk about alignment with the other entities on the project, are you talking physical alignment on the ground or ideological agreement? Are there plans to absorb the ASAP Project? Will there eventually be one project chosen? Is the ASAP Project not over? How does the gas stay cold en route? Is the gas methane? |  |  |
| 5    | Stakeholder Issue       | Besides profitability, what other things would bring the project to a halt? Where else has this been done in a similar environment? Is Alaska LNG proposing something that has not been done on a comparable scale?                                                                                                                                                                                                                                                                                           |  |  |
| 6    | Stakeholder Issue       | How are drainage crossings handled?                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

| 7  | Stakeholder Issue | Did ASAP or Alaska LNG request the right-of-way through Denali National Park? Is the route through Denali National Park still under consideration? Permission has already been given to go through the park for ASAP. The Alaska LNG proposed route shows the line branching off the highway, going up the valley, and going through a lot of wetland area opposed to going through an already disturbed zone like the highway. Is Alaska LNG attempting to use existing right-of-ways, such as the Intertie? It would be nice to have as a viable option moving the corridor back toward the road. Murkowski went through the effort to get the line through Denali National Park approved; why are you ignoring this? When you have got a lot of people who are environmentally conscious asking you to put the gasline through Denali National Park, they have got a reason for it. I hope you consider it. |
|----|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8  | Stakeholder Issue | What are the next 3-4 years going to look like as far as this coming to reality with Alaska LNG vs. ASAP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 9  | Stakeholder Issue | Can Alaska LNG use eminent domain to take private land? There are private properties abutting the Intertie and that is a concern here [in the McKinley Park area].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 10 | Stakeholder Issue | When will we know whether or not we will be able to access the gas in the McKinley Park area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 11 | Stakeholder Issue | Do you have any specific information on the field work in the McKinley Park area this summer?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 12 | Stakeholder Issue | It would be nice if the state had a representative traveling with you so we could talk to you both at once. When would be the next chance to comment on the route? Do you have access to community responses to ASAP permit applications? Are you sharing that data? We [McKinley Park area residents] made comments for the ASAP Supplemental EIS regarding access roads, gravel pits, and construction back in 2014. Will you please look at those? Is the concept selection process public information?                                                                                                                                                                                                                                                                                                                                                                                                     |
| 13 | Stakeholder Issue | Is Alaska LNG keeping a budget for compensating communities who are not affected positively by the gasline, such as those who do not get an off-take? What is MAG?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 14 | Stakeholder Issue | Are you using local hire? How are you going about labor studies?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 15 | Stakeholder Issue | I hope a training program to be sure Alaskans have the skills to work on the project is a focus of Alaska LNG.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 16 | Stakeholder Issue | Would there be a project requirement to use American steel?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 17 | Stakeholder Issue | If the pipe ruptures, what physically happens? What is the worst case scenario?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 18 | Stakeholder Issue | Would the gasline be above ground in the McKinley Park area because of seismic activity? There are faults in the McKinley Park area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 19 | Stakeholder Issue | What was the safety record on your New Guinea project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 20 | Stakeholder Issue | If you said you were going to put this along the highway and include a bike path, there would be so many people on board with that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 21 | Stakeholder Issue | A major local concern is the impact during construction phase. Gravel pits, explosions, road building. Wildlife and water disturbances and drainage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 22 | Stakeholder Issue | Mile 224 Carlo Creek is a small residential and locally owned commercial district. Would like to see this area remained not impacted. Private land owners own land here that abut intertie. Conserved!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 23 | Stakeholder Issue | Broad Pass/Summit- Why spread out all the easements? Intertie, railroad, highway and AK LNG all side by side makes for a huge disturbance in a highly scenic, rich wildlife and recreation area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 24 | Stakeholder Issue | Many residents are concerned about the routing through the Younert Valley (see supplemental EIS comments for ASAP Oct 2014) and the disturbances caused by access roads, gravel pits, and construction phase. Please consider an alternate route using the highway corridor (particularly if you built a bike path!)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 25 | Stakeholder Issue | What is Alaska's interest and investment in the project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 26 | Stakeholder Issue | What would the finished surface of the corridor be like after construction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| ltem | Agenda Item(s)          | Description                                                                                                                                                              |  |
| 1    | Stakeholder Action Item | If field people are going to drill holes on private property, make sure they have common access figured out so they use regular trails and do not cut through the woods. |  |
| 2    | Stakeholder Action Item | Return for an update in the future, either in conjunction with a FERC scoping meeting, or on behalf of the project.                                                      |  |

| 3  | Stakeholder Action Item | Get back to the community with a number of private properties being affected between Cantwell and Anderson.                                                                                                                                                                                                                                                                                                  |
|----|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4  | Stakeholder Action Item | Provide maps for the office in Healy.                                                                                                                                                                                                                                                                                                                                                                        |
| 5  | Stakeholder Issue       | Why is Alaska LNG called a project and not only a pipeline? How many years of gas are available?<br>Who makes the decision of whether or not to build the project? I was under the assumption that the gas was going to be liquefied on the North Slope; is it being shipped a gas through the pipeline?                                                                                                     |
| 6  | Stakeholder Issue       | Is there an oil price at which the companies will bail on the project? What if one of the producers decides to bail?                                                                                                                                                                                                                                                                                         |
| 7  | Stakeholder Issue       | Who is paying for this project? After pre-FEED, will the partners be looking for additional investors?                                                                                                                                                                                                                                                                                                       |
| 8  | Stakeholder Issue       | Do you have a map showing possible materials sites? Could Healy meeting attendees look at these proposed route maps after today? I am concerned that the maps are not publicly available. We [Healy meeting attendees] would like to have the GIS data to use with our own GIS data. We [Healy area meeting attendees] informed Alaska LNG of an archaeological area last year; has that affected the route? |
| 9  | Stakeholder Issue       | Is there a reason the gasline route has to go where people live instead of near the Intertie? When are you going to investigate Murkowski's bill she passed to allow the gasline to go through Denali National Park?                                                                                                                                                                                         |
| 10 | Stakeholder Issue       | Our economy [in the Healy area] relies on tourism, and I see the map shows the proposed route in Denali National Park, and that could affect tours and tour guides.                                                                                                                                                                                                                                          |
| 11 | Stakeholder Issue       | How many private properties are affected by the project?                                                                                                                                                                                                                                                                                                                                                     |
| 12 | Stakeholder Issue       | Besides the compressor station, what else can Healy expect? Is Healy going to benefit from the project? Might there be an intake plan for local gas sources in the Healy area?                                                                                                                                                                                                                               |
| 13 | Stakeholder Issue       | Will the impact studies take a look at the socioeconomic and environmental impacts regarding the gravel extractions and other construction issues? The work done last summer had quite a bit of environmental impact, so how does the project get a baseline when activities from last summer may impact the data?                                                                                           |
| 14 | Stakeholder Issue       | Is LNG toxic?                                                                                                                                                                                                                                                                                                                                                                                                |
| 15 | Stakeholder Issue       | How will seismic activity affect the pipeline design? Will it be above ground?                                                                                                                                                                                                                                                                                                                               |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 1    | Discussion              | Josselyn O'Connor attended the May business meeting of Kenai Peninsula Foundation (affiliate of the Alaska Community Foundation). Josselyn is the secretary of the organization. After the business meeting adjourned, the group sat around and discussed AK LNG for approximately 30 minutes. Highlights We had a general discussion about my new role with AK LNG. I explained the stakeholder engagement team and process, as well as the Pre-FEED and FEED phases of the project. Roger Boyd • Tanker traffic – Roger is a good friend of Fritz (ConocoPhillips). They have discussed the amount of expected tanker traffic. Roger's exact quote "I don't want a tanker filled with LNG to end up on my beach." He has a home on the bluff south of Kenai. • Encouraged early engagement of the organizations that provide social services • Has friends on Island Lake – they are very concerned about sound. • Has heard stories of BP operations – operate till repair rather than safety and environment first. • Jake Wolfe (Roger's friend) attended Open House in Nikiski and didn't like the format. Jake is a Peak drilling guy. Suggested follow-up. • Perspective – if he was 30 he would probably be all for the project. But now in retirement, he isn't sure. Referred to a bumper sticker after TAPS: Please Lord give me one more AK oil boom and I promise not to piss it away. • Not necessarily against it, but will watch it closely. Kathy Gensel • Workforce – will we be ready? • Influx of people - lines at restaurants and theatres Stan Steadman • Suggested a community game: Set up a boom/bust live game/study. Have people from different perspectives. |  |  |
| 2    | Stakeholder Issue       | Attendee's friend went to an open house in Nikiski and did not like the format. Suggestion of a roleplaying game to simulate different possible economic impacts, including the chances for a boombust scenario.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
| 3    | Stakeholder Issue       | Participant encouraged early engagement of the organizations that provide social services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 4    | Stakeholder Issue       | Will the workforce be ready for the amount of work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |
| 5    | Stakeholder Issue       | Participant was concerned for safety and the environment being a priority. Concern for an LNG carrier to rupture on private property in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |
| 6    | Stakeholder Issue       | Concern for the influx of people locally at businesses like theaters and restaurants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 7    | Stakeholder Issue       | Residents on Island Lake are concerned about potential noise impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 8    | Stakeholder Issue       | Discussed the amount of expected shipping traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |

| 1                                                                                                                                                                                       | Stakeholder Issue | When will the public be able to see options for the Kenai Spur Highway re-route? Is it true that the public will be able to see four or five options for the Kenai Spur Highway road reroute by early fall?                                                                                                                                                                                             |  |  |
| 2                                                                                                                                                                                       | Stakeholder Issue | Will an investment decision be made by 2018?                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 3                                                                                                                                                                                       | Stakeholder Issue | What will happen to property next to the project area? What happens to the project properties if the project does not go forward?                                                                                                                                                                                                                                                                       |  |  |
| 4                                                                                                                                                                                       | Stakeholder Issue | Attendees expressed concern that Homeland Security will block access to their beaches and beach access. Is it possible to dig up the flowers and lilac bushes on the project's property?                                                                                                                                                                                                                |  |  |
| 5 Stakeholder Issue presentation at the recent open house and suggested that at the next open house brief introduction on the format of the event and possibly introduce the project te |                   | Attendees at Nikiski Community Council expressed that they were disappointed there was no presentation at the recent open house and suggested that at the next open house the project give a brief introduction on the format of the event and possibly introduce the project team. Attendees felt it was good to have experts at the stations, but they were not knowledgeable on the overall project. |  |  |

| 1    | Stakeholder Action Item | Take to lands team: sticky note on map for cabin in Nenana on slough (see discussion item 5)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |
| 2    | Stakeholder Issue       | Is the pipeline going to be both above and below ground? What is the temperature of the gas in the pipe? What is the pressure of the gas in the pipe? Would the gas in the pipeline be straight from the wellhead, and would it still have the high-end products in it, such as propane? What is the State of Alaska's gasline entity? How would construction progress on the gasline—would you start from top and bottom? Would it be a separate process for the pipeline and the facilities? Would Alaska LNG put a road in and bring the pipeline down alongside the road? Would they build the road first or build both at the same time? Would Alaska LNG clear the 2,000 foot corridor? |  |  |  |
| 3    | Stakeholder Issue       | We are hoping this project will be a go. Who is your main competition on this? What about opposition? Is there anyone trying to hold this back? Are there agencies coming in and trying to shut you down? I am concerned federal agencies will cause trouble for this project. Do you have letters of agreement for trade with countries, or are there no commitments? Where is the project on an export license?                                                                                                                                                                                                                                                                             |  |  |  |
| 4    | Stakeholder Issue       | Why is the route not by the railroad? Is the route on the opposite side of the river part of the time?<br>Where does the proposed route go when passing by the front of the Denali National Park entrance?<br>The project shows the proposed route coming in close to Nenana.                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |
| 5    | Stakeholder Issue       | How would the gasline go under Cook Inlet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |
| 6    | Stakeholder Issue       | Is Alaska LNG following the TAPS corridor to move from the North Slope to the Interior?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |
| 7    | Stakeholder Issue       | My daughter's property is in the corridor near Nenana. She is right on the slough; will her property be affected?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |

|--------------|

| 8  | Stakeholder Issue       | Do you think construction for the project will start while I am still alive? Would construction begin in 2018, and end around 2022 or 2023?                                                                                                                                                                                                                                                                                                                                                                                          |  |
|----|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 9  | Stakeholder Issue       | Where are the off-takes going to be located? Are there going to be any off-takes near Anderson? I think for the Anderson area there could be an off-take point with a distribution plant for homes and businesses which creates jobs in an area like this between Fairbanks and Anchorage where the economy is fairly depressed.                                                                                                                                                                                                     |  |
| 10 | Stakeholder Issue       | Has the project done any drilling and soil samples?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 11 | Stakeholder Issue       | Is Alaska LNG testing the ground to find out if there is muskeg or water?                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 12 | Stakeholder Issue       | Do you have an office in Fairbanks? Is the presentation from the Alaska LNG business sessions available? In the slides there was a list of some of the types of businesses that might be needed to support the project. That list could inform communities about how they might get involved and best support the project. Alaska LNG should be in the high schools talking to seniors so they could get involved in the trade and get paid. There are a lot of high speed energetic kids who would love to I part of this project.  |  |
| 13 | Stakeholder Issue       | With all the national park land, how are you dealing with federal right-of-ways on the project?                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 14 | Stakeholder Issue       | Having Alaskans working on this project without schooling would make it difficult for you to have a hand you can use. To me, training is a big play on this project. Alaska Works is really looking at getting training for people. If there is a school out there that requires three years of study and hands on training before being a viable craft, then now is the time to plan and enroll. What kind of training potential employees need, where can they get it, and to whom do they talk? That is a local concern Anderson. |  |
| 15 | Stakeholder Issue       | We want you to hire people from Anderson and people from Alaska.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 16 | Stakeholder Issue       | I want to know the availability of the material and equipment to construct the project. Anderson has a lot of land with a lot of gravel, so they would like to see the project contact them for the work that is happening in the general area. We would like to be on your list of people to consult for gravels right out of the pit. Roadhouses and bed and breakfasts are interested in serving the project.                                                                                                                     |  |
| 17 | Stakeholder Issue       | If you are going to have a presence for 25-30 years, you might as well hire locally. Our kids will be there for that amount of time and could be some of your key operators for the duration of the project. We want to see economic diversity and structure happen in the Anderson area.                                                                                                                                                                                                                                            |  |
| 18 | Stakeholder Action Item | Anderson has a lot of land with a lot of gravel, so they would like to see the project contact them for the work that is happening in the general area.                                                                                                                                                                                                                                                                                                                                                                              |  |
| 19 | Stakeholder Issue       | I would like the State of Alaska to help with the energy costs. We would like to have propane on the Yukon River. If you can take care of the villages, things would be a lot smoother for the state.                                                                                                                                                                                                                                                                                                                                |  |
| 20 | Stakeholder Issue       | Are you going to be punching a road out of Nenana to hook into that for a supply area, and then maybe another road down here by the Rex Bridge?                                                                                                                                                                                                                                                                                                                                                                                      |  |

| 1       Stakeholder Issue       The State of Alaska has 25 percent equity; does that mean they have invested 25 percent? Wo State of Alaska recoup their 25 percent investment and generate revenue for the state? Why is gas not liquefied at the point where that they take it out? Why are you pipelining it as a gas? We be a 42 inch pipe? What would be the pressure in the gasline? Would the gasline be above grown of the gas how deep would the pipeline be buried? How many miles is the pipeline? Would some of the gas how down or is this going to be a joint venture with something else? |                   |                                                                                                                                                                                             |  |  |  |
| 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Stakeholder Issue | What is GTP? How big is the footprint of the facility on the North Slope compared to the one on the Kenai Peninsula?                                                                        |  |  |  |

|--------------|

| 5  | Stakeholder Issue | When crossing rivers, would the gasline be underground? How would you cross the Yukon River? Does the route cut out there on the island on 17 Mile Slough? Does it cross the Nenana River? Would the route cross the Teklanika River?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| 6  | Stakeholder Issue | Is the project going to route the gasline to Nikiski and then branch off to Fairbanks, Anchorage, and other areas?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 7  | Stakeholder Issue | Is the plan for the route to take off at Livengood and go right along the foothills and hook up at Dunbar and follow the railroad easement? Would the route pass through the Minto Flats? Would the route cross the railroad easement? What is the proposed route in the Nenana area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 8  | Stakeholder Issue | Is the project planning construction to start in 2018? Are the facilities planned for this project the main components determining the timeline of construction; is the pipeline a comparatively minor piece of timing considerations?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 9  | Stakeholder Issue | Is there going to be a right-of-way? My trap line runs right there where you show this trail along the foothills by Dunbar and the railroad tracks. Is that going to kick me off my trap line? I am confused about Alaska LNG versus contact ASAP made with land owners in previous years for private proper access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 10 | Stakeholder Issue | Would the project avoid all Native allotments?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 11 | Stakeholder Issue | Would there be a spur to Nenana? Does this project bring gas to the Interior?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 12 | Stakeholder Issue | What kind of benefits is Nenana going to get from this project since the gasline would pass right by us? Would gas be less expensive for Nenana with implementation of this project? Comments regarding support of tax money being used for schools and training facilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 13 | Stakeholder Issue | Would there be jobs? For TAPS, road construction is what really created the outside labor problem because we had eight or nine contractors competing for labor. It was like the Gold Rush. There would already be roads most of the way for this project, but for TAPS we had to build roads first. Do you know what the labor demands will be for the pipeline near Nenana versus what happened for TAPS? Have you looked at the labor agreement for TAPS? It is the one drafted in the first place and the Native Corporations are not happy with it. TAPS were obliged to hire early on, then later made some big efforts late in the game right about the time when labor forces were being diminished and automation was being brought. For TAPS, there were teams on isolated sections of the pipeline. Would there be work camps like TAPS? Has the project been working with any unions? They have facilities for training. |  |
| 14 | Stakeholder Issue | I am concerned about the Minto Flats because they are prime breeding ground. The project should not put any structures there; it is prime habitat.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 15 | Stakeholder Issue | Would it be the legislature or AGDC to decide the off-takes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

| 1    | Stakeholder Action Item | Let field worker team know that moose hunting season starts August 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |
| 2    | Stakeholder Action Item | Get back to community with exact distance the LNG line will run from the TAPS line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
| 3    | Stakeholder Action Item | Get community comments regarding material sites to the Pipeline Routing Workshops.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 4    | Stakeholder Action Item | Inform GIS staff that secondary road does not exist.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 5    | Stakeholder Action Item | Get back to community with location of the compressor site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| 6    | Stakeholder Issue       | How big is the right-of-way? What is the temperature of the gas in the line? How much gas is there?<br>How many years would the gasline be in use? Is this project going to have pump stations? What<br>distance will this line be from TAPS? There has been a lot of discussion about paving the road along<br>the mountain. I like your project a lot better than the ASAP line. What is FEED?                                                                                                                                                                                |  |  |
| 7    | Stakeholder Issue       | Is the project going to ship the gas to Spain? Would gas go to the Lower 48 states? Does the lower 48 not want you selling gas there? Is it more profitable to sell the gas overseas? What if the economy had a really bad turn again; would that affect this project?                                                                                                                                                                                                                                                                                                          |  |  |
| 8    | Stakeholder Issue       | Is this red line [on map] for sure? ASAP was drilling over here to the west of this, so this corridor is<br>not quite what we have been looking at. I am concerned about the location of the compressor site [in<br>the vicinity of Wiseman]. Where is the compressor station the most near to Wiseman going to be<br>located? What distance would the Alaska LNG gasline be from TAPS? Is the information on the camp<br>sites for Alaska LNG confidential? Could you use the old Dietrich camp? We would rather you reuse<br>that one than disturb new ground for a new camp. |  |  |
| 9    | Stakeholder Issue       | There is not enough space for this corridor through Atigun Pass.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 10   | Stakeholder Issue       | If everything goes according to the plan, when would the project start construction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 11   | Stakeholder Issue       | Are these schematics on the Alaska LNG website? I had a lot of comments from ASAP I can email you with information on Wiseman's preferred materials sites.                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 12   | Stakeholder Issue       | How are the off-takes going to use the gas from there? Are the off-take points not like a propane bottle system or something similar?                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

| Alaska LNG. | MINUTES OF MEETING (MOM) | USAI-PE-SAMOM-00-000090-000<br>02-Nov-16<br>REVISION: FINAL |
|-------------|--------------------------|-------------------------------------------------------------|
|             | CONFIDENTIAL             | Page 2 of 2                                                 |

| 13 | Stakeholder Issue | ASAP had proposed material sites ringing Wiseman and Wiseman residents were very unhappy about their site selections.                                                           |
|----|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14 | Stakeholder Issue | How does this project benefit Alaska? How does it benefit the Wiseman area? Why is gas not less expensive in Alaska since the gas is extracted in the state?                    |
| 15 | Stakeholder Issue | Other community properties are not shown on map.                                                                                                                                |
| 16 | Stakeholder Issue | Secondary road on map does not exist.                                                                                                                                           |
| 17 | Stakeholder Issue | Where would the gasline go from Livengood? Would it go to Fairbanks?                                                                                                            |
| 18 | Stakeholder Issue | Would the project revegetate the path? Would the project avoid revegetating with invasive species? Along the roads the hydro seeders spray invasive seeds. Is the EIS complete? |
| 19 | Stakeholder Issue | If the project could avoid this path [in the vicinity of Wiseman], it may preserve the great view of the mountain.                                                              |

|------|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 1    | Stakeholder Action Item | There is an earthquake fault line at the bluff and terrible beach erosion. It would be a lot cheaper to go down to Trading Bay and then going across. Take that back to the design team. Q1 2016 to be addressed.                                                                                                                                                                                                                        |  |  |
| 2    | Stakeholder Action Item | Get back to the community with more information about how many dB the small air guns will be.                                                                                                                                                                                                                                                                                                                                            |  |  |
| 3    | Stakeholder Action Item | The beach erosion has resulted in that area losing up to 20 feet over the last 20 years from winds and earthquakes. Take that back to the design team. To be completed Q1 2016.                                                                                                                                                                                                                                                          |  |  |
| 4    | Stakeholder Issue       | Is this gas earmarked for market to be shipped overseas? Would there be generators like the pump stations for TAPS? Is this different from the TAPS we have now? Is there going to be a road alongside this pipeline? I understand that the smaller pipeline, the ASAP Project, is going to be involved in the bigger pipeline. So is it possible the smaller one can give us gas?                                                       |  |  |
| 5    | Stakeholder Issue       | Does Nikiski already have an LNG facility?                                                                                                                                                                                                                                                                                                                                                                                               |  |  |
| 6    | Stakeholder Issue       | There is a serious fault line where you are proposing doing directional drilling in Cook Inlet. Are rivers crossings an issue with archaeology? Is the pipeline planned to be buried under the Cook Inlet? How deep would you bury the pipeline; how far under water would it be at the lowest tide? The Tyonek area has lost a lot of beach down in the last 20 years, enough where if your pipe were 20 feet deep it would be showing. |  |  |
| 7    | Stakeholder Issue       | Would this project's gasline run alongside TAPS? Where is the proposed route in relation to the Chulitna River? Will the project have the route more finalized by the end of the summer?                                                                                                                                                                                                                                                 |  |  |
| 8    | Stakeholder Issue       | Why are you not staying onshore and going down to Trading Bay? At Talkeetna, you should go straight down the backside of Susitna here and go in through Trading Bay. Why does the proposed route go to Nikiski? Why not Point MacKenzie? Is there a pump station near Beluga?                                                                                                                                                            |  |  |
| 9    | Stakeholder Issue       | Is this project routing to Valdez?                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |

| 10 | Stakeholder Issue | Are the communities the gasline is going through or near going to be able to tap into the gas?                                                                                                                                                                                                                                                                                                       |  |
|----|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 11 | Stakeholder Issue | What company do you use for Cook Inlet surveys? Are you doing Cook Inlet surveys this summer?<br>Will your field studies adversely impact commercial fisheries?                                                                                                                                                                                                                                      |  |
| 12 | Stakeholder Issue | Who are the archaeologists? Was anyone from Tyonek tasked with researching cultural sites? Has the project looked into cultural sites near Tyonek? One of the problems we had with PacRim was their archaeologists hid their information from us. That is our people, our history. We do not want to run into that same problem again. There are house pits where the corridor is proposed to cross. |  |
| 13 | Stakeholder Issue | Are you going to be able to meet with the Tyonek Native Corporation about this project?                                                                                                                                                                                                                                                                                                              |  |
| 14 | Stakeholder Issue | Is Alaska LNG having any training or opportunities for Tyonek residents to work on the project from start to finish? Are you also going to get the information out there so people can get themselves together to be a part of the project?                                                                                                                                                          |  |
| 15 | Stakeholder Issue | Tyonek does not want to stop industry; we like the jobs, but we want to be responsible. We in Tyonek want our history preserved. It is not just house pits out there, it is burial sites.                                                                                                                                                                                                            |  |
| 16 | Stakeholder Issue | Would the testing signals affect fish returning? Would the noise from blasting affect fish and wildlife?                                                                                                                                                                                                                                                                                             |  |
| 17 | Stakeholder Issue | At Kaksik they had some blasting approved at 60 dB above, how does that compare to the small air gun?                                                                                                                                                                                                                                                                                                |  |
| 18 | Stakeholder Issue | Resident private property north of Ladd Landing.                                                                                                                                                                                                                                                                                                                                                     |  |
| 19 | Stakeholder Issue | Fault line on map                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 20 | Stakeholder Issue | Can you make sure the state knows Tyonek wants gas?                                                                                                                                                                                                                                                                                                                                                  |  |
| 21 | Stakeholder Issue | Would this project be union work?                                                                                                                                                                                                                                                                                                                                                                    |  |
| 22 | Stakeholder Issue | Tyonek has already lost our beluga whale hunting, so we are stingy for our fish. We are worried about more of our subsistence being disrupted and diminished. The Cook Inlet is our grocery store. Our village is only 180 people, but our tribe is 1,200 across the state. Our tribe is concerned.                                                                                                  |  |

| 1    | Cook Inlet G&G Summer Scope                  | Claire Joseph explained the planned scope of work for geophysical and geotechnical surveys in Cook Inlet, including: equipment, location, timing, and permitting. She said that the purpose of the meeting was to identify any potential subsistence conflicts with the engineering survey program planned for 2015 in Cook Inlet. Brenda explained that additional members of the Kenaitze Tribe has been invited, but attendance was likely low due to the upcoming holiday weekend.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 2    | Subsistence Uses - Fishing,<br>Moose Hunting | Brenda explained that it would be important for the summer engineering studies to avoid conflict with fishing season. She said that moose hunting occurs in coastal areas during the September/October timeframe, so if the Project was completing surveys in the later summer/early autumn in order to avoid fishing season, and if there was significant noise emitted above the water by the equipment/operations, then hunters could get upset. On the survey map, Brenda pointed to nearshore areas where moose hunting could occur, including: along western shore of Cook Inlet near Tyonek and Beluga and on the eastern shore of the Cook Inlet above the forelands and adjacent to Nikiski. During this discussion, no subsistence conflicts were identified for applicable marine mammals (i.e. beluga whales, killer whales, harbor seals, harbor porpoises).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 3    | Pipeline routing to avoid cultural resources | Brenda explained that the proposed pipeline routing between the villages of Tyonek and Beluga appeared to be located in a region of known cultural resources. Specifically, that region was known to be the site of a historical Dena'ina village, and that homes and burial sites are still located there. She requested that the Project avoid that area due to the cultural and historical significance to Alaska natives. She also explained that the area is currently being considered for designation as a cultural landscape by the National Park Service.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| 4    | Summer Camp                                  | Brenda asked whether the Project would be willing to collaborate and/or participate in a summer camp for kids which will be held during the second week of July 2015. Brenda explained that the purpose of the camp is to increase exposure of Alaska Native youth (primarily high school and middle schoolers) to science, technology, engineering, and mathematics (STEM). She said that she would like the youth to have a chance to see the geotechnical and geophysical equipment being used for Alaska LNG Project surveys in the Nikiski area, and she would like the youth to meet the engineering teams/crews with careers in STEM fields. The Kenaitze summer camp program is being planned in cooperation with and/or with funding from University of Alaska, Fairbanks (UAF) and the Bureau of Indian Affairs (BIA). A feature of this summer's program will be the EPSCoR sandbox to teach the youth about geology (https://www.alaska.edu/epscor/). Brenda said that the last possible date to arrange something would be July 1. Rosetta and Claire said that they would bring the request to the Project, and that there could also be opportunities for the youth to learn about other engineering/science fields through the environmental and cultural surveys also being conducted in the area. Another idea that Brenda raised was the opportunity to develop an Alaska LNG curriculum that could be used for math/science credits for schools or home schooling. |  |  |

| 5 | Additional Comments | Claire and Rosetta left extra copies of the slide pack which was used for discussion with Brenda so that Brenda could provide them to other members of the Kenaitze tribe. Claire, Rosetta, and Brenda also exchanged contact information, and Claire encouraged Brenda or other members of the Kenaitze Tribe to provide any additional comments or questions to the Project. |

| 1    | No Conflicts/Concerns | Mr. Monfor returned my call regarding potential subsistence conflicts for the Cook Inlet G&G Program. He said that they have 'no concerns' with the planned survey program. I offered to send him electronic copy of the survey program summary and he agreed, providing me his email. He stated he would plan to share the information with his Board of Directors. No further communication is planned. |  |  |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |
| 1    | Stakeholder Action Item | Keep Minto informed of workforce development updates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |
| 2    | Stakeholder Issue       | Is the state doing this project? Is there another company that is doing the same thing? What is the size of the pipe you are going to use? Who would buy the gas from you? Would you bury the pipeline? Is processing done on the North Slope or the terminus before the gas is shipped? How long would the gasline last, and how much gas is there? How does dirt come out when you are drilling? How does horizontal directional drilling work? Are you doing anything like what was done on the Kenai? We have a 48 inch oil pipe now, and it is only what, one-third full? Is that how it will be with the gas? What about filling up the other two-thirds of the oil pipeline with a gas pipe and sticking it through the whole thing? I do not understand this other ASAP Project—you have two companies trying to do the same thing. What is going to happen? Will one be pushed out? Who is funding them? Is it the same group? Minto is impatient for a gasline to be constructed. |  |  |  |
| 3    | Stakeholder Issue       | How is so much money being invested on a hope for a project? Would burying the pipeline have an added cost? It seems ineffective to be paying for both Alaska LNG and ASAP right now. Why would the state not approve the financial package for the project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |
| 4    | Stakeholder Issue       | Is the project they are proposing in Fairbanks competition for Alaska LNG? How is getting gas from here versus the lower 48 is more effective since it seems to be so abundant down there. Why Alaska?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |

| 5  | Stakeholder Issue | How would you cross rivers? How would you go underneath rivers? Would you cross the Yukon River or Tanana rivers, and how would you cross them?                                                                                                                                                                                                               |
|----|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6  | Stakeholder Issue | Where is the gasline routed? How far away would your gasline be from Minto?                                                                                                                                                                                                                                                                                   |
| 7  | Stakeholder Issue | What is the time frame on this project?                                                                                                                                                                                                                                                                                                                       |
| 8  | Stakeholder Issue | When does construction start?                                                                                                                                                                                                                                                                                                                                 |
| 9  | Stakeholder Issue | Would the project try to get gas to all the villages all the way down the line? We were told they were, but lately I have not heard anything. Is the project thinking maybe 25 miles from Minto? Would size spur line would you need to get gas to Minto? Will you know where the project off-takes will be by the end of summer? Would any villages get gas? |
| 10 | Stakeholder Issue | How many meetings have you had? Are you looking for support of the project? Exactly what kind of feedback are you looking for? If the project presents to the school (Minto would like this to happen), tailor it to different ages. The project does not need to come to Minto often, only when there are critical updates.                                  |
| 11 | Stakeholder Issue | Did you let the village council know you were coming? Next time you come to Minto, bring a workforce development coordinator to give us direction on schooling or training to work on the project.                                                                                                                                                            |
| 12 | Stakeholder Issue | Unless you provide benefits to Minto, we will not approve the project.                                                                                                                                                                                                                                                                                        |
| 13 | Stakeholder Issue | Are there any studies on the environmental footprint of processing the gas?                                                                                                                                                                                                                                                                                   |
| 14 | Stakeholder Issue | I do not want anything in the water. We have enough trouble getting our salmon. You are going to do something to the fish putting in a 48 inch pipe down under the river.                                                                                                                                                                                     |
| 15 | Stakeholder Issue | How do you fix a spill or a leak with water crossings, such as the Yukon River?                                                                                                                                                                                                                                                                               |
| 16 | Stakeholder Issue | How safe would the gasline be? What precautions are being taken for sabotage of the gasline?<br>Someone shot a hole in the oil pipeline. What happens if someone does the same thing to a gasline?                                                                                                                                                            |

|------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 1    | Stakeholder Issue | Questions about the size of the tankers. Questions regarding the Cook Inlet crossing.                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 2    | Stakeholder Issue | Stressed reaching out to the area families and encouraged often and good communication with them.                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 3    | Stakeholder Issue | The group asked about the proposed LNG facility area. The group was most concerned about potential leaseholders in the area. An attendee asked about the size of the proposed LNG carriers and the Cook Inlet pipeline crossing.                                                                                                                                                                                                                                                 |  |  |
| 4    | Stakeholder Issue | The group advised that it would not be possible for any beach work to take place in July due to large cables crossing the beach from the high bluff and increased activity. They did not even think we could get large equipment through. Attendee looked at the tide table and said July 4th has optimum tides and likely will be a very busy weekend on the beach getting sites ready.                                                                                         |  |  |
| 5    | Stakeholder Issue | Participants suggested that focusing communication on the potentially affected lease holders was best. It is beneficial that the lease holders would get contacted by the Alaska LNG team when beach work was coming up. Attendees encouraged the team to visit a working site, and stressed reaching out to the area families. An attendee invited Alaska LNG to attend a fisherman's picnic on/near July 4th. Early and frequent communication with leaseholders is important. |  |  |
| 6    | Stakeholder Issue | The board did not think it would be necessary to attend their annual meeting later in June. They suggested a visit in the fall with an update on the outcomes of the field season.                                                                                                                                                                                                                                                                                               |  |  |
| 7    | Stakeholder Issue | The group briefly asked about the marine traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 1    | Stakeholder Action Item | Add contact information for citizens advisory panel request from John Strasenburgh.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 2    | Stakeholder Action Item | Discuss need and timing for regional citizens advisory councils.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 3    | Stakeholder Action Item | The Montana Creek bridge and Sheep Creek bridge are going to have replacement construction started in 2016.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 4    | Stakeholder Issue       | Is this project a public-private combined operation? How much of the 2,000 foot corridor would be cleared? For choosing pipe metal, is Alaska LNG protecting for corrosion on the inside or on the outside? If this project goes through, is there a chance it will delay or end the proposed Susitna-Watana Dam? There are a lot of people who do not want the dam. Would there be a gas conditioning facility? What about propane from the North Slope? Could an LNG facility in Fairbanks someday pull propane out of the pipeline gas? How are other projects, such as the Fairbanks North Slope LNG study and smaller LNG projects in Cook Inlet affected by this project? Is this project connected to other proposed LNG projects in Alaska? I am supportive of the concept for this project, but it does seem like it is advancing in a complicated way. What do you think about in-state demand? |  |
| 5    | Stakeholder Issue       | How much does it cost for a facility at the off-take to convert the pipeline gas into gas for utilities? In general terms, is it millions, tens of millions, or hundreds of millions for each off-take? How is the current state fiscal circumstance going to affect this project? There is a pending state government shut down. If something costs more but would benefit a community or individual, will you consider benefits aside from monetary ones?                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 6    | Stakeholder Issue       | Is the pipeline actually buried when crossing Cook Inlet? How would you cross the Yukon River? Would there be a bridge?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |

| Alaska LNG. | MINUTES OF MEETING (MOM) | USAI-PE-SAMOM-00-000095-000<br>02-Nov-16<br>REVISION: FINAL |

|             | CONFIDENTIAL             | Page 2 of 2                                                 |

| 7  | Stakeholder Issue | Would the pipeline corridor be parallel or near the existing pipelines that cross the Cook Inlet? Does the proposed route have a 2,000 foot corridor for the length of the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 8  | Stakeholder Issue | How come there are two places on the map where the route could goone to go west and one to go east? If the route would divert from the highway here, why would this be a good place to have your off-take to go to Anchorage?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 9  | Stakeholder Issue | When will the route for the gasline be finalized? Would a special legislative session have to be after the regular session is over? No one makes decisions on these things overnight; should this schedule be shifted by six months?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 10 | Stakeholder Issue | How about land status along the corridor? Have you made deals with the land owners or is that still in negotiations? How would access and cross-paths be handled for maintenance and construction roads for the pipeline? How would this project handle public access to the pipeline corridor once it is in operation? Access is very importance to local communities for support of the project. There is a lot of confusion over access rights for existing pipeline and utility corridors. Access was closed for the Beluga powerline. Design benefits for the pipeline which are not quantifiable are important, such as access to my cabin. There is more private property on the eastern route. The Montana Bridge and Sheep Creek Bridge are going to have replacement construction started in 2016; just a heads up in case that would affect your project. If there is a temporary construction road on private property, will an effort be made by the project to reclaim it before moving on? |
| 11 | Stakeholder Issue | How many off-take points do you anticipate? Is there a list of the five to ten potential off-take points right now? Would there be an off-take for Wasilla or with Enstar?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 12 | Stakeholder Issue | The coal fire power plants, such as the one in Clear, are waiting to hook on to gas. It would be a big plus to get natural gas to run the electricity instead of coal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 13 | Stakeholder Issue | It is important for the project to come out to do outreach and stay in contact with people. I suggest having a citizen's advisory committee or board for this project. Perhaps there could be multiple citizen committees organized by geography along the pipeline route. ASAP could have done a better job with communication when their citizen committee was formed, and I want to make sure Alaska LNG stays in contact with me if they form a citizens group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 14 | Stakeholder Issue | When you determine your final corridor to be cleared, will you allow locals to go in there and cut or collect firewood? This has been done in the past for other projects with varying restrictions and logistics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 15 | Stakeholder Issue | Please hire local people for field work, including the bear guards. By local, I mean from the local community not just from Alaska. If you are going to work in our area, it is good to hire Alaskan, but the better thing is to hire from Trapper Creek. Can you put local community hire as a goal for your study plans?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 16 | Stakeholder Issue | The proposed route deviates from TAPS, which puts demands on the archaeological reconnaissance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 17 | Stakeholder Issue | How would the project deal with casual recreation use of the pipeline corridor, such as travel with off-<br>way vehicles and snowmachines, once the gasline is in operation? There is confusion over legal<br>rights of access. The corridor is going to attract moose, and residents will want to use the corridor<br>like the Intertie powerline corridor is used now for recreation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |
| 1    | Stakeholder Issue | Is this is a 2,000 foot corridor? How much of the corridor would be cleared, and what is the process for narrowing down to the final corridor width? Would the gas from the North Slope come into play if we needed more on a winter's day, and the rest would be sold on the international market? The project just got a conditional permit to export 2.55 billion cubic feet (bcf) per day, is that a preferred number on your side against the 3.5 bcf? Is there going to be a road along the gasline corridor for maintenance? How far apart are the block valves? Do you prefer to have road access to block valves? The ASAP Project and the Alaska LNG Project need to work together. Is there going to be a compressor station in the Trapper Creek area? What is the footprint for a compressor station?. |  |  |
| 2    | Stakeholder Issue | Would the project use the existing LNG facility in Nikiski? Is there a reason to use Nikiski instead of Tyonek or Point MacKenzie?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| 3    | Stakeholder Issue | My thought is it would be less expensive to build the LNG facility in Point MacKenzie than pay the cost of running the pipe across the water to Nikiski. Who would pay for the off-take infrastructure?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| 4  | Stakeholder Issue       | I can see why the proposed route is across the Chulitna River at this pinch point, but it also crosses<br>Troublesome Creek where there is a wayside. It would be much less destructive to this whole area if<br>you could cross and exit north of the confluence. Mileposts 131 and 127 are major access points for<br>recreational cabins in this area south of Denali National Park. The closer the route could stay with the<br>highway and avoid getting back into the recreational cabins would be greatly appreciated. The<br>pipeline is still on the wrong side of the Parks Highway. You should be on the east side of the Parks<br>Highway; we have a recreational trail over there and it is all public land except for a section line going<br>through a couple agricultural parcels on the other side. There is a clear alternative; you could easily<br>cross the east side of the highway and stay there for the next ten miles going south. Why is there an<br>eastern and a western route at the southern end? Why is the west route preferred by Alaska LNG?<br>Did project engineers adjust the gasline route in response to our previous concerns?                                                                                                                     |  |
|----|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 5  | Stakeholder Issue       | Why use Nikiski over Tyonek or Point MacKenzie for the LNG facility? Another place for the LNG facility would be out there by Point MacKenzie. Point MacKenzie is trying to get that road across from Anchorage, and this project would be a good reason to do that. It would be like two projects in one. After hearing response to reason for Nikiski's selection, commenter stated, "I knew there was more to it than I knew. Sounds good."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 6  | Stakeholder Issue       | How long would each work camp be in operation? Would there be sections put together during summer which would require project staff coming back in the winter to finish?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 7  | Stakeholder Issue       | ADOT&PF suggested an easement and road in the Trapper Creek area to get the gravel out. When are you going to get permission from the private property owner for this phase? What if a land owner does not want you to go across their private property, and Alaska LNG says it is necessary to go across. What do you do then? I have heard the corridor will still be accessible to the public and I have also heard the corridor would be locked off from the public; which is correct? The corridor is the state public land, so we have the right to access it. The corridor would likely be used by snowmachines and off-highway vehicles. My property is accessible by Parks Highway mileposts 105, 106, 108, 109, how am I supposed to get to it if project trails are cut and some turned into right of ways? I am particularly concerned when the project would lay pipe five miles west of the highway, but not when the route is right along the highway. Is the project concerned with people crossing over the corridor? Would it be safe for us to cross? The corridor could make it easier for outsiders to come in and tear things up in the Trapper Creek area. Privacy and our ability to deal with non-local recreationists in the area are important to Trapper Creek. |  |
| 8  | Stakeholder Issue       | Could you transport gas with barges from Nenana, and taking them down the Tanana and Yukon rivers? What about Anchorage and Mat-Su and using Cook Inlet gas? To get domestic gas from this pipeline, where on this west route would you tap into it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 9  | Stakeholder Issue       | When is the next meeting? If we give you an email can you let us know about the meetings? I learned from a neighbor about this meeting tonight. October would be a better time for the next meeting in Trapper Creek because it is after moose season; you will get better attendance then. When you are using a helicopter in the Trapper Creek area, people question why. If you can announce on the radio when that is going to happen, we will be a lot more receptive out here. The project could tell us what is going on between this mile mark and that mile mark, for this week or whatever. The FERC website is hard to navigate. Are any of your resource reports online? Trapper Creek is savvy to adjusting the gasline route, and we want concrete reception for our comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 10 | Stakeholder Issue       | To what agency are you submitting project resource reports?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 11 | Stakeholder Issue       | What if the project does need to route through my land? What benefits are you bringing? Are you establishing hardened trails? Those who are impacted have to see benefits from the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 12 | Stakeholder Issue       | Would the whole corridor be cleared? Between the Chulitna Bridge to the Susitna Bridge is the sensitive area of the route for Trapper Creek.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 13 | Stakeholder Issue       | The pipe must cross between here and the Cook Inlet, including passing over several major faults.<br>How does the project do that? Would you elevate the pipe? If the land shifts and the pipe moves thirty feet, I am concerned it is not going to withstand it. Alaska LNG needs to study the maps and the terrain carefully to pick out the problems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 14 | Stakeholder Issue       | How would you access the pipe or how would you respond if there were an issue where it is underground?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 15 | Stakeholder Issue       | Would the pipe still be underground when passing through wetlands? The work camps could impact wetlands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 16 | Stakeholder Action Item | Potential gravel pit with existing ROW easement from Mat-Su Borough                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 17 | Stakeholder Issue       | Trails maintain access all year around: 9 Mile Creek and Trapper Lake.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 18 | Stakeholder Issue       | Where the pipe does need to come above ground, will it be high enough for wildlife to cross under it like TAPS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |

| 19 | Stakeholder Issue       | On the east side of the Parks Highway, the highway would be more visible from the ridgetop. If the route was on the west side and the Parks Highway was still screened, you would see the Alaska Range and possibly enhance the view from the Parks Highway. The gravel pits from the highway construction have finally grown in, and they are almost invisible. I imagine you will need considerable gravel for this project, and it will be ugly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 20 | Stakeholder Issue       | Would the compressor stations be noisy? There are interesting acoustics in the Trapper Creek area as I can hear the trains seven miles down the highway in Talkeetna.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 21 | Stakeholder Issue       | Could the state build a bike trail on the right of way? Could there be a bike path or snowmachine path adjacent to the corridor in the Trapper Creek or Denali State Park area? A road or path through Denali State Park would have benefits. It would be great to get some recreational benefits out of this project. The work camps could impact salmon fishing holes and recreational trail use. Did you ever get the Matanuska Trails information? The corridor would likely be used for travel by snowmachines and off-highway vehicles, with advantages and disadvantages to that access. Concerns noted for the route passing too close to access points for recreation cabins south of Denali National Park and too close to Troublesome Creek which has a wayside used by recreationists. Comment that the east side of the Parks Highway if probably better, but a lot of hunting ground may be impacted. Mileposts 131 and 127 are major access points for recreational cabins in this area south of Denali National Park. The closer the route could stay with the highway and avoid getting back into the recreational cabins would be greatly appreciated. The pipeline is still on the wrong side of the Parks Highway. You should be on the east side of the Parks Highway; we have a recreational trail over there and it is all public land except for a section line going through a couple agricultural parcels on the other side. The corridor could make it easier for outsiders to come in and tear things up in the Trapper Creek area. Privacy and our ability to deal with non-local recreationists in the area are important to Trapper Creek. |
| 22 | Stakeholder Action Item | Take routing concerns back to design team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 23 | Stakeholder Action Item | Consider radio PSAs to advertise meeting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 24 | Stakeholder Action Item | Consider communication system on the radio for field work, such as helicopter use.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1  | Stakeholder Issue | When the gas comes from the off-take is it suitable for utility use? How many compressor stations would there be and would they be connected to the road system? If the pipeline goes to the western route, are you planning on tapping into the Cook Inlet Beluga gas and taking it to Nikiski? Is there going to be an access road beside this route?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| 2  | Stakeholder Issue | Is there a reason Alaska LNG could not build an LNG facility at Point MacKenzie? When the gas gets to Nikiski, what will it take to process it into LNG?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 3  | Stakeholder Issue | Does this project need to tap into the PFD? I would not mind that, especially if there was a benefit on the other end.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 4  | Stakeholder Issue | What if in-state demand grows? Are the big producers willing to accommodate this need over export needs? Had there been legislation for the people to vote on this? What if one of the big three companies pulls out because they have an alternative investment that might give them a higher rate of return?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 5  | Stakeholder Issue | Where are staging areas located?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 6  | Stakeholder Issue | Why is the western route the preferred route? Having it on the west side of the Susitna River bypasses Point MacKenzie and Anchorage. Would it not make more sense to run to Point MacKenzie and follow existing pipeline down to Nikiski? Is the route selection political? The project should evaluate Tyonek very carefully because they are important people. It makes much more sense from an environmental standpoint and a backup standpoint to go through Point MacKenzie. It would be a natural progression in the industrial development of Point MacKenzie. I support going to Nikiski, but we would like the opportunity to tap into the gasline at Point MacKenzie—we cannot do that if you go on the west side of the river; there is a gasline there from Nikiski to Anchorage that is already permitted. The western route would cause years more work for ASAP to be built as the backup plan if Alaska LNG did not go through. You accomplish multiple things by choosing the eastern route. I have got companies that want gas at Point MacKenzie and they will not be able to get it on the western route without building a 55 mile extension from Deshka to get it to the port. |  |
| 7  | Stakeholder Issue | Where are the off-takes and when will the location of them be decided? We cannot connect to the line if it is on the west side of the Susitna River.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 8  | Stakeholder Issue | Would the community have another supplier of gas other than Enstar? How much of the existing (TAPS) right-of-way could be used to bring the pipeline to the Fairbanks area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 9  | Stakeholder Issue | What is this project doing to do to protect local jobs and hire locally? How are you going to ensure that the people who live here are going to benefit from the project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 10 | Stakeholder Issue | There are a lot of resources, unions and non-unions, who have trained people from TAPS. The University of Alaska Anchorage (UAA) and the Alaska Vocational Technical Center (AVTEC) in Seward have great training for something like this coming up, but I am still afraid we will not have enough people and the work force will be less than 60 percent when it comes around.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 11 | Stakeholder Issue | The western route would have to cross ten salmon streams, versus zero on the existing line on the east side.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 12 | Stakeholder Issue | There is a game refuge along the western route that would need to be crossed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 13 | Stakeholder Issue | What about sled dogs, trespassing, and right-of-way adjustments?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| 1    | Stakeholder Issue | How is this concept different from the one before 2012? Is the proposed route just not going down through Canada?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 2    | Stakeholder Issue | It is going to be a huge cost for the state to be responsible for the gas after the off-takes. Who would pay for a spur line to Fairbanks? What does the state's 25 percent equity share mean? Would Alaskans get a deal on gas prices because they are a part-owner in the project? Who regulates gas prices? Does the gas pipeline not fall within oil taxes? Does the project have a sense of the cost of the gas for Fairbanks, Anchorage, and Beluga? How much has the project spent in field studies this year? Has the state committed funds through this cycle for pre-FEED? How can the state come up with its share of the money, particularly with impending government layoffs? Is the state locked into anything contractually? |  |  |
| 3    | Stakeholder Issue | To whom would you sell the gas? Since the State of Alaska would have 25 percent of the costs, would the state get 25 percent of the gas? I am concerned about state funding for the project and its feasibility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| 4  | Stakeholder Issue | Alaska LNG could save a lot of money putting the LNG facility at Point MacKenzie. It would be faster<br>and Point MacKenzie could hook into the gas line and ship out on it. It would save money with other<br>companies (REI) putting money up to construct an LNG facility at Point MacKenzie. Point MacKenzie<br>would have an LNG facility, and then Alaska LNG could do an offshoot to Beluga. Point MacKenzie is<br>a better route—you could more easily get gas to Fairbanks from there. The oil companies are forcing<br>this route upon us. Coming from Point MacKenzie, the route would not have to cross the Cook Inlet at<br>all. It would eliminate all that permitting. |
|----|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5  | Stakeholder Issue | When would the state see its gas sold? Which would take the longest to construct out: the pipeline, LNG facility or GTP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 6  | Stakeholder Issue | Alaska LNG seems to forget that the Mat-Su Borough and Point MacKenzie can be the next Prudhoe Bay in Alaska.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 7  | Stakeholder Issue | What is the definition of an off-take? After the off-take, who is responsible for the gas?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 8  | Stakeholder Issue | Is the gas going into the Enstar system as is? Who is going to figure the cost of distribution?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 9  | Stakeholder Issue | It seems like there is a lot of duplicate studies and waste. Can the project use older data?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 10 | Stakeholder Issue | Has the project engaged some of the companies out of Wasilla and Houston to help with work? Can you give me names of companies in Wasilla that Alaska LNG has used?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 11 | Stakeholder Issue | Is the project going to help pay for community infrastructure needed from the influx of employees?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12 | Stakeholder Issue | How many workers would the project put here? How is the Mat-Su Borough going to fund school and roads? Would the costs of infrastructure be negotiated by the state?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 13 | Stakeholder Issue | Has Alaska LNG been talking to Donlin Gold about their proposed gold mine? Donlin is going to need gas in a few years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 14 | Stakeholder Issue | No one in the Houston-Big Lake area found helicopter traffic from the project last year problematic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 15 | Stakeholder Issue | Nikiski has a commercial fishing fleet. Alaska LNG would need to bring tankers. It would be a shallow area, and the project would have to shut commercial fishing down. There would be a new law from Homeland Security on tankers coming in from protection. We do not have that problem at Point MacKenzie. We do not have a commercial fishing fleet; the intelligent choice is Point MacKenzie.                                                                                                                                                                                                                                                                                   |

| 1    | Stakeholder Action Item | Contact AK Supply about labor modules.                                                                                                       |  |  |
| 2    | Slakenoloer Action tiem | Advise businesses to sign up on the website if they are interested in work, and note businesses who gave contact information at the meeting. |  |  |

| 3  | Stakeholder Issue | Who are the project partners? Is the State of Alaska a partner? Among the Alaska LNG project partners, who runs the project? What is LNG? Where is the gas coming from? The gas from Cook Inlet is cleaner. What kind of energy will be used to run the facilities? Is the gas from coal? Is this coalbed methane (CBM)? Is coal in the Beluga formation? Is the gas reservoir onshore or offshore? Where is the hydrocarbon removed? How many compressor stations would there be? Confusion of the Alaska LNG Project with a proposed gas project by REI. |
|----|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4  | Stakeholder Issue | Are the Point Thomson facilities onshore or offshore? Will Point Thomson utilize nearby fields?                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 5  | Stakeholder Issue | What is the daily gas capacity of the plant? Where is the GTP in relation to central compressor plant (CCP)? What else is being taken out of the gas besides carbon dioxide? What does the project do with the methane, propane, and butane? Where are they separated and are they used by the facilities?                                                                                                                                                                                                                                                 |
| 6  | Stakeholder Issue | Where is the current and proposed LNG facilities in Nikiski? Questions about shipping operations from Nikiski and port security.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 7  | Stakeholder Issue | If the pipeline is bonded, who would bond it? Make sure the project is bondable. Where is the project funding coming from? Comment on the project cost, funding, and concern about the State of Alaska's current budget situation. What is the state's cost to participate in Pre-FEED, FEED, and execution? Does gas go from Point Thomson to the closed end fund (CEF)?                                                                                                                                                                                  |
| 8  | Stakeholder Issue | I do not know if the State of Alaska can afford this project with its current budget situation. Is the project on track and are there any showstoppers? Who is going to use the gas? Are the markets not allowed to be discussed yet? What are the biggest challenges overall?                                                                                                                                                                                                                                                                             |
| 9  | Stakeholder Issue | For pipeline construction methods, is anything used to weigh down the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 10 | Stakeholder Issue | Is the project going underwater to cross the Cook Inlet? What does the sea floor look like in Cook Inlet?                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 11 | Stakeholder Issue | Is the current proposed route shorter, and is the corridor routing already decided? Does the gasline route follow TAPS?                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12 | Stakeholder Issue | Where would the pipeline cross the Cook Inlet? Question about the routing junction of the east corridor alternative from the preferred route. Is the east route still an option? What is the preferred route? Why was a route to Point MacKenzie not selected? Why is the gasline route not following the Parks Highway?                                                                                                                                                                                                                                   |
| 13 | Stakeholder Issue | Why is the project not routing the gasline to Valdez?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 14 | Stakeholder Issue | Question on the schedule and general steps for the project timeline. Why is the project taking so long? What is the future of the project? When is the go or no-go decision made for the project? What are the Pre-FEED steps? When does the project get the permits?                                                                                                                                                                                                                                                                                      |
| 15 | Stakeholder Issue | How soon would the construction start?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 16 | Stakeholder Issue | When will the project start shipping gas to markets? When is the delivery date? When will the gasline be finished and when will the gas start flowing?                                                                                                                                                                                                                                                                                                                                                                                                     |
| 17 | Stakeholder Issue | Why purchase the land before the project knows where the LNG facility is going to be? Does the project cross the University of Alaska and Mental Health Trust lands?                                                                                                                                                                                                                                                                                                                                                                                       |
| 18 | Stakeholder Issue | What is the status of the Municipal Advisory Gas Project Review Board (MAG)? How does that impact us?                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 19 | Stakeholder Issue | We hear that Fairbanks is fabricating a 32-inch pipe for a gasline to meet the main gas export line?                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 20 | Stakeholder Issue | What are the studies the project is now looking at? Where are field studies occurring?                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 21 | Stakeholder Issue | Community members would like to see some field workers attend meetings to talk about what they are seeing and their experiences. Questions about TransCananda and the article in the paper recently. The project should bring literature for meeting attendees to take home. Can the project provide GIS information?                                                                                                                                                                                                                                      |
| 22 | Stakeholder Issue | A person from NANA Management Services inquired about any project updates to date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 23 | Stakeholder Issue | Where does the non-Free Trade Agreement (non-FTA) announcement by the government fit on the plan of the project? Does the EIS process look at gas markets and who handles the shipping of the gas?                                                                                                                                                                                                                                                                                                                                                         |
| 24 | Stakeholder Issue | Concern on how the project would advance with Governor Walker's administration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 25 | Stakeholder Issue | What are the sub-contractor guidelines? Many businesses want work. Concerns raised on contracts<br>and the transparency of contracting. How do businesses get in on the project? I feel like businesses<br>are not being engaged and frustrated that businesses are not getting any contracts. There are<br>engineering components and businesses who want opportunities to work on this project. Where are<br>the project procurement staff located? Chiulista is interested in providing work camps in the future. A<br>NANA representative wanted contact information to provide geotechnical services. Great Northern<br>Engineers is interested in pipeline design work. AK Supply would like to be contacted by the project.<br>An attendee had interest in selling life insurance to the project as a benefits package. |

| 1    | Introductions     | In his introduction, Dave Martin, the president of UCIDA, explained that UCIDA had been participating in the Alaska LNG Project regulatory processes (such as the waterway suitability assessment), and that the Project had been receptive to feedback and comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |
| 2    | Project update    | Claire Joseph presented a Project update to the group. She introduced Josselyn O'Connor and Michael Nelson. She thanked the group for the invitation to provide the update and thanked the group for the ongoing coordination and communication that has occurred through the waterway suitability assessment process. She explained that since last year, the Project formed a Joint venture, and began engineering design work. The Project continues to collect data to help inform design and construction planning. Some data collection will be conducted in and around the Nikiski area, including onshore and offshore. The Project marine crews in particular are familiar with the other waterway activities which occur in Cook Inlet during the summer months, and the Project will not be interfering with those activities. Claire explained the USCG-led waterway suitability assessment process and thanked UCIDA for their participation over three days in the workshops. She indicated there is a planned comment period that is set to begin soon. She explained the FERC pre-filling process and provided several ways for audience members to learn more about the project, including searching the FERC docket for PF 14-21, looking on the Alaska LNG website, calling the Project toll free number, or getting in touch with Josselyn O'Connor, who is the local contact for the Nikiski/Soldotna/Kenai areas. |  |  |
| 3    | Stakeholder Issue | United Cook Inlet Drift Association (UCIDA) noted the project had been receptive to feedback and comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

| 1    | Project update                  | Larry Persily, Kenai Peninsula Borough Oil & Gas Special Assistant, gave a general update on the AK LNG project. Questions from the attendees: What's happening in the global LNG market? A. Not very good, but most likely will rebound. Will the State of AK be hiring to work on this project? - A. State doesn't really have the expertise in LNG marketing. Not at this time. What will happen to the ConocoPhillips LNG plant? - A. Didn't know beyond 2015. |  |  |
| 2    | Stakeholder Issue               | What is happening in the global LNG market?                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |
| 3    | Stakeholder Issue               | What will happen to the ConocoPhillips LNG plant?                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| 4    | Stakeholder Issue               | Will the State of Alaska be hiring for work on this project?                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |

| 1    | Stakeholder Action Item | Check on drainage planning that may affect Dalton Highway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 2    | Stakeholder Action Item | Use GCI TV advertisement next time to advertise meeting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 3    | Stakeholder Issue       | The road at Point Thomson affected the drainage resulting in bad floods this spring. After the work on Point Thomson is when there was flooding on the Dalton Highway. Did you put the Point Thomson information on paper for us? What kind of transportation is used in the Point Thomson area? There used to be places the caribou cooled off, and now they do not really go there anymore because of the planes going by too much. I have noted a change in the caribou migration. How often do Point Thomson flights occur? |  |
| 4    | Stakeholder Issue       | There are not many people here, does this count as a meeting? There should have been more advertising and contact with the local officials. We got the postcards and hear confirmation of radio advertisements, but we recommend a GCI TV advertisement for the next meeting.                                                                                                                                                                                                                                                   |  |
| 5    | Stakeholder Issue       | Barrow residents know our environment and travel in it by boats.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

| 6 | Stakeholder Issue | How are you going to protect the fish in the river? Some of the rivers change; they meander and they grow, and then there is a new route. Dams in the lower 48 block the rivers. Barrow's top priority is wildlife and fish; we have to protect them. |
|---|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| - |                   | wildlife and fish; we have to protect them.                                                                                                                                                                                                           |

| 2  | Stakeholder Issue       | Where would the pipeline be above ground and where would it be buried? Is the majority of the pipeline going to be buried? What is the design for the pipe? Some of us might be thinking the pipe would have gasoline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 3  | Stakeholder Issue       | Can you point out Point Thomson on the map? How far is it from the ocean? What is the height of the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 4  | Stakeholder Issue       | Who would buy the gas? I would like an economic study done by Alaska Native Regional Corporations. Other parts of Alaska must grow besides the Southcentral area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 5  | Stakeholder Issue       | How would the pipe get here? Where would the LNG facility potentially be designed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 6  | Stakeholder Issue       | How long is the construction going to be?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 7  | Stakeholder Issue       | Is Fairbanks going to get natural gas? Does Fairbanks support this project? What about the villages outside the North Slope and south of the mountains? Nuiqsut is the smallest community, so we have to help our neighbors. Nikiski and Anchorage have gas, but what about people in western Alaska or people in the Bethel area?                                                                                                                                                                                                                                                                                                                                                                             |  |
| 8  | Stakeholder Issue       | What about centralizing in Fairbanks? It could provide economic growth for Fairbanks and Fairbanks could be an export hub.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 9  | Stakeholder Issue       | When people write studies and gather data, do they come up here and look at our land?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 10 | Stakeholder Issue       | Would workers come from all over the United States for this project? It was that way for TAPS. We need education.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 11 | Stakeholder Issue       | Is the project going to impact the permafrost? The permafrost is going to melt from all this structure. Would there be thermistors in the ground to prevent the permafrost from melting?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 12 | Stakeholder Issue       | What happens if the buried pipeline breaks underground? What about the permafrost in a spill? Would the pipeline leak on the grass, and then would the caribou (who eat the grass) and us (who eat the caribou) be affected by a spill?                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 13 | Stakeholder Issue       | I am concerned about how many years we have not seen the Porcupine Herd because of the spider web of pipelines. Can you do studies to keep track of the caribou? We have heard caribou are stuck on the other side at the Melanie Point Pipeline, and being on the state side, they only require five feet minimum height. It impacts their calving and insect relief efforts. No more caribou for us; the migration is always displaced. How would a leak impact caribou? Would a leak cause disease in the caribou? Caribou eat grass, and we eat caribou. How would construction and its timing and length affect caribou? So many villages depend on the caribou migrations and the return of the caribou. |  |
| 14 | Stakeholder Issue       | The project could route from Point Thomson to Fairbanks. What about routing to Nome and other places in west-central Alaska? It would shorten the route to go to western Alaska and export to Asia from there. It would shorten the time to recoup the state's investment. We could provide gas to Bethel from the port in Nome.                                                                                                                                                                                                                                                                                                                                                                               |  |
| 15 | Stakeholder Issue       | Are there archaeological sites on the North Slope? Why are the archaeological sites secret?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 16 | Stakeholder Issue       | Did the Dalton Highway (Haul Road) wash out from drainage being affected by pipelines and other infrastructure? Would this project impact drainage and hydrology?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 17 | Stakeholder Action Item | Bring a pipeline engineer to the next meeting. Q2 2016.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 18 | Stakeholder Action Item | Alaska LNG will ask the Alaska Department of Transportation and Public Facilities (ADOT&PF) why the haul road (Dalton Highway) washed out. Q1 2016.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| 1    | Report         | Overwhelming support for the project in discussions with attendees. Many interested in potential for employment and economic benefits to the community. Two mentioned they were very happy with their negotiated deal selling their property to AK LNG. One discussion between Josselyn O'Connor and Constance & Joe Nicks (landowners in the Nikiski area inside Miller Loop). Josselyn will connect with them next week. |  |

| 1    | Discussion/Presentation         | Josselyn O'Connor presented to the Central Peninsula Hospital at their regular monthly board of directors business meeting. Josselyn gave a 10 minute overview of the scope of the project, key players, ongoing field studies in Nikiski, land acquisition, FERC scoping schedule. Questions from the group: 1. how big are the LNG carriers and 2. what is the timeline? |  |  |
| 2    | Stakeholder Issue               | How big are the LNG carriers?                                                                                                                                                                                                                                                                                                                                              |  |  |
| 3    | Stakeholder Issue               | What is the timeline for this project?                                                                                                                                                                                                                                                                                                                                     |  |  |

| 1    | Project Update to Copper River<br>Native Association Chief Exectuve<br>Officer | On Friday, July 31, 2015 Michael Nelson, Socioeconomic lead for the Alaska LNG, Rosetta Alcantra, contractor for Alaska LNG met with Jerry Isaac, Chief Executive Officer for the Copper River Native Association (CRNA). Jerry shared his background and experience both as the former president of the Tanana Chiefs Conference (TCC) and with CRNA. Michael also shared his background and they discussed the previous projects, of which Jerry was familiar with. Michael provided an overview of the project to date. The main concern shared by Jerry include: • CRNA, works closely with Ahtna Inc., and continued coordination and communication efforts should be directed to Ahtna. • Concern about development and how to be prepared, Jerry mentioned the social impacts of the Alaska Highway Construction and how Tanacross, his home town is still dealing with the social bi-products. • Encouraged the producers to look at other means in lieu of taxation to help the communities not part of an organized Borough. He mentioned finding ways to support education, schools and transportation. There may be an opportunity to look at land leases with Ahtna and he is concerned about the impacts to Cantwell. • Expressed also was the State's approach to working with tribes and the long history of not recognizing Tribal Governments. Overall this was a very good meeting to start the conversation and to build the relationship. |  |  |

| 1    | Discussion     | Josselyn O'Connor gave an overview of the Project to Monica Adams, CEO of PCHS. Monica knew very little about the project and was excited to learn about the activities. She seemed very supportive of the project. Her main issues/questions regarded the cost of health care. Will the jobs and economy drive up the cost of health care? Item to note: PCHS runs the largest psychiatric facility in the area. |  |  |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |
| 1    | Stakeholder Action Item | Provide AGDC contact to Victor Joseph at TCC. Suggested AGDC representative is Miles Baker.                                                                                                                                                                                                                                                                                                 |  |  |  |
| 2    | Stakeholder Action Item | Provide name of 3rd party contractor to Victor Joseph.                                                                                                                                                                                                                                                                                                                                      |  |  |  |
| 3    | Stakeholder Action Item | Provide FERC contact and public scoping schedule to TCC.                                                                                                                                                                                                                                                                                                                                    |  |  |  |
| 4    | Stakeholder Action Item | Next meeting with TCC bring map books to show area.                                                                                                                                                                                                                                                                                                                                         |  |  |  |
| 5    | Stakeholder Action Item | Determine if TCC was contacted for the labor study. If not, get the contractor the contact information for Don Shircel.                                                                                                                                                                                                                                                                     |  |  |  |
| 6    | Stakeholder Action Item | TCC Annual Meeting is March 2016; keep it in mind for future outreach.                                                                                                                                                                                                                                                                                                                      |  |  |  |
| 7    | Stakeholder Issue       | Is there a potential for propane to be in the gas? Will there be a formation of a separate company, similar to Alyeska?                                                                                                                                                                                                                                                                     |  |  |  |
| 8    | Stakeholder Issue       | How realistic is the project?                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| 9    | Stakeholder Issue       | Is there potential to have an off-take at the Yukon River bridge? How will gas get to Fairbanks?                                                                                                                                                                                                                                                                                            |  |  |  |
| 10   | Stakeholder Issue       | A brief discussion of the labor and logistics studies and whether or not TCC had been contacted.                                                                                                                                                                                                                                                                                            |  |  |  |
| 11   | Stakeholder Issue       | How will unorganized boroughs/communities be dealt with by the project?                                                                                                                                                                                                                                                                                                                     |  |  |  |
| 12   | Stakeholder Issue       | How will the project work with tribal organizations to address the long term impacts in communities (e.g. health and social impacts)? A relationship is needed to look at the issues of health and social impacts, and assisting the communities to prepare for the project.                                                                                                                |  |  |  |
| 13   | Stakeholder Issue       | When will the FERC scoping meetings happen?                                                                                                                                                                                                                                                                                                                                                 |  |  |  |
| 14   | Stakeholder Issue       | How will tribes be able to reduce their energy costs?                                                                                                                                                                                                                                                                                                                                       |  |  |  |
| 15   | Stakeholder Issue       | TCC has an employment and training department, as well as relationships with the various vocational-technical institutions throughout Alaska. Specific institutions include the Pipeline Training Center and AVTEC. TCC shares information with Doyon Limited. There are many opportunities for shareholders and tribal members for trainings and resources to develop individual capacity. |  |  |  |
| 16   | Stakeholder Issue       | The guarantees provided in TAPs with percentage of hire and encroachment have not been easily addressed. TCC currently has skilled labor in security.                                                                                                                                                                                                                                       |  |  |  |
| 17   | Stakeholder Issue       | Will there be induced access from the project, and will this issue will be addressed in the EIS?<br>Induced access will reduce resources. Of specific concern is area 20A near Alatna, Allakaket,<br>Evansville, Rampart, Minto, and Nenana.                                                                                                                                                |  |  |  |

| 1    | Energy Day at the Alaska State<br>Fair | Representatives of the Alaska LNG Project set up a booth at the Alaska State Fair in Palmer Alaska<br>on August 27, 2015, Energy Day, to engage fairgoers about the Project and to talk about Alaska<br>energy resources in general. Energy Day focuses on the Alaska energy industry and many of the<br>companies involved set up booths to talk about their companies and projects. Alaska LNG was<br>represented by Lisa Gray and stakeholder engagement support contractors Rosetta Alcantra and<br>Patty Murphy (E3); Tasha Edwards (Umiaq); and Angel Rabon and Elizabeth Appleby (AECOM). |  |

| 1    | Summary        | Presented Project Overview to group of approximately 75 people. Audience was generally supportive of the Project and included individuals from oil and gas companies, support/service companies, and consulting/contractors. Audience questions ranged from technical questions about the Project design and scope to commercial questions related to gas marketing and timing of commercial negotiations. |  |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                       |  |  |
| 1    | Stakeholder Action Item | Bring information on design and logistics to avoid impacts to caribou, including construction timing, when it is fully available. To be done in Q1 2016.                                                                                                          |  |  |
| 2    | Stakeholder Issue       | Is the project the same gas pipeline north of the Umiat area? Is this project the same as the Alpine gasline at Kuukpik? Is this project involved with Kuukpik?                                                                                                   |  |  |
| 3    | Stakeholder Issue       | What is the routing of the pipeline? Will the project be built along TAPS?                                                                                                                                                                                        |  |  |
| 4    | Stakeholder Issue       | Is the pipeline located 50 miles from Anaktuvuk Pass?                                                                                                                                                                                                             |  |  |
| 5    | Stakeholder Issue       | When does the construction start?                                                                                                                                                                                                                                 |  |  |
| 6    | Stakeholder Issue       | Do you have a donation fund to help Inuit Corporation pay for regular fuel and diesel? I hope Anaktuvuk Pass will benefit from this project in the future.                                                                                                        |  |  |
| 7    | Stakeholder Issue       | Is the project close enough to Anaktuvuk Pass for a heating system? I think the gasline will benefit the Fairbanks, Anchorage, and Fort Greely areas because the pipeline already goes through there. I do not think the project can bring gas to Anaktuvuk Pass. |  |  |
| 8    | Stakeholder Issue       | Is Alaska LNG coming to Anaktuvuk Pass more often?                                                                                                                                                                                                                |  |  |
| 9    | Stakeholder Issue       | The elections are coming up; can our delegates come and hear our concerns?                                                                                                                                                                                        |  |  |
| 10   | Stakeholder Issue       | AFN (Alaska Federation of Natives) is coming up; will Alaska LNG be there?                                                                                                                                                                                        |  |  |
| 11   | Stakeholder Issue       | I hope the village gets a policy on getting local people hired.                                                                                                                                                                                                   |  |  |
| 12   | Stakeholder Issue       | Does the project have an EIS?                                                                                                                                                                                                                                     |  |  |
| 13   | Stakeholder Issue       | There is concern about the impact to caribou used as a subsistence resource by Anaktuvuk Pass.                                                                                                                                                                    |  |  |
| 14   | Stakeholder Issue       | Take a look at Nuiqsut; about 50 people in the community require nebulizers. If the flaring goes on in our region, nebulizers will be required for every household in Anaktuvuk Pass. Will there be any flares in the Anaktuvuk Pass area?                        |  |  |
| 15   | Stakeholder Issue       | If Anaktuvuk Pass gets any of that natural gas, we could probably ask for a piece of energy fund. Will that include home heating repair and maintenance?                                                                                                          |  |  |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                            |  |
| 1    | Discussion        | Goal was to introduce Ross Sorenson as Alaska LNG project contracting lead and give an informal update on the project. Idea was tossed around to begin LNG education and economics. Jobs and contracting opportunities were the focus. |  |
| 2    | Stakeholder Issue | The idea of starting to do outreach about LNG education and economics was discussed.                                                                                                                                                   |  |
| 3    | Stakeholder Issue | Jobs and contracting opportunities was a main focus of the meeting.                                                                                                                                                                    |  |

| ltem | Item Agenda Item(s) Description                                                                 |  |  |  |
| 1    | 1 Stakeholder Action Item Give James Kori contact information to Ned Gaines.                    |  |  |  |
| 2    | 2 Stakeholder Action Item Consider scheduling a meeting in Homer at some point for the project. |  |  |  |

| 3  | Stakeholder Issue | What are the drivers for going to a 48 inch pipeline? How many compressor stations would there be?                                                                                                                                                                                                               |
|----|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4  | Stakeholder Issue | What is the carrier capacity of the ships?                                                                                                                                                                                                                                                                       |
| 5  | Stakeholder Issue | Would the Yukon crossing be used as a logistics staging area?                                                                                                                                                                                                                                                    |
| 6  | Stakeholder Issue | Attendee commented that they did not know previously that the pipeline cost is only 25 percent of the total cost. Does the project have extra gas to sell?                                                                                                                                                       |
| 7  | Stakeholder Issue | Did the governor help or hurt the project when he went to Japan looking for customers? Among the partners, who has the most interest in the project?                                                                                                                                                             |
| 8  | Stakeholder Issue | What is the timing for FEED decision?                                                                                                                                                                                                                                                                            |
| 9  | Stakeholder Issue | When will construction start?                                                                                                                                                                                                                                                                                    |
| 10 | Stakeholder Issue | Have you acquired land in Nikiski?                                                                                                                                                                                                                                                                               |
| 11 | Stakeholder Issue | Native allotments were noted in the Yukon River Bridge crossing area.                                                                                                                                                                                                                                            |
| 12 | Stakeholder Issue | Can the project deliver propane to small communities? If a gasline comes into Fairbanks, will it lower the cost of gas? Can off-takes also take in gas from other sources? There are other gas fields besides Point Thomson. Would commercial businesses and military bases convert to natural gas?              |
| 13 | Stakeholder Issue | Request for additional ethno-geographical studies, through FERC or private grants.                                                                                                                                                                                                                               |
| 14 | Stakeholder Issue | There is an information gap between the state and general public regarding where the off- take locations would be located. The state is not communicating the economy of scale which will prevent small towns from getting gas off-takes.                                                                        |
| 15 | Stakeholder Issue | The Mayor of Homer, Beth Wythe, requested a project meeting in Homer. Although they are not directly impacted by the project, Homer wants to be prepared and have local workers on the project.                                                                                                                  |
| 16 | Stakeholder Issue | When is the Fairbanks FERC Meeting? Will FERC have meetings around the state? The federal government should facilitate the project and increase U.S. exports.                                                                                                                                                    |
| 17 | Stakeholder Issue | The governor and legislators do not need to talk about the reserve tax at this phase of the project.<br>They should be discussing whether or not the state will buy out TransCanada instead. The special<br>session should resolve the TransCanada issue. What does Alaska LNG need from the special<br>session? |
| 18 | Stakeholder Issue | What would be the total number of construction and operation jobs? Please clarify projections of indirect jobs during operations.                                                                                                                                                                                |
| 19 | Stakeholder Issue | How long does it take the environment to recover after the grass and plants are impacted?                                                                                                                                                                                                                        |
| 20 | Stakeholder Issue | The project should plan for the bust that will come after completion of construction.                                                                                                                                                                                                                            |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 1    | Discussion        | Josselyn O'Connor explained Larry Persily's role with the KP Borough and encouraged attendees to keep the lines of communication open with him. Linda Swarner - KP Food Bank Ricky Gease - Kenai River Sportfishing Association LeeShore Center Discussion on socioeconomic impacts and the potential for increased demands on the services these NGO's provide (food & shelter). We discussed the options of a closed vs. open work camp. All agreed they would prefer to see an OPEN camp stating the importance of the community reaping the economic benefits. They expressed the economic benefits outweighed the negative their organizations might see. They all seemed excited about the prospect of new community members able to volunteer and financially support their causes. |  |  |
| 2    | Stakeholder Issue | The participants from nonprofit groups all seemed excited about the prospect of new community members able to volunteer and financially support their causes. All agreed they would prefer to see an open work camp, stating the importance of the community reaping economic benefits. Participants thought the economic benefits outweighed the negative impacts their nonprofit organizations might see.                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 3    | Stakeholder Issue | Discussion on potential project impacts to socioeconomics and the potential for increased demands on the services these non-governmental organizations (NGO's) provide, such as food and shelter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |

| 1    | Discussion        | Josselyn O'Connor presented the following: Oct 19 - Kenai Spur Highway Open House - HDR presenting the event, highlight feasibility process, looking for feedback/input from the community on key issues, maps with options will be shown. A question was asked about whether information would be available to those that can not attend the Open House. Josselyn informed the group she was working on that issue. Oct 27 - FERC scoping meeting in Nikiski - Josselyn will provide times to NCC secretary for distribution when dates are available. G&G work - Onshore work wrapping up. Off-shore work will continue till approximately mid-November weather permitting. Appreciation to the community for their support and safety surrounding the work this summer. Fred Miller distributed ~30 maps of the LNG facility footprint overlaid on a KPB area map (attached). There was great interest in the map from the group. Fred stated that he had heard lots of rumors and that this map confirmed they are just that, rumors. Josselyn O'Connor took the opportunity to explain that the footprint map was presented to Agencies for input, was a preliminary design idea, would most likely change based on data collected during G&G studies, and that this is NO way was a final document. No questions received. Maps: Fred Braun (area real estate professional) informed the group that KP Borough's GIS system is a great resource. At anytime you can search for Alaska LNG properties and all recorded properties will be highlighted. Josselyn O'Connor said that Bobiu Lay in the KP GIS department is a great resource and can provide maps as well. Coffee with Alaska LNG: Josselyn expressed the Project's desire to continue these gatherings. We will start back up in November. Feedback regarding venue and times will be considered moving forward. The Project understands that the community is very interested in land and Josselyn Stated she would try and get a member of the Lands team to join us at the next coffee gathering. Fred Miller expressed his thoughts on the man who was |  |  |
| 2    | Stakeholder Issue | Attendee stated Nikiski should get ready for the environmental push-back on the Alaska LNG Project. When asked to explain, he referenced environmental groups stopping the Keystone Pipeline and that he did not want to see that happen here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 3    | Stakeholder Issue | After discussing the Nikiski Ground Water Study being conducted by the Kenai Peninsula Borough (KPB), an attendee suggested the Nikiski Community Council send a letter to KPB Mayor Navarre and Cc Alaska LNG expressing the Council's desire to partner and seek creative study opportunities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

| 1 | Stakeholder Action Item | Bring more detailed information to answer wetlands question next time the project is in Kaktovik – how many wetlands be impacted and what kind of mitigation would be done.                                                                                                                                                          |
|---|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 | Stakeholder Issue       | How tall would the pipeline be above ground?                                                                                                                                                                                                                                                                                         |
| 3 | Stakeholder Issue       | Attendees discussed the disturbance of burial sites by another project, which failed to notify the community they were working in the area to the east of Kaktovik. Discussion of the State of Alaska community-wide subsistence survey, and residents wanted to know what happens to information they give for subsistence surveys. |
| 4 | Stakeholder Issue       | One of the community leaders suggested that the project should have the legislative leaders come in for the FERC meeting in Kaktovik. The community feels overlooked by the State of Alaska.                                                                                                                                         |
| 5 | Stakeholder Issue       | Why are all the Kaktovik meetings in October?                                                                                                                                                                                                                                                                                        |
| 6 | Stakeholder Issue       | Will Livengood and Fairbanks benefit from the pipeline?                                                                                                                                                                                                                                                                              |
| 7 | Stakeholder Issue       | How many wetlands would the project impact? What kind of mitigation would the project offer?                                                                                                                                                                                                                                         |
| 8 | Stakeholder Issue       | Kaktovik wants an above ground pipeline which is tall enough for caribou to pass underneath. The community wants to avoid a pipeline made of shiny metal because shiny metal spooks caribou.                                                                                                                                         |
| 9 | Stakeholder Issue       | Agencies are reducing the number of caribou Kaktovik residents may shoot. Community concerns noted for caribou herds used for subsistence.                                                                                                                                                                                           |

 MEETING DETAILS

 Meeting Type
 Meeting/Workshop
 Date of Meeting
 October 7, 2015

 Sub-Project Name
 LNG Plant, Marine Terminal, Kenai Spur Highway reroute
 Location
 Kenai, AK

 Meeting Subject
 Presentation by Caring for the Kenai, Nikiski and Kenai Student of the Month
 Student of the Month
 Student of the Month

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                              |  |  |
| 1    | Stakeholder Issue       | Who has ownership of the gas? Is this project the same as the Alaska Stand Alone Pipeline (ASAP) Project? How are they different?                                                                                                                                                                        |  |  |
| 2    | Stakeholder Issue       | One attendee commented that the studies being conducted for the Alaska LNG Project had already been done for other projects. It was noted by Alaska LNG staff that they are working with Alaska Gasline Development Corporation (AGDC) to avoid duplication of studies.                                  |  |  |
| 3    | Stakeholder Issue       | The Alaska LNG team members were told by one of the interpreters that they had not heard any details about the FERC meeting on the radio. No flyers or notifications of the pending FERC meeting were observed on the public poster/flyer boards at the grocery store or at the Inupiat Heritage Center. |  |  |
| 4    | Stakeholder Issue       | What is FERC?                                                                                                                                                                                                                                                                                            |  |  |
| 5    | Stakeholder Issue       | What are the labor opportunities for the communities?                                                                                                                                                                                                                                                    |  |  |
| 6    | Stakeholder Issue       | One attendee commented on the high level of safety that previous oil and gas operations required.                                                                                                                                                                                                        |  |  |
| 7    | Stakeholder Action Item | Adjust future discussions to indicate that the CPAI LNG and Alaska LNG cooling processes are different. Q1 2016.                                                                                                                                                                                         |  |  |

|------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ltem | Agenda Item(s)                              | Description                                                                                                                                                                                           |  |  |
| 1    | Stakeholder Issue - FERC<br>Scoping Comment | Will all of communities along the pipeline be able to access the natural gas? I want Kaktovik to have an off-take for natural gas.                                                                    |  |  |
| 2    | Stakeholder Issue - FERC<br>Scoping Comment | So far, how many meetings have been held in Kaktovik about the project?                                                                                                                               |  |  |
| 3    | Stakeholder Issue - FERC<br>Scoping Comment | Did the Federal Energy Regulatory Commission (FERC) contact the Native Village of Kaktovik about this meeting? Did FERC contact the Kaktovik Inupiat Corporation to let them know about this meeting? |  |  |
| 4    | Stakeholder Issue - FERC<br>Scoping Comment | Kaktovik has a problem with erosion. The permafrost is melting fairly quickly.                                                                                                                        |  |  |
| 5    | Stakeholder Issue - FERC<br>Scoping Comment | Are you considering earthquake issues in the Environmental Impact Statement (EIS)?                                                                                                                    |  |  |
| 6    | Stakeholder Issue - FERC<br>Scoping Comment | There is a concern about the migratory patterns of caribou and how they have changed. I want to make sure this is included in the EIS.                                                                |  |  |

| 10 | Stakeholder Issue                           | One attendee noted not wanting to sell property to the project. Concern raised for the project right of ways encouraging use by snowmachines and off-highway vehicles, and increasing potential for trespass over adjacent private property. Concerned corridor users would leave trash along the right of way. Question about access to fishing setnet sites and beach access. If the project purchases our land, what does that do to the fishing rights? An attendee brought up concerns for his fishing lease area, and noted Chevron had severe impacts in the past on his fishing.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 11 | Stakeholder Issue                           | We want more question and answer time at public meetings. We want an Alaska LNG representative to address the entire audience instead of answering questions one-on-one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 12 | Stakeholder Issue                           | Discussion regarding erosion on the bluffs and what has been done in the past to mitigate erosion.<br>Concerns raised by attendees about local water table with water use by the LNG facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 13 | Stakeholder Issue                           | How can the project ensure the fish can still run?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 14 | Stakeholder Issue                           | The construction and work camps are going to increase crime in Nikiski.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 15 | Stakeholder Issue                           | Concern for adverse impacts to the community from increased traffic on the roads in the Kenai Peninsula.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 16 | Stakeholder Issue                           | Concerns raised by attendees over potential contamination of ground water from the LNG facility.<br>One question asking if Alaska LNG is pouring antifreeze down wells on land purchased for the<br>project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 17 | Stakeholder Issue - FERC<br>Scoping Comment | Would there be a right-of-way constructed where the pipeline comes ashore in Nikiski? Would there be above ground structures where the pipeline leaves Beluga and where it comes ashore in Nikiski? What would be the footprint of the proposed Beluga and Boulder Point facilities? Would there be "pig" launching and receiving stations or facilities on both sides of Cook Inlet? Would there be cathodic protection for the sub-inlet pipeline located at the facility where the pipeline comes ashore? Would there going to be compressor stations where the pipeline leaves Beluga and comes ashore in Nikiski? How would the project test the sub-inlet pipeline pressure? Would the pipeline be buried under Cook Inlet? If so, at what depth with it be laid on the sea floor? Would the best available controlled technology be utilized for gas-fired turbine exhaust boilers and other fuel burning devices? What are the plans for the dismantlement, removal and restoration of the LNG facilities and the pipeline? |
| 18 | Stakeholder Issue - FERC<br>Scoping Comment | How safe would the LNG plant be? How would the project impact the set net sites near the docking facility? Would the portion of the pipeline from Boulder Point to the LNG facility be above or below ground? Would the shore house/building contain gas detecting and alarm equipment? Would the LNG plant run off of electric utility power? Would there be gas pressure relief devices at the shore facility? How would the project test the pipeline pressure at the LNG facility? Cook Inlet has very high volatile tide fluctuations. Would the Agrium plant be moved or re-opened? There is a concern about the amount of water the LNG plant intends to use.                                                                                                                                                                                                                                                                                                                                                                |
| 19 | Stakeholder Issue - FERC<br>Scoping Comment | Would the proposed plant move the highway? When would the highway be relocated? There is a concern about not getting information to the affected commercial fishermen about possible road relocation. The new road by-pass needs to be a five lane road for safety reasons. The road relocation should go from mile 17 to mile 24.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 20 | Stakeholder Issue - FERC<br>Scoping Comment | There are many rumors that the project has run out of money for land purchases, which gives off the impression that the citizens should be grateful for what the project offers. This is not right and a concern of the community.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 21 | Stakeholder Issue - FERC<br>Scoping Comment | The project should not be able to pursue any more progress until it has a definite plan for purchasing homes from impacted people. How would this project be impacted if there was a financial crisis or money was demonetized?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 22 | Stakeholder Issue - FERC<br>Scoping Comment | What are the routes for the access roads? Would the access roads be open to the public? Would the access roads become borough roads? Would the access roads be paved and maintained?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 23 | Stakeholder Issue - FERC<br>Scoping Comment | Would the pipeline route go around or through Denali National Park?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 24 | Stakeholder Issue - FERC<br>Scoping Comment | What is the end of useful life of the project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 25 | Stakeholder Issue - FERC<br>Scoping Comment | What are the plans for helping out locals impacted by the LNG facility? The route keeps changing, which means we are unable to plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 26 | Stakeholder Issue - FERC<br>Scoping Comment | Would the area facility or pad where the pipeline comes ashore be fenced? Eminent domain should not be used. What would the project do with the purchased property? The project should consider buying out the homes of people in the Miller Loop area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 27 | Stakeholder Issue - FERC<br>Scoping Comment | Would Nikiski have a gas off-take?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 28 | Stakeholder Issue - FERC<br>Scoping Comment | The coffee meeting dialogues have created an inconsistency in answers to questions. The project needs to be more forthcoming with answers to community concerns. The fishermen north of Nikiski have not been contacted about how they would be impacted.                                                                                                                                                                                                                                                                                                                                            |
| 29 | Stakeholder Issue - FERC<br>Scoping Comment | How would the Department of Homeland and Coast Guard mitigate the buffer requirements for the fishermen? Would there be another opportunity to come before the FERC committee?                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 30 | Stakeholder Issue - FERC<br>Scoping Comment | Has the project identified gravel sources for the project? The project should publish how much they paid for properties. The project lacks transparency.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 31 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for changes in the quality of life from the LNG facility. Trenchless methodology has been very useful in the areas of crossing critical areas of paleontology, wetlands, shore or beach approaches, raptor nesting areas, noise reductions, and historical sites and waterways, and should be considered. Families have spread ashes off the bluff, it is sacred ground.                                                                                                                                                                                                                     |
| 32 | Stakeholder Issue - FERC<br>Scoping Comment | There is a concern about the clear-cutting of forests near the LNG facility. What precautions would the project take to keep from carrying invasive weeds from site to site?                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 33 | Stakeholder Issue - FERC<br>Scoping Comment | What are the potential impacts from a catastrophic event at the LNG facility? How likely is an explosion? Can the project provide a list of the hazardous gases and fluids that could be spilled or vented into the atmosphere? There should be a berm in place to protect the community in case of an explosion. How would the shockwave in an explosion impact the area around the LNG facility?                                                                                                                                                                                                   |
| 34 | Stakeholder Issue - FERC<br>Scoping Comment | Would construction or operation impact the water wells? How would this project impact our water table? How would the project prevent sea water from the Cook Inlet pipeline from migrating up along the pipeline into the shore facility location and/or fresh drinking water aquifers? How would the project monitor the ground water wells during construction and operation? Can the project provide detailed maps that show the wetlands and classification types of wetlands in the pipeline route on the Kenai Peninsula? What protections are going to be made for the air and water impacts? |
| 35 | Stakeholder Issue - FERC<br>Scoping Comment | How would the project affect marine life in Cook Inlet? What would happen to the fish in the lake near our home? How would the acoustics effects of the pipeline under Cook Inlet impact marine mammals and fish? How would the moose, osprey, and eagles be impacted by this project? How would the fishing near Salamander Beach be impacted?                                                                                                                                                                                                                                                      |
| 36 | Stakeholder Issue - FERC<br>Scoping Comment | How would the project house and feed the new people that are here for work? How would this project impact the value of my home?                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 37 | Stakeholder Issue - FERC<br>Scoping Comment | How would the influx of people impact the crime rate? How would the project help with the new burden on hospitals, fire departments, schools etc.? There is a concern that the crime rate would rise with the influx of work camps. How would the project work to prevent crime?                                                                                                                                                                                                                                                                                                                     |
| 38 | Stakeholder Issue - FERC<br>Scoping Comment | Would the project have an impact on commercial and subsistence fishing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 39 | Stakeholder Issue - FERC<br>Scoping Comment | Would the LNG plant have a negative impact on air quality? Would the LNG plant emit any smell? Are there any emissions of methane or any other gas near the onshore facility when the pipeline is operational? Would the emissions from the project be monitored by the EPA or the ADEC?                                                                                                                                                                                                                                                                                                             |
| 40 | Stakeholder Issue - FERC<br>Scoping Comment | Would the LNG facility require high speed telephone and data conductors and if so, would those services be made available for the public in the Boulder Point area?                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 41 | Stakeholder Issue - FERC<br>Scoping Comment | How would the project handle all of the traffic during construction? How would the project impact traffic? How many vehicles per day would be traveling to where the pipeline comes to shore? What types of vehicles would be traveling to where the pipeline comes to shore? How would the trucks from the project impact traffic on the Kenai Spur Highway?                                                                                                                                                                                                                                        |
| 42 | Stakeholder Issue - FERC<br>Scoping Comment | How would the project impact vessel traffic in Cook Inlet? How busy would Cook Inlet be from the tankers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 43 | Stakeholder Issue - FERC<br>Scoping Comment | How would the project impact the septic systems in the area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 44 | Stakeholder Issue - FERC<br>Scoping Comment | Would the LNG plant contaminate the soil? Would the project test the water wells to obtain a baseline for salinity and/or contamination?                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 45 | Stakeholder Issue - FERC<br>Scoping Comment | How would dredging in Cook Inlet affect the fisheries?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 46 | Stakeholder Issue - FERC<br>Scoping Comment | How likely is a fire?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 47 | Stakeholder Issue - FERC<br>Scoping Comment | Would the project impact recreational opportunities in the Nikiski area? The recreational use of the beaches should be brought into consideration.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Alaska LNG. | MINUTES OF MEETING (MOM) | DCN tbd<br>02-Nov-16<br>REVISION: FINAL |
|-------------|--------------------------|-----------------------------------------|
|             | CONFIDENTIAL             | Page 4 of 4                             |

| 48 |  | How much noise would be present? The noise from the LNG facility is a concern. Would I be able to see the LNG plant or the marine terminal from my home? |

| 1    | Stakeholder Action Item | Add Fred and Dawn Deiser to the project contact list.                                                                                                                                                                                                                                                                                                                                     |  |  |
| 2    | Stakeholder Action Item | Check to see if Alaska Instrument Company is signed up as a vendor.                                                                                                                                                                                                                                                                                                                       |  |  |
| 3    | Stakeholder Issue       | Can you farm on top of the land over the pipeline? How deep is the pipeline buried? Comment that flow meters are not made to work with 48-inch pipes.                                                                                                                                                                                                                                     |  |  |
| 4    | Stakeholder Issue       | One conversation revolved around whether or not the lower cost of gasoline would impact the affordability of this project.                                                                                                                                                                                                                                                                |  |  |
| 5    | Stakeholder Issue       | Residents said they have a cabin between Pipeline Mileposts 717 and 718 near Fish Creek.<br>Attendees stated they would prefer the eastern route and want the pipeline project to end at Port<br>MacKenzie. Attendees were interested in the map books and the pipeline route as it related to their<br>property and the surrounding area.                                                |  |  |
| 6    | Stakeholder Issue       | Attendees brought up concerns for their fishing lease area in Nikiski, and noted Chevron had severe impacts in the past on their fishing. The couple lives in Willow and fishes in Nikiski, and attended the Nikiski and Houston FERC meetings to discuss their concerns. It does not make sense to open up an area with access roads and then reclaim the land and close off the access. |  |  |
| 7    | Stakeholder Issue       | Where will the off-takes be located?                                                                                                                                                                                                                                                                                                                                                      |  |  |

| 8  | Stakeholder Issue                           | Who decides the location of the off-takes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |

| 9  | Stakeholder Issue                           | Discussion on whether or not the project will need State of Alaska permits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 10 | Stakeholder Issue                           | We need land developed and your access roads should stay for residents to use.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 11 | Stakeholder Issue                           | Owner of Alaska Instrument Company discussed how to register his business on the website.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 12 | Stakeholder Issue - FERC<br>Scoping Comment | The east alternative route could save the state money.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 13 | Stakeholder Issue - FERC<br>Scoping Comment | The Mat-Su Borough Port Commission supports the Alaska LNG Project going to Nikiski. However, we advocate for the alternative route which would come down the west side of the Susitna River to just below the Deshka Landing, cross to the east side of the Susitna River and angle down to Point MacKenzie (not Port MacKenzie) about four to five miles south and west of the Port, and then cross the Point Possession and follow an existing pipeline from Point Possession down to Nikiski. Mat-Su Borough Port Commission supports this route because it would eliminate the need to cross over ten salmon streams on the west side, it would avoid Alaska Native Corporation lands in Tyonek, it would allow companies proposing to build LNG facilities at Port MacKenzie to handle the state's 25 percent share of the gas, and the studies would be in place if this project falls through and the backup project of ASAP is built instead. |  |
| 14 | Stakeholder Issue - FERC<br>Scoping Comment | How would the gasline benefit Alaskans if it is just going to Nikiski and being used for export? The route bypasses Fairbanks, Port MacKenzie, and Anchorage. We need to be able to provide gas to Alaskans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |
| 1    | Stakeholder Action Item | The Alaska LNG team learned that the Kuukpik Board Meeting was occurring at the same time and should be noted for future meetings to avoid conflict.                                                                                                                                                                                                                                                                                                                     |  |  |  |
| 2    | Stakeholder Issue       | Will the pipeline expand further west after the main route is constructed or just stay east in Deadhorse?                                                                                                                                                                                                                                                                                                                                                                |  |  |  |
| 3    | Stakeholder Issue       | The community wants reassurance that concerns will be taken to the appropriate agencies, especially regarding caribou migration.                                                                                                                                                                                                                                                                                                                                         |  |  |  |
| 4    | Stakeholder Issue       | Concern that no one from the North Slope Borough attended the meeting to hear concerns.                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |
| 5    | Stakeholder Issue       | Was the Alyeska Pipeline built under FERC's guidance?                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |
| 6    | Stakeholder Issue       | Concern about the cost of living in Anaktuvuk Pass (specifically heating and food). Discrimination noted during the construction of TAPS in Anaktuvuk Pass. The Alaska LNG Project needs to benefit local communities.                                                                                                                                                                                                                                                   |  |  |  |
| 7    | Stakeholder Issue       | There are hopes that that Alaska LNG keeps its promise to provide jobs to local labor force in whatever capacity possible. The Alaska LNG Project must help the residents of Anaktuvuk Pass get jobs.                                                                                                                                                                                                                                                                    |  |  |  |
| 8    | Stakeholder Issue       | There is concern about the project impacting caribou migration similar to the Alyeska Pipeline.                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |
| 9    | Stakeholder Issue       | Alaska LNG should work with state regulators to change the regulations for bow and guided hunting that began as a result of the Dalton Highway construction. Currently the bow hunters can hunt in the spring when caribou are moving north from their wintering grounds to the coastal plain, but Nuiqsut would prefer that the timing be changed to the fall. Concern about roadside kills (specifically of caribou) along Dalton Highway and ice roads in the winter. |  |  |  |

|   |    |    | _ |   | - |    |

| 10 | Stakeholder Issue                           | Suggestion for Fairbanks to get access to gas because they are currently burning a lot of wood for heat and people are getting sick from bad air quality.                                                                                                         |
|----|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11 | Stakeholder Issue                           | Concern about health hazards. Concern about the increasing rate of suicide in Anaktuvuk Pass.                                                                                                                                                                     |
| 12 | Stakeholder Issue                           | Increasing industrial activity in the area is a concern to Nuiqsut and Anaktuvuk Pass because we can now see the bright lights from town. We used to have to travel 30 miles outside of the village to see the lights.                                            |
| 13 | Stakeholder Issue - FERC<br>Scoping Comment | What is the general gasline route? Would it head west from Prudhoe Bay? Where would the pipeline end?                                                                                                                                                             |
| 14 | Stakeholder Issue - FERC<br>Scoping Comment | Thank you for coming to Nuiqsut. Nuiqsut would like to give input on hunting regulations to the Alaska Department of Fish and Game.                                                                                                                               |
| 15 | Stakeholder Issue - FERC<br>Scoping Comment | Fairbanks should get an off-take because fuel is expensive and they have poor air quality.                                                                                                                                                                        |
| 16 | Stakeholder Issue - FERC<br>Scoping Comment | Suggestion to change permitting time and location near the proposed pipeline to alleviate competition between subsistence and sport hunters. Nuiqsut attendee would like increased regulation of bow hunters.                                                     |
| 17 | Stakeholder Issue - FERC<br>Scoping Comment | Attendee noted he would like to see FERC ensure the project brings some sort of needed resources to Nuiqsut and other outlying villages on the North Slope.                                                                                                       |
| 18 | Stakeholder Issue - FERC<br>Scoping Comment | Please help Nuiqsut and Anaktuvuk Pass find jobs with the projects.                                                                                                                                                                                               |
| 19 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for impacts to hunting and caribou migrations. Concern for competition with sport hunters, including those accessing areas from the Dalton Highway. Nuiqsut would like to harvest from the herds coming down from the foothills which go across Colville. |
| 20 | Stakeholder Issue - FERC<br>Scoping Comment | Attendees raised concern for project impacts to suicide rates.                                                                                                                                                                                                    |
| 21 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for accidents on the Dalton Highway with caribou. Concern that increased hunting pressure from public transportation corridors is affecting the migration patterns of caribou in the region (particularly on the Colville River).                         |
| 22 | Stakeholder Issue - FERC<br>Scoping Comment | Concerns raised for social impacts of the project (high cost of heat and food). Attendee raised concern for discrimination of Alaska Natives.                                                                                                                     |
| 23 | Stakeholder Issue - FERC<br>Scoping Comment | Nuiqsut can see bright lights near them from other projects already.                                                                                                                                                                                              |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |
| 1    | Stakeholder Issue | Does the project know of any compressor station locations in the Trapper Creek area up to 20 miles out? What is the width of the pipeline right of way? To what depth is the pipeline buried in the ground? What is the difference between the ASAP and Alaska LNG Projects?                                                                                                                                                                                                                                                                        |  |  |
| 2    | Stakeholder Issue | How is the sulfur dioxide processed at the GTP? What is done with the Sulphur when removed from the gas?                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 3    | Stakeholder Issue | What is the altitude of the Nikiski LNG facility (concern for tsunamis and volcanoes)?                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 4    | Stakeholder Issue | This map does not show the pipe lay down areas or work camp locations. People would be very relieved if the pipeline routing is moved away from biologically sensitive areas. Trapper Creek residents were interested in the map book and wanted to see where the pipeline and road would be built in relation to their property and recreational trails.                                                                                                                                                                                           |  |  |
| 5    | Stakeholder Issue | Landowners near Cantwell wanted to look at the maps because they heard there were some changes to the alignment.                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 6    | Stakeholder Issue | Why will the pipeline not cross the river on a narrower spot near Troublesome Creek? There is concern about the pipeline route crossing the Troublesome Creek area where people use the trail, which also has a bear population. On Highway Map 105: Mat-Su Borough (MSB) Access Road towards Alaska LNG Milepost 674.5 and future compressor stations, the community suggests using the MSB Access Road for future compressor stations rather than creating a new access road. A resident stated his concern about the route east of Milepost 650. |  |  |

| 7  | Stakeholder Issue                           | Would the pipeline affect subdivision access routes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
|----|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 8  | Stakeholder Issue                           | Are project members attending the State Parks Advisory Board meetings to gather their opinions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 9  | Stakeholder Issue                           | Commenter noted that there may be a gas pipeline being built from Cook Inlet to the proposed Donlin Gold Mine in the Kuskokwim area.                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 10 | Stakeholder Issue                           | The best map to see the area recreational trails is on the ADNR website, which shows the snowmachine trails. A member of the snowmachine club pointed out the trails on the map book around the Trapper Creek area and commented, as soon as we know what your plans are, we will comment and work with you. Generally, Trapper Creek wants to keep the off-highway vehicle/snowmachine trails open to be able to access their cabins. Would the pipeline affect moose hunting access routes? Concern for route near Troublesome Creek where people use the trail. |  |
| 11 | Stakeholder Issue - FERC<br>Scoping Comment | The money spent on this project should be spent on researching and developing alternative energy for Alaska.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 12 | Stakeholder Issue - FERC<br>Scoping Comment | Whenever possible, the project should route the pipeline on the east side of the Parks Highway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 13 | Stakeholder Issue - FERC<br>Scoping Comment | I encourage construction to be during the winter for the Troublesome Creek area due to the higher population of bears and people during the summer.                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 14 | Stakeholder Issue - FERC<br>Scoping Comment | I encourage the project to be sensitive to the route on the west side of the Parks Highway because of the need to access remote cabins, particularly in the Denali State Park vicinity and between Denali State Park and Trapper Creek.                                                                                                                                                                                                                                                                                                                            |  |
| 15 | Stakeholder Issue - FERC<br>Scoping Comment | In addition to the five proposed off-takes, the project should have an industrial off-take point at Nikiski before the gas is liquefied in order to make gas available for industrial users.                                                                                                                                                                                                                                                                                                                                                                       |  |
| 16 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for fish and fish habitat in the Mat-Su Borough. Worried about impacts to salmon-bearing streams and how they would be crossed without damaging fish habitat.                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 17 | Stakeholder Issue - FERC<br>Scoping Comment | The thickness of the pipeline next to Susitna Valley (Su-Valley) High School should be thicker than the rest of the pipeline for safety.                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 18 | Stakeholder Issue - FERC<br>Scoping Comment | There is a concern for impacts to the viewshed at Denali State Park. Shield views of clearing and the right-of-way from Curry Ridge and Kesugi Ridge.                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 19 | Stakeholder Issue - FERC<br>Scoping Comment | Respect and minimize impacts to Denali State Park trails and recreationists.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |

| 1    | Project Overview  | After an introduction by Bob Shavelson (who invited the Project representatives to speak), Josselyn O'Connor presented the Project Overview to the Rotary Club meeting attendees. She fielded questions after the presentation. Questions included: Will the Project advance given the low price of natural gas? How much will in-state natural gas cost for consumers? Where do/will Project team members live during FEED stage (the individual had property he would like to rent-out in the Kenai area)? |  |  |
| 2    | Project Overview  | After an introduction by Bob Shavelson (who invited the Project representatives to speak), Josselyn O'Connor presented the Project Overview to the Rotary Club meeting attendees. She fielded questions after the presentation. Questions included: Will the Project advance given the low price of natural gas? How much will in-state natural gas cost for consumers? Where do/will Project team members live during FEED stage (the individual had property he would like to rent-out in the Kenai area)? |  |  |
| 3    | Stakeholder Issue | Will the project move forward given the low price of natural gas?                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 4    | Stakeholder Issue | How much will in-state natural gas cost for consumers?                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| 5    | Stakeholder Issue | Where will project team members live during the front end engineering design (FEED) stage? The individual asking had property he would like to rent-out in the Kenai area.                                                                                                                                                                                                                                                                                                                                   |  |  |

| 1    | Meeting Notes and Discusstion | 28-30 in attendance ADF&G presented findings from Subsistence Survey in the Nikiski area. They stated Alaska LNG helped pay for the survey. Fred Braun - stated to the group that Alaska LNG has a job to do. The community needs to be respectful to the Project reps at future community meetings. KSH Meeting feedback - too many options shown, 5 lanes needed, think the Project already knows the route Larry Persily (KPB) - hosting two meetings in Nikiski to connect directly with the community. Larry also handed out two maps prepared by the Borough (1:KSH options, 1: LNG facility in detail) |  |  |
| 2    | Stakeholder Issue             | There were too many options shown for the Kenai Spur Highway Relocation. Attendee stated five lanes are needed. Attendee stated he thinks the project already knows the finalized route.                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 3    | Stakeholder Issue             | Participant stated to the group that Alaska LNG has a job to do and the community needs to be respectful to the project representatives at future community meetings.                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |

| 1            | Bi-weekly meeting with DOT&PF | TIA and Review of meeting with KPB. HDR will write an email explaining the issue related to functional class of KSH and LOS thresholds. HDR will prepare an in-progress review copy of the TIA, providing some context for the email. Alaska LNG project will review email and in-progress TIA, then transmit to DOT&PF. Alaska LNG project will review TIA growth projections with socioeconomics team for the FERC EIS; if FERC EIS growth projections are supported by more data/analysis, HDR will use those growth rates. |  |

| ltem | Agenda Item(s)               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 1    | UCIDA interests and concerns | The meeting was organized as a result of UCIDA questions/comments about Alaska LNG which were raised at the November 4, 2015 Cook Inlet Harbor Safety Committee meeting. Dave Martin and Roland Maw expressed a number of concerns of the UCIDA membership about the Alaska LNG Project, including the potential for a safety zone or regulated navigation area around LNGCs and the need to allow setnet and driftnet fishing activities in close proximity to the LNGCs and the marine facilities at Nikiski. Dave Martin explained that the area near the proposed marine terminal is a very important fishing area, and some years the fish run south from the Forelands and straight into the nets of waiting drift net fishermen. It was discussed that Kenai LNG has been operating in cooperation with the local fishing industry throughout the years and that Alaska LNG Project could do the same thing, particularly given that the fishing season is short compared to the year-round operations of the LNGCs. Dave Martin expressed that the UCIDA membership doesn't view laden LNGCs any differently than any other vessel on Cook Inlet. Claire Joseph explained that no decisions had been made yet (nor has the Project requested that any decisions be made by regulatory agencies such as the US Coast Guard). Dave Martin expressed that that does not sit well with them, but later in the conversation seemed to appreciate the Project's early stage and why the Project team members cannot make explained previous experience with MMS, when he was told that they would not take action on something, and then MMS turned around and took action shortly thereafter. Dave Martin and Roland Maw explained there must be a rapid and reliable way to have gear replaced if it is damaged by the LNGCs. They explained that the process of gear replacement with tugs and other vessel operators in Cook Inlet Works well. Josselyn explained the communication ongoing with the set netters, and the group discussed the importance of beach access, particularly for the area north of the Kenai R |  |  |

| 2 | Stakeholder Issue | Participants expressed a number of concerns of the United Cook Inlet Drift Association (UCIDA) membership about the Alaska LNG Project, including the potential for a safety zone or regulated navigation area around LNG carriers (LNGCs). They expressed the need to allow setnet and driftnet fishing activities in close proximity to the LNGCs and the marine facilities at Nikiski. The area near the proposed marine terminal is important for fishing, and some years the fish run south from the Forelands and straight into the nets of waiting driftnets. Kenai LNG has been operating in cooperation with the local fishing industry throughout the years and Alaska LNG could do the same thing, particularly given the short fishing season compared to the year-round operations of the LNGCs. |
|---|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3 | Stakeholder Issue | UCIDA discussed the importance of beach access, particularly for the area north of the Kenai River.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 4 | Stakeholder Issue | UCIDA stated communication and awareness are important and can be done through training, the use of the radios, Notices to Mariners, and schedules for vessel transits. It is important Alaska LNG works with other organizations, such as the Kenai Peninsula Fishermen's Association (KPFA) and the Cook Inlet Fisherman's Fund.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 5 | Stakeholder Issue | Although UCIDA is focused on one gear type (driftnet), the escapement goals for the health of the fishery are an industry focus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 6 | Stakeholder Issue | The UCIDA membership does not view laden LNGCs any differently than other vessels on Cook Inlet. There must be a rapid and reliable way to have gear replaced if it is damaged by the LNGCs. They explained that the process of gear replacement with tugs and other vessel operators in Cook Inlet works well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| ltem | Agenda Item(s)                              | Description                                                                                                                                                                                                                                                                                                 |  |
| 1    | Stakeholder Issue - FERC<br>Scoping Comment | The project should re-look at the area near the Koyukuk Bridge Highway route where it crosses the road because of the high landslide activities. There is potential for salification in that area. The project should be aware of the landslide areas if the pipeline will be on the east side of the road. |  |
| 2    | Stakeholder Issue - FERC<br>Scoping Comment | Construction should not take place during hunting season (avoid the fall time especially). Construction in areas of critical moose habitat should be in early winter when the snow is not as deep.                                                                                                          |  |
| 3    | Stakeholder Issue - FERC<br>Scoping Comment | There should be no gravel extraction in the community of Coldfoot. The existing gravel extraction sites near Wiseman should be utilized.                                                                                                                                                                    |  |
| 4    | Stakeholder Issue - FERC<br>Scoping Comment | There are some areas of environmental concern and deep snow areas in the valley at the head of the Dietrich River and south of the Cove. I am concerned for potential effects from construction equipment over deep snow.                                                                                   |  |

| 3    | Stakeholder Action Item        | Verify route in relation to land owned by Janet Powers. Q4 2015.                                                                                                                                                                               |  |
| 4    | Stakeholder Action Item        | Mr. Hinman said he has 40 acres around Milepost 515 of the pipeline that could be used for staging.<br>Send this information to Dave Sinclair, Luke Marodi, Jay Moylan, and Ross Sorenson.                                                     |  |
| 5    | Stakeholder Issue              | What does MLBV mean? Will the project add sand if needed? Questions regarding the operating and maximum pressure of the mainline. Is the pipeline buried through Atigun Pass? How deep would the pipeline be buried? What are heater stations? |  |
| 6    | Stakeholder Issue              | Would Cook Inlet need to be dredged? Would the ships be bigger than ones currently coming out of Nikiski?                                                                                                                                      |  |
| 7    | Stakeholder Issue              | Who funds the pipeline and will the federal government contribute any money?                                                                                                                                                                   |  |
| 8    | Stakeholder Issue              | A resident said he has 40 acres around Milepost 515 of the pipeline that can be used for staging.<br>Alaska LNG has his contact information.                                                                                                   |  |
| 9    | Stakeholder Issue              | Attendee wanted to see the laydown yard locations. How far apart are the access roads? We heard they would be every quarter mile.                                                                                                              |  |

| 10 | Stakeholder Issue                           | Where is the route in relation to Denali National Park? Feedback was mixed; many understood the benefits of a Denali National Park route but were concerned about how the alternate route through Denali National Park may impact their land near McKinley Village. Does the Parks Highway run through part of Denali National Park? Why does the project not follow the Denali National Park road? Discussions on construction in the Nenana canyon area where the pipeline runs right next to the road. One resident commented that the state was blasting to move the rock back away from the highway. Janet Powers discussed previous route maps that showed the pipeline going under Jim Creek and through her driveway. The map book now shows that the route is on the other side of the highway and not on her land; she said ASAP drilled on her land. Run the pipeline through Denali National Park; there is lots of room in there. What is the project doing around McKinley Village? Where would the access road be located? The railroad is in the middle of everything the project would do in the Denali National Park area. |

| 11 | Stakeholder Issue                           | How long would construction last? Attendees stated that they do not want construction during tourist season.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 12 | Stakeholder Issue                           | Why does the project not use the railroad right of way? How wide is the pipeline right of way, adjacent to the Park Highway right of way, when going through the Nenana canyon? Would the project need a 180 foot wide right of way at that location [Nenana Canyon]? Would the project right of way overlap or be adjacent to the Intertie?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 13 | Stakeholder Issue                           | Who decides on off-takes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 14 | Stakeholder Issue                           | Did Alaska LNG do the GeoTech data (borings) in the area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 15 | Stakeholder Issue                           | There was a discussion on local hire during the Healy FERC Q&A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 16 | Stakeholder Issue                           | ADOT&PF has gravel pits that could be used for this project. (In reference to the gravel pit at Milepost 522 of the pipeline.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 17 | Stakeholder Issue                           | What will happen if the pipe ruptures? Would the project regularly go along the entire route and inspect the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 18 | Stakeholder Issue                           | Does the project reclaim the land used for access roads?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 19 | Stakeholder Issue                           | How does the heater station noise compare to compressor station noise? How much noise do compressor stations make? Citizens are concerned about noise pollution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 20 | Stakeholder Issue                           | We [in the Healy area] are concerned with the impact on land used for local recreation. An owner of a local horse riding tour company stated that she believes the pipeline will harm her business because she gives trail rides in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 21 | Stakeholder Issue - FERC<br>Scoping Comment | Would the temporary access roads be reclaimed? What would happen to the project infrastructure upon closure?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 22 | Stakeholder Issue - FERC<br>Scoping Comment | How big would the LNG tankers be coming into the marine terminal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 23 | Stakeholder Issue - FERC<br>Scoping Comment | How far apart would the construction access roads be and where would they be located?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 24 | Stakeholder Issue - FERC<br>Scoping Comment | The tourism economy in the Denali Borough should be protected. Concern for tourism industry with proposed route through Nenana Canyon. Disruptions during construction should be assessed. How would the project impact tourism and businesses in Greater Denali area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 25 | Stakeholder Issue - FERC<br>Scoping Comment | Would there be public access to the pipeline corridor? Would there be access to construction roads?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 26 | Stakeholder Issue - FERC<br>Scoping Comment | Healy is interested in year-round jobs with the project, such as at pump stations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 27 | Stakeholder Issue - FERC<br>Scoping Comment | What mitigation is there for fish habitat potentially impacted by increased marine traffic in the Nikiski area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 28 | Stakeholder Issue - FERC<br>Scoping Comment | Our local government is limited in the Denali Borough, and our small communities have limited ability to take advantage of project impact data and potential changes to the economy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 29 | Stakeholder Issue - FERC<br>Scoping Comment | Please fully consider all the socioeconomic impacts the project could have on Healy, especially during the construction boom. Attendee brought concern for the project hindering future development in the Denali Borough with in-progress title exchange for state/borough selected lands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 30 | Stakeholder Issue - FERC<br>Scoping Comment | The corridor passes the boundary of Gates of the Arctic National Park and Denali National Park, which are designated as wilderness. The project should consider the impact it may have on the wilderness character, including viewshed changes and noise levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|             | CONFIDENTIAL             | Page 3 of 3                             |

| 31 | Stakeholder Issue - FERC<br>Scoping Comment | What is the carbon footprint for this project? I would like to see climate change impacts considered in the EIS. Is the project aware of the executive order and draft guidance for agencies to consider climate change and greenhouse gases? |
|----|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32 | Stakeholder Issue - FERC<br>Scoping Comment | Would there be dredging in Cook Inlet? If there is dredging, what kind of impacts could there be?                                                                                                                                             |
| 33 | Stakeholder Issue - FERC<br>Scoping Comment | Considers impacts to noise levels and viewsheds. Concern raised for noise from compressor stations.                                                                                                                                           |
| 34 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for potential impacts to recreational wilderness used by local residents. Concern for impacts to recreation from construction access roads.                                                                                           |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |
| 1    | Stakeholder Action Item | Confirm whether the project contacted Ty Duggar.                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| 2    | Stakeholder Issue       | Several attendees asked if the pipeline was above or below ground. Would there be a private road along the pipeline?                                                                                                                                                                                                                                                                                                                                           |  |  |  |
| 3    | Stakeholder Issue       | Is it a good or bad thing that the state is buying out TransCanada? I hope the project goes into construction; this would be good for everyone.                                                                                                                                                                                                                                                                                                                |  |  |  |
| 4    | Stakeholder Issue       | How does the project drill under a river?                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
| 5    | Stakeholder Issue       | An attendee received a letter last year saying an access road may go down his section line, but the current route does not appear to show the pipeline crossing near his homestead. A resident said that there is serious boggy ground in the route shown that had not frozen until one week ago. Does the route come into Nenana?                                                                                                                             |  |  |  |
| 6    | Stakeholder Issue       | How long would the construction take? Participants discussed what work could be done in the winter verses what could be done in the summer.                                                                                                                                                                                                                                                                                                                    |  |  |  |
| 7    | Stakeholder Issue       | One resident commented that agricultural parcels run all the way to Two Mile Lake, but the current routing appears to miss them.                                                                                                                                                                                                                                                                                                                               |  |  |  |
| 8    | Stakeholder Issue       | Will there be any off-takes in Nenana? Nenana has good road and rail access, but no manufacturing business. If we had inexpensive energy we could attract more industry work. We need the gasline to go to Nenana. To whom would the residents have to pay their gas bill?                                                                                                                                                                                     |  |  |  |
| 9    | Stakeholder Issue       | Who decides on off-takes?                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
| 10   | Stakeholder Issue       | There was a discussion of the old and new political problems in Nenana.                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |
| 11   | Stakeholder Issue       | Nenana is the perfect place to barge supplies. The project can haul supplies on the road or railroad and then barge up the river. We have major railroad siding areas. Expensive energy is holding back business growth in Nenana. Nenana is tied to Fairbanks, but we are our own community. This pipeline could do great things for the state and especially for the Interior. If we became a producer state with industry we could fix our budget problems. |  |  |  |
| 12   | Stakeholder Issue       | One resident stated he had a trapline in the area of the pipeline.                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |

|      | AGENDA ITEMS                                |                                                                                                                                                                             |  |  |
|------|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s)                              | Description                                                                                                                                                                 |  |  |
| 1    | Stakeholder Action Item                     | Send a large regional map to Tyonek.                                                                                                                                        |  |  |
| 2    | Stakeholder Issue                           | What would the project use to drill?                                                                                                                                        |  |  |
| 3    | Stakeholder Issue                           | When would the project dig into the ocean? Would it be at slack tide or high tide?                                                                                          |  |  |
| 4    | Stakeholder Issue                           | Has the project considered coming south of Viapan Lake? This route might be a better option.                                                                                |  |  |
| 5    | Stakeholder Issue                           | Attendees wanted to see a larger map showing Tyonek over the small layout maps for orientation of the project.                                                              |  |  |
| 6    | Stakeholder Issue                           | The Chuitna River is the area of our ancestors.                                                                                                                             |  |  |
| 7    | Stakeholder Issue                           | Would there be clear cutting of the forest?                                                                                                                                 |  |  |
| 8    | Stakeholder Issue                           | How would the project deal with underground leaks? How would the project handle a leak in the middle of the Cook Inlet?                                                     |  |  |
| 9    | Stakeholder Issue                           | If Tyonek lets the Alaska LNG Project proceed first, then can we can say "no" to the proposed Chuitna Coal Project? There are solid coal beds out in the Cook Inlet.        |  |  |
| 10   | Stakeholder Issue                           | Noise impacts to marine mammals are a concern.                                                                                                                              |  |  |
| 11   | Stakeholder Issue - FERC<br>Scoping Comment | Would the pipeline be above or below ground? Would the pipeline be underground or under the mud in Cook Inlet? How deep underground would the pipeline be under Cook Inlet? |  |  |
| 12   | Stakeholder Issue - FERC<br>Scoping Comment | How large would the LNG facility be?                                                                                                                                        |  |  |

| Ala | ska | LN | G. |
|-----|-----|----|----|
|     |     |    |    |

| 13 | Stakeholder Issue - FERC<br>Scoping Comment | Would the pipeline cross under Cook Inlet? Where would the pipeline enter Cook Inlet? Where does the pipeline go through Tyonek? How close would the pipeline be to residential areas in Tyonek? There is a concern that the project is only a mile away from the community's cultural capital. |
|----|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14 | Stakeholder Issue - FERC<br>Scoping Comment | When would the project begin construction?                                                                                                                                                                                                                                                      |
| 15 | Stakeholder Issue - FERC<br>Scoping Comment | Some of the land proposed for the project belongs to the Native Village of Tyonek.                                                                                                                                                                                                              |
| 16 | Stakeholder Issue - FERC<br>Scoping Comment | How many days do we have to comment on the project? When will the project have more final maps and information on which the community of Tyonek can comment? Will comments be considered after the Draft EIS?                                                                                   |
| 17 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for sediment drifting when a trench is dug. Concern for sand bar formation.                                                                                                                                                                                                             |
| 18 | Stakeholder Issue - FERC<br>Scoping Comment | Tyonek is located on a fault line. Has the project done any seismic studies?                                                                                                                                                                                                                    |
| 19 | Stakeholder Issue - FERC<br>Scoping Comment | Would the methane gas hurt the fish in Cook Inlet?                                                                                                                                                                                                                                              |
| 20 | Stakeholder Issue - FERC<br>Scoping Comment | There are a lot of marsh lands on the proposed route near Tyonek. Concern for wetlands drying up after digging in the area.                                                                                                                                                                     |
| 21 | Stakeholder Issue - FERC<br>Scoping Comment | How would the project impact waterfowl? How would the project impact fish, including salmon?<br>Beluga whales come to Tyonek in the spring, summer and fall. How would the project impact the<br>endangered Beluga whales?                                                                      |
| 22 | Stakeholder Issue - FERC<br>Scoping Comment | Would the project impact subsistence in Tyonek? We live off the land. How would the project impact traditional plants?                                                                                                                                                                          |
| 23 | Stakeholder Issue - FERC<br>Scoping Comment | There is a concern about the project trenching in Cook Inlet; anything dug up will be taken towards Beluga. Would the project require dredging?                                                                                                                                                 |

| ltem | Agenda Item(s)          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |
| 1    | Stakeholder Action Item | Put maps on the project website.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |
| 2    | Stakeholder Action Item | Look up contact history and project nexus to land owned by Mark Ebel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| 3    | Stakeholder Issue       | When will there be only one gasline project? There is proposed currently the state's ASAP and the Alaska LNG, which creates confusion. Discussion on Alaska LNG and ASAP and cooperative agreements between the two projects. Discussions on the size and cost of 42-inch and 48-inch pipe. What would be the pressure in the pipeline? Would the pipeline be below or above ground? How deep would the pipe be buried? How far apart would the mainline block valves (MLBVs) be located? Where would the compressor stations be located? |  |  |
| 4    | Stakeholder Issue       | How much gas would come out of Point Thomson?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
| 5    | Stakeholder Issue       | How will the EIS evaluate site selection for the LNG facility? Did the project have public comment input for the selection of the LNG facility location?                                                                                                                                                                                                                                                                                                                                                                                  |  |  |

| 6  | Stakeholder Issue                           | Has the route been finalized? How far away from TAPS would the Alaska LNG gasline be in areas where the pipes would be parallel?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7  | Stakeholder Issue                           | Discussion on routing the gasline through Denali National Park verses going along the route currently shown. Why is the project not following TAPS and going through Fairbanks? Why go through Minto Flats? Going along TAPS and through Fairbanks has a lower environmental impact. I have not seen anything in project information considering a route to Fairbanks. A participant wanted the project to consider a route closer to the Murphy Dome area in order to reduce the distance Fairbanks and other communities would need to build a pipeline to get gas service. Discussion about where the route crosses the Yukon River. |
| 8  | Stakeholder Issue                           | How long would construction last?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 9  | Stakeholder Issue                           | A meeting attendee was concerned about his parcel of land, but it is unlikely the project would need it.<br>Could motorized vehicles be driven over the buried pipe? Landowners should be compensated if the<br>pipeline comes across their land.                                                                                                                                                                                                                                                                                                                                                                                       |
| 10 | Stakeholder Issue                           | Fairbanks needs a less expensive source of energy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 11 | Stakeholder Issue                           | Have the off-take locations been decided? When will the off-takes be announced?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 12 | Stakeholder Issue                           | Are the maps on the project website?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 13 | Stakeholder Issue                           | How does the EIS work in regards to site selection for the LNG facility? The NEPA review needs to comprehensively include alternatives analyses for the pipeline routes to the various LNG terminus locations.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 14 | Stakeholder Issue                           | How do companies become a contractor for the project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 15 | Stakeholder Issue                           | Where could materials for the pipeline be sourced?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16 | Stakeholder Issue                           | Land along the Denali National Park route is used for skiing, mushing, snowmachining, and hunting.<br>We are concerned about how the project is going to access this land. What would be the potential impact to hunting?                                                                                                                                                                                                                                                                                                                                                                                                               |
| 17 | Stakeholder Issue - FERC<br>Scoping Comment | How far apart are the emergency shut down valves? What are the demolition plans for when the project is complete and the gas is all used? Does the FERC process have any say in disposition of the carbon dioxide from the gas plant and the liquefaction plant?                                                                                                                                                                                                                                                                                                                                                                        |
| 18 | Stakeholder Issue - FERC<br>Scoping Comment | Would the project re-inject or vent the carbon dioxide that is taken out of the gas?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 19 | Stakeholder Issue - FERC<br>Scoping Comment | We support this project. The project should consider alternative energy resources. The project should look into high-voltage direct current (HVDC) lines as an alternative to natural gas.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 20 | Stakeholder Issue - FERC<br>Scoping Comment | The project should use existing rights-of-way. The project should look into all of the proposed routes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 21 | Stakeholder Issue - FERC<br>Scoping Comment | The pipeline should go down the existing Elliott Highway. The pipeline route should pass east of Fairbanks near Old Murphy Dome Road, which has an existing firebreak and right-of-way. The pipeline route should come through Fairbanks. A spur line to Fairbanks would be too expensive; the pipeline should come straight through Fairbanks.                                                                                                                                                                                                                                                                                         |
| 22 | Stakeholder Issue - FERC<br>Scoping Comment | The pipeline should go from Prudhoe Bay to Valdez. The pipeline should follow the TAPS corridor to Valdez. Valdez is more favorable for the LNG plant and marine terminal. The existing infrastructure makes Valdez more appealing for the LNG facility and marine terminal. Vessel traffic is safer in Valdez, there are no huge tides and no ice. The project would save money if it were routed to Valdez. The Valdez route allows Eielson Air Force Base and National Missile Defense areas to have access to gas.                                                                                                                  |
| 23 | Stakeholder Issue - FERC<br>Scoping Comment | The project should pay rent for personal properties that it crosses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 24 | Stakeholder Issue - FERC<br>Scoping Comment | Fairbanks should have an off-take.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 25 | Stakeholder Issue - FERC<br>Scoping Comment | The Towerhill Mine near Livengood could potentially use a lot of natural gas. A spur line to Fairbanks should be included in the EIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 26 | Stakeholder Issue - FERC<br>Scoping Comment | Local input needs to be considered in the planning process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 27 | Stakeholder Issue - FERC<br>Scoping Comment | The project should avoid Congressional Executive Privilege for decisions on this project. FERC should consider an adaptive management alternative as part of their environmental review.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 28 | Stakeholder Issue - FERC<br>Scoping Comment | The mechanical contractors of Fairbanks are ready to start this project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|      |    |    |    |

| 29 | Stakeholder Issue - FERC<br>Scoping Comment | The project should work to minimize the footprint of the utility corridor near the Yukon River. The project should minimize negative environmental impacts.                                                                              |
|----|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30 | Stakeholder Issue - FERC<br>Scoping Comment | The permafrost north of the Brooks Range is getting warmer and easier to impact.                                                                                                                                                         |
| 31 | Stakeholder Issue - FERC<br>Scoping Comment | Has the project looked into the possible earthquakes?                                                                                                                                                                                    |
| 32 | Stakeholder Issue - FERC<br>Scoping Comment | How would a tanker spill impact Cook Inlet?                                                                                                                                                                                              |
| 33 | Stakeholder Issue - FERC<br>Scoping Comment | The Valdez route does not impact the salmon runs in the Susitna River. The Valdez routes protects the endangered Beluga whales.                                                                                                          |
| 34 | Stakeholder Issue - FERC<br>Scoping Comment | The past development projects have impacted subsistence hunting. How would the project impact hunting areas? The Valdez route does not impact the Minto Flats, a heavy subsistence area. The Minto Flats wetland area has extreme value. |
| 35 | Stakeholder Issue - FERC<br>Scoping Comment | Air quality is a huge concern in Fairbanks. The air quality in Fairbanks is bad, and Alaska LNG could solve that problem.                                                                                                                |
| 36 | Stakeholder Issue - FERC<br>Scoping Comment | The project should take into consideration the possibility of forest fires.                                                                                                                                                              |

| 1    | Stakeholder Issue - FERC<br>Scoping Comment | The pipeline should follow the TAPS right-of-way to Valdez. Valdez is the preferred location for the LNG facility. The Valdez route allows for less environmental impact. The existing infrastructure in Valdez requires less clearing and grading for the pipe. Valdez is a safer option because it is an ice free port year around. The marine pilots prefer the Port of Valdez. The project will save a lot of money by going to Valdez. |  |  |  |

| 2  | Stakeholder Issue - FERC<br>Scoping Comment | We support the project. The state needs this project to go forward.                                                                                                                                                                                                                                                                                |
|----|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3  | Stakeholder Issue - FERC<br>Scoping Comment | An alternative solution could be shipping the LNG from West Dock on the North Slope directly to Asia, then building an ASAP-sized line to Fairbanks.                                                                                                                                                                                               |
| 4  | Stakeholder Issue - FERC<br>Scoping Comment | This project is not good for the Denali region. The seven year horizon of construction would put a big hindrance on the tourism industry in Denali. The pipeline can provide more opportunities for tourism; people come to Alaska to see the pipeline.                                                                                            |
| 5  | Stakeholder Issue - FERC<br>Scoping Comment | There are two large potential mining projects on the west side of Cook Inlet that could use the gas from this line.                                                                                                                                                                                                                                |
| 6  | Stakeholder Issue - FERC<br>Scoping Comment | The number of jobs that the project would create is impressive.                                                                                                                                                                                                                                                                                    |
| 7  | Stakeholder Issue - FERC<br>Scoping Comment | The project should look into the erosion issues that could occur during construction.                                                                                                                                                                                                                                                              |
| 8  | Stakeholder Issue - FERC<br>Scoping Comment | There is concern for impact to beluga whale habitat. There is a concern about the beluga whale critical habitat being impacted. The federal government has failed in protecting endangered species in Cook Inlet.                                                                                                                                  |
| 9  | Stakeholder Issue - FERC<br>Scoping Comment | How would the project respond to a volcano eruption? Concern for volcanoes near Beluga impacting the project. The current proposed route crosses too many fault lines.                                                                                                                                                                             |
| 10 | Stakeholder Issue - FERC<br>Scoping Comment | The Valdez route can provide Fairbanks with natural gas and help them fix their air quality issue. Air quality in Fairbanks is a health concern.                                                                                                                                                                                                   |
| 11 | Stakeholder Issue - FERC<br>Scoping Comment | The project should look into the maritime navigational risk of shipping LNG.                                                                                                                                                                                                                                                                       |
| 12 | Stakeholder Issue - FERC<br>Scoping Comment | How would a tanker spill in Cook Inlet impact the endangered species? The EIS should require standards for methane leakage.                                                                                                                                                                                                                        |
| 13 | Stakeholder Issue - FERC<br>Scoping Comment | The project should look into lessening its carbon footprint. The climate change impact should be taken into consideration in the study. How would the emissions of the tankers and loading facility impact the water in Cook Inlet?                                                                                                                |
| 14 | Stakeholder Issue                           | How is the project progressing on the design? Is AGDC getting more support than the ASAP<br>Project? What is new since the last presentation in Nikiski?                                                                                                                                                                                           |
| 15 | Stakeholder Issue                           | Where are the liquids stripped from the gas? Is there a lot of liquid in the gas? What would happen to the liquid?                                                                                                                                                                                                                                 |
| 16 | Stakeholder Issue                           | Where would the LNG facility be located in Nikiski? How big are the tanks in Nikiski going to be? Could the project save money if AGDC took over the LNG facility and renovated facilities already in the area?                                                                                                                                    |
| 17 | Stakeholder Issue                           | We would prefer the project follow the TAPS corridor and send the LNG out of Valdez. The choice of Nikiski was purely political.                                                                                                                                                                                                                   |
| 18 | Stakeholder Issue                           | Where does the pipeline cross TAPS? Does it cross over the top and how?                                                                                                                                                                                                                                                                            |
| 19 | Stakeholder Issue                           | Questions regarding the routing and location of the pipeline crossing Cook Inlet. Would the easterly or westerly route affect land status near Nikiski?                                                                                                                                                                                            |
| 20 | Stakeholder Issue                           | Questions regarding the routing and location of the pipeline in the Denali National Park area. I am concerned about the current proposed route which suggests going through Denali National Park at Nenana Canyon. I am concerned about potential impacts to the Glitter Gulch area. I would like the Intertie shown in better detail on the maps. |
| 21 | Stakeholder Issue                           | How soon will the gravel sites be determined?                                                                                                                                                                                                                                                                                                      |
| 22 | Stakeholder Issue                           | What is the estimated longevity of the gas supply?                                                                                                                                                                                                                                                                                                 |
| 23 | Stakeholder Issue                           | Is an access road planned on Ahtna land? Would the access road be a private road?                                                                                                                                                                                                                                                                  |
| 24 | Stakeholder Issue                           | Would there be five off-take points? Why not build a small line to Fairbanks and send the rest out to the Bering Sea?                                                                                                                                                                                                                              |
| 25 | Stakeholder Issue                           | How much acreage does each off-take point require? Would an off-take point require a right of way?                                                                                                                                                                                                                                                 |
| 26 | Stakeholder Issue                           | How is the soil in Nikiski? What were the machines I saw drilling holes?                                                                                                                                                                                                                                                                           |
| 27 | Stakeholder Issue                           | How can I see the preferred route maps online? Is there an office I can visit to see these map books again later? Note that pages 117 and 118 in map book are transposed. Would residents be able to give input on which route near Nikiski is chosen? Does the project have exp's details available?                                              |

 Alaska LNG,
 MINUTES OF MEETING (MOM)
 DCN tbd

 CONFIDENTIAL
 DCN tbd
 02-Nov-16

 Revision: Final
 Revision: Final
 Page 3 of 3

| 28 | Stakeholder Issue | Has Ahtna been contacted?                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29 | Stakeholder Issue | Are studies on the heat-affected zones being done? I am concerned they will write off frequencies as anomalies. What is the carbon footprint of the whole project? What is the amount of power consumption at the GTP and LNG facility? The project should look into CB&I Power for carbon dioxide turbine generators, and should capture as much carbon dioxide as possible on the North Slope. Has the project looked at combustion turbines for the North Slope? |

| 1    | Stakeholder Issue | Fundamentally our concerns are that the development of the Alaska LNG project within the North Peninsula Community Council (NPCC) area needs to meet the goals of the Kenai Peninsula Borough (KPB) long range community/economic development plan. The long term interests of the residents of the Kenai Peninsula are best served through the development of a 25 year community/economic development plan as the scope of this project has generational impact and requires greater foresight than what the current long rang community/economic development plan will address. Originally developed by the NPCC in 2001 and revised in 2012 the Community Action Plan set goals for the unincorporated North Kenai Peninsula area. These goals were used in the Borough's 10-year community/economic development plan. NPCC is concerned that as an unincorporated area without a formal governing body other than the Kenai Peninsula Borough, decisions concerning the development of the Alaska LNG Project by the KPB and/or the State of Alaska will be made without the guidance of a 25-year plan. |  |  |
| 2    | Stakeholder Issue | The highway relocation must include an assessment of the current growth trends of the North Kenai area as well as expected impacts by the Alaska LNG Project. Evidence suggests that recent growth has been along the Holt Lamplight/Miller Loop corridor in close vicinity to the North Star Elementary school. The historical "City Center" of Nikiski, in vicinity of the Post Office, shopping mall and gas station, has recently experienced more commercial growth than residential growth. The highway relocation has the potential to further fragment our community or provide an avenue to improve it. Decisions on potential highway relocation options should take into consideration the community growth projections of the KPB 25-year community/economic development plan, especially in light of where the additional residential construction is expected to occur in order to support the construction and operational periods of the project.                                                                                                                                             |  |  |
| 3    | Stakeholder Issue | Water quality and quantity is vitally important. The community must be assured that during and after construction continual access to clean drinking water is neither restricted nor negatively impacted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| 4    | Stakeholder Issue | Waste during all phases of the Alaska LNG project must be handled according to federal, state, and borough guidelines and that a long term solution for continual waste disposal be included in the KPB 25-year community/economic development plan. We ask that any resources, as defined by the Division of Subsistence, be offered to the community. We are a rural community and many of our members annually harvest Alaska's resources, including timber, to be used as fuel for the winter heating season.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
| 5    | Stakeholder Issue | The McGahan Industrial Airpark, located in Nikiski, has the potential to handle increased air traffic connected to growth in the area. Although it is a privately held airfield, any impact of increased air traffic to the Kenai airport could be mitigated with the development of this resource and would be a long-term benefit to all residents and businesses of the North Kenai Peninsula.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| Alaska LNG. | MINUTES OF MEETING (MOM) | DCN tbd<br>02-Nov-16<br>REVISION: FINAL |

|             |                          |                                         |

| 6 | Stakeholder Issue | The North Peninsula is a unique rural area which supports our recreational needs through Service Area property taxes and fees. The current level of services or the capacity to become a recreational area for an increased number of visitors will require additional resources that should be addressed in the KPB 25-year community/economic development plan. Current access to Cook Inlet beaches, restricted or eliminated during construction, must be replaced with equivalent access for the uninterrupted recreational use of our popular beaches.                    |
|---|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7 | Stakeholder Issue | An increase in population and residential and commercial growth during the construction and operational periods of the project will impact the current fire, police and other emergency services. In order to adequately prepare for this impact, the KPB 25-year community/economic development plan should provide the appropriate analysis to enable the KPB to provide adequate services for the North Peninsula residents.                                                                                                                                                 |
| 8 | Stakeholder Issue | Public beach access for the purpose of commercial, personal-use and subsistence fishing must be maintained during the construction and operational periods of the project. The Cook Inlet beach area in the proposed Alaska LNG corridor has historically been used for commercial, personal-use and subsistence fishing. It is important that this resource, which many Nikiski families use not only for food but as a traditional source of income, be respected. Note that Commercial fishing has not been interrupted in the past by oil and gas production in Cook Inlet. |

| 2    | Stakeholder Action Item                             | Get back to Bob Shavelson about potential Clean Water Act discharge permits for the LNG facility.                                                                                                                                                                                                                                                                                                           |  |  |
| 3    | Stakeholder Issue                                   | Attendee asked what Clean Water Act discharges the project would seek permits for at the LNG facility.                                                                                                                                                                                                                                                                                                      |  |  |
| 4    | Stakeholder Issue                                   | Attendee asked whether Alaska LNG's 2016 budget had been approved by the partners.                                                                                                                                                                                                                                                                                                                          |  |  |
| 5    | Stakeholder Issue                                   | Attendee was concerned other projects globally for ExxonMobil would compete with the Alaska LNG Project. Attendee expressed concern for ExxonMobil being the lead partner.                                                                                                                                                                                                                                  |  |  |
| 6    | Stakeholder Issue                                   | An audience member asked about the pipeline routing crossing the upper Cook Inlet.                                                                                                                                                                                                                                                                                                                          |  |  |
| 7    | Stakeholder Issue                                   | Participant said he had concerns about the manner in which the Alaska LNG representatives and the State of Alaska are representing the state gas off-takes. He said he assumed that the cost of the domestic gas would be calculated based on what it takes to produce it and liquefy it.                                                                                                                   |  |  |
| 8    | Stakeholder Issue                                   | Participant suggested that project profits/proceeds be directed towards sustainable development in Alaska.                                                                                                                                                                                                                                                                                                  |  |  |
| 9    | Stakeholder Issue                                   | One audience member stated he witnessed a "bust" after the "boom" of the Trans-Alaska Pipeline System (TAPS) construction, and asked what Alaska LNG was doing to mitigate the "bust." Another audience member stated on her concerns about the same subject and more specifically, how she thought there would be numerous jobs for a few years, and then a significant reduction in project-related jobs. |  |  |
| 10   | Stakeholder Issue                                   | One audience member said Alaska LNG's estimated 9,000-15,000 construction workers (and potentially families) would not pay income taxes, but would be a burden to the emergency and community services. The community member also asked about Payments in Lieu of Taxes (PILT) negotiations.                                                                                                                |  |  |
| 11   | Stakeholder Issue                                   | How is Alaska LNG addressing climate change?                                                                                                                                                                                                                                                                                                                                                                |  |  |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 1    | Discussion        | Nikiski Community Council – 12/7/15 Meeting Notes 22 in attendance Notable attendees include:<br>Representative Mike Chenault, Senator Peter Micciche, Wayne Oagle (KPB assembly member) AK<br>LNG: Josselyn O'Connor Please see attached agenda. Old Business 1 – NCC has written a letter to<br>the Kenai Peninsula Borough mayor encouraging the Borough to explore the options of partnering<br>with AK LNG on ground water studies. NCC has \$9,876 left in a grant to continue groundwater<br>studies. The previous study is on the Borough's website. Old Business 4b – Larry Persily was not in<br>attendance, but Josselyn O'Connor reminded the group that Larry and the KPB are holding another<br>meeting on Thursday, Dec. 10 at 6:30 at the Nikiski Rec Center. Old Business 4c – Josselyn<br>O'Connor presented the following Alaska LNG items: • 2016 budget and work plan was approved •<br>FERC scoping closed on Dec. 4th – they will continue to accept comments, the project will answer<br>those concerns/comments soon • Explained the FERC process, 2nd draft of resource reports, timing<br>of the final resource reports, issue of EIS and public input • AK LNG is planning a public meeting<br>102016 – will include lots of information • AK LNG is looking forward to working with the schools in<br>2016 Questions asked: Is what the media says about ExxonMobil's involvement true? Are they<br>holding up this project? Mike Chenault answered that we need to plan for success. Micciche<br>answered that we must have ExxonMobil involved or this project will not happen. Josselyn O'Connor<br>explained that as a project team member her experience is that ExxonMobil is very much committed<br>to this project. She explained examples: direct ExxonMobil employees dedicated to this project, level<br>of capital/resource invested, acting as lead entity, and energy of the project takes very seriously safety<br>and security issues across the entire length of this project and it will continue to be a top priority as we<br>move forward. New Business 6 – NCC committee was asked to draft FERC comments, met 2X,<br>drafted and submitted |  |  |
| 2    | Stakeholder Issue | An attendee inquired about status of the Kenai Spur Highway relocation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |

| 3 | Stakeholder Issue | Is ExxonMobil holding up this project?                                                                                                                                                          |
|---|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4 | Stakeholder Issue | Participant asked Alaska LNG about old building materials on project-purchased properties.                                                                                                      |
| 5 | Stakeholder Issue | The Nikiski Community Council has written a letter to the Kenai Peninsula Borough (KPB) mayor encouraging the KPB to explore the options of partnering with Alaska LNG on ground water studies. |
| 6 | Stakeholder Issue | Attendee asked Alaska LNG if there is a plan for the environmental organizations who may oppose the project, and thought the community needs to be ready for them.                              |
| 7 | Stakeholder Issue | Will the Alaska LNG Project have a military presence?                                                                                                                                           |

| 1    | Stakeholder Action Item | Add participants to the mailing list.                                                                                                                                                                                                          |  |  |
| 2    | Stakeholder Action Item | Email Jerryne Cole for more email addresses to add to the mailing list.                                                                                                                                                                        |  |  |
| 3    | Stakeholder Action Item | Verify route in relation to land owned by Janet Powers. Q4 2015.                                                                                                                                                                               |  |  |
| 4    | Stakeholder Action Item | Mr. Hinman said he has 40 acres around Milepost 515 of the pipeline that could be used for staging.<br>Send this information to Dave Sinclair, Luke Marodi, Jay Moylan, and Ross Sorenson.                                                     |  |  |
| 5    | Stakeholder Issue       | What does MLBV mean? Will the project add sand if needed? Questions regarding the operating and maximum pressure of the mainline. Is the pipeline buried through Atigun Pass? How deep would the pipeline be buried? What are heater stations? |  |  |
| 6    | Stakeholder Issue       | Would Cook Inlet need to be dredged? Would the ships be bigger than ones currently coming out of Nikiski?                                                                                                                                      |  |  |
| 7    | Stakeholder Issue       | Who funds the pipeline and will the federal government contribute any money?                                                                                                                                                                   |  |  |
| 8    | Stakeholder Issue       | A resident said he has 40 acres around Milepost 515 of the pipeline that can be used for staging.<br>Alaska LNG has his contact information.                                                                                                   |  |  |
| 9    | Stakeholder Issue       | Attendee wanted to see the laydown yard locations. How far apart are the access roads? We heard they would be every quarter mile.                                                                                                              |  |  |

| 10 | Stakeholder Issue                           | Where is the route in relation to Denali National Park? Feedback was mixed; many understood the benefits of a Denali National Park route but were concerned about how the alternate route through Denali National Park may impact their land near McKinley Village. Does the Parks Highway run through part of Denali National Park? Why does the project not follow the Denali National Park road? Discussions on construction in the Nenana canyon area where the pipeline runs right next to the road. One resident commented that the state was blasting to move the rock back away from the highway. Janet Powers discussed previous route maps that showed the pipeline going under Jim Creek and through her driveway. The map book now shows that the route is on the other side of the highway and not on her land; she said ASAP drilled on her land. Run the pipeline through Denali National Park; there is lots of room in there. What is the project doing around McKinley Village? Where would the access road be located? The railroad is in the middle of everything the project would do in the Denali National Park area. |  |
|----|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 11 | Stakeholder Issue                           | How long would construction last? Attendees stated that they do not want construction during tourist season.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 12 | Stakeholder Issue                           | Why does the project not use the railroad right of way? How wide is the pipeline right of way, adjacent to the Park Highway right of way, when going through the Nenana canyon? Would the project need a 180 foot wide right of way at that location [Nenana Canyon]? Would the project right of way overlap or be adjacent to the Intertie?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 13 | Stakeholder Issue                           | Who decides on off-takes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 14 | Stakeholder Issue                           | Did Alaska LNG do the GeoTech data (borings) in the area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 15 | Stakeholder Issue                           | There was a discussion on local hire during the Healy FERC Q&A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 16 | Stakeholder Issue                           | ADOT&PF has gravel pits that could be used for this project. (In reference to the gravel pit at Milepost 522 of the pipeline.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 17 | Stakeholder Issue                           | What will happen if the pipe ruptures? Would the project regularly go along the entire route and inspect the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 18 | Stakeholder Issue                           | Does the project reclaim the land used for access roads?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 19 | Stakeholder Issue                           | How does the heater station noise compare to compressor station noise? How much noise do compressor stations make? Citizens are concerned about noise pollution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 20 | Stakeholder Issue                           | We [in the Healy area] are concerned with the impact on land used for local recreation. An owner of a local horse riding tour company stated that she believes the pipeline will harm her business because she gives trail rides in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 21 | Stakeholder Issue - FERC<br>Scoping Comment | Would the temporary access roads be reclaimed? What would happen to the project infrastructure upon closure?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 22 | Stakeholder Issue - FERC<br>Scoping Comment | How big would the LNG tankers be coming into the marine terminal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 23 | Stakeholder Issue - FERC<br>Scoping Comment | How far apart would the construction access roads be and where would they be located?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 24 | Stakeholder Issue - FERC<br>Scoping Comment | The tourism economy in the Denali Borough should be protected. Concern for tourism industry with proposed route through Nenana Canyon. Disruptions during construction should be assessed. How would the project impact tourism and businesses in Greater Denali area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 25 | Stakeholder Issue - FERC<br>Scoping Comment | Would there be public access to the pipeline corridor? Would there be access to construction roads?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 26 | Stakeholder Issue - FERC<br>Scoping Comment | Healy is interested in year-round jobs with the project, such as at pump stations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 27 | Stakeholder Issue - FERC<br>Scoping Comment | What mitigation is there for fish habitat potentially impacted by increased marine traffic in the Nikiski area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 28 | Stakeholder Issue - FERC<br>Scoping Comment | Our local government is limited in the Denali Borough, and our small communities have limited ability to take advantage of project impact data and potential changes to the economy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 29 | Stakeholder Issue - FERC<br>Scoping Comment | Please fully consider all the socioeconomic impacts the project could have on Healy, especially during the construction boom. Attendee brought concern for the project hindering future development in the Denali Borough with in-progress title exchange for state/borough selected lands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 30 | Stakeholder Issue - FERC<br>Scoping Comment | The corridor passes the boundary of Gates of the Arctic National Park and Denali National Park, which are designated as wilderness. The project should consider the impact it may have on the wilderness character, including viewshed changes and noise levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |

| 31 | Stakeholder Issue - FERC<br>Scoping Comment | What is the carbon footprint for this project? I would like to see climate change impacts considered in the EIS. Is the project aware of the executive order and draft guidance for agencies to consider climate change and greenhouse gases? |
|----|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32 | Stakeholder Issue - FERC<br>Scoping Comment | Would there be dredging in Cook Inlet? If there is dredging, what kind of impacts could there be?                                                                                                                                             |
| 33 | Stakeholder Issue - FERC<br>Scoping Comment | Considers impacts to noise levels and viewsheds. Concern raised for noise from compressor stations.                                                                                                                                           |
| 34 | Stakeholder Issue - FERC<br>Scoping Comment | Concern for potential impacts to recreational wilderness used by local residents. Concern for impacts to recreation from construction access roads.                                                                                           |

| 1                               | Meeting Notes and Discusstion | 28-30 in attendance ADF&G presented findings from Subsistence Survey in the Nikiski area. They stated Alaska LNG helped pay for the survey. Fred Braun - stated to the group that Alaska LNG has a job to do. The community needs to be respectful to the Project reps at future community meetings. KSH Meeting feedback - too many options shown, 5 lanes needed, think the Project already knows the route Larry Persily (KPB) - hosting two meetings in Nikiski to connect directly with the community. Larry also handed out two maps prepared by the Borough (1:KSH options, 1: LNG facility in detail) |  |  |  |
| 2                               | Stakeholder Issue             | There were too many options shown for the Kenai Spur Highway Relocation. Attendee stated five lanes are needed. Attendee stated he thinks the project already knows the finalized route.                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
| 3                               | Stakeholder Issue             | Participant stated to the group that Alaska LNG has a job to do and the community needs to be respectful to the project representatives at future community meetings.                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |

| 1 | Project update presented to representatives of the Knik Tribe | On Wednesday February 3, 2016, representatives of Alaska LNG met with representatives of the Knik Tribe and affiliate organizations. The meeting took place at the offices of E3 Environmental, LLC in Anchorage. Rosetta Alcantra introduced the meeting participants. Michael Nelson provided a brief project update, discussed the status of FERC Resource Reports as well as some information about upcoming field work in 2016. Bob Charles discussed the current Alaska LNG western pipeline route, talked about its potential impacts to wetlands and cultural resources, and displayed a digital map showing the Alaska LNG pipeline route overlaid on wetlands as well as known and potential cultural resource sites. Mr. Charles also presented new alignment options prepared by Knik that may reduce impacts to wetlands and cultural resource sites, yet still routes the pipeline to Beluga before crossing Cook Inlet. Mr. Charles suggested that Alaska LNG pipeline engineers study the proposed alignment options to see if they are feasible. Mr. Charles indicated that he will provide Alaska LNG with the digital files necessary to evaluate the Knik koptions. A hardcopy paper map was provided as well. Mr. Charles showed aerial photos of the old Beluga Pipeline route and the ground scaring that is still evident through wetlands. He asks that we try to avoid a similar outcome with the Alaska LNG pipeline. Richard Martin spoke about the richness and diversity of cultural resources scattered through wetlands. Specifically he said the Deshka River and at the mouth of the Susitna River are areas containing dense clusters of cultural resources. Mr. Martin asked that the Project more closely coordinate with the Knik Tribe about the upcoming cultural resource surveys throughout the Susitna River indicated that Knik is looking for opportunities to do business with and provide services to the Alaska LNG Project. Mark Jennings mentioned the upcoming business information sessions later this spring and encouraged Benteh EEIS to atteed and make professional c |
| 2 | Stakeholder Issue                                             | Are there alternative routes for the ASAP Pipeline? Has the project talked to anyone from the pipeline team about the alternative route proposed by the tribe?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3 | Stakeholder Issue                                             | Knik Tribal Council could provide the project with the GIS data points for the tribe's alternative route.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 4 | Stakeholder Issue                                             | There is so much about the cultural sites that is not understood. Does the project really want to go in and disturb these poorly understood areas when there are known viable alternatives that have extremely low impact on the environment. The Dena'ina people have burial grounds along the creeks where the project wants to build, and it's very hard to discern the locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 5 | Stakeholder Issue                                             | Nobody has ever approached the tribe to ask "What is your interpretation? Do you want to help?"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 6 | Stakeholder Issue                                             | The Knik Tribe has archaeological capabilities to do cultural resource surveys along the affected area. The tribe is familiar with the oil and gas industry and now has process and instrumentation personal. We offer engineering services and the project only gets billed for the work completed. A project manager would be assigned to the project, but you would not be billed unless he was working on the project. We have 30-40 years of experience in Anchorage, North Slope, and western Alaska. Does the project have a company that does project procurement? Does the project have a cultural resources person from Tyonek? We have not only knowledge, but the skills that would allow for a partnership. Another capability we are competitive with is field crews and vehicles at lower or equal pricing. Knik Tribal Council will send you, and/or your procurement team, information about our company.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 7 | Stakeholder Issue                                             | The Knik Tribe has archaeological capabilities to do cultural resource surveys along the affected area. The tribe is familiar with the oil and gas industry and now has process and instrumentation personal. We offer engineering services and the project only gets billed for the work completed. A project manager would be assigned to the project, but you would not be billed unless he was working on the project. We have 30-40 years of experience in Anchorage, North Slope, and western Alaska. Does the project have a company that does project procurement? Does the project have a cultural resources person from Tyonek? We have not only knowledge, but the skills that would allow for a partnership. Another capability we are competitive with is field crews and vehicles at lower or equal pricing. Knik Tribal Council will send you, and/or your procurement team, information about our company.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 8 | Stakeholder Issue | Knik Tribal Council is asking the project to present the impact of the Beluga pipeline route to the team as a measuring tool against the proposed alignment of the upper Susitna River. For the Beluga to Anchorage pipeline there are large stretches of wetland bog vegetation with 18-foot wide water-filled trenches on the Susitna flats that have not been able to recover after 30+ years. The pipeline has also left exposed blocked valves in water-filled areas. When you look at the Susitna valley, all the wetlands are to the west, it would be easier to route the pipeline through dry areas on the east. It is uncertain how long vegetation would take to grow back from the effects of building a pipeline through the wetlands. |
|---|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9 | Stakeholder Issue | The Alaska LNG pipeline will affect a lot of cultural aspects, e.g. Beluga through under Cook Inlet. A few concerns we have are connected to the cultural resources, as mentioned, people need food, dry land, water, and transportation. Cultural sites have been identified long ago, are great for Knik conservation district's concern with natural resources.                                                                                                                                                                                                                                                                                                                                                                                  |

| 1    | Summary                         | Representative Sam Kito III, who is involved in the Alaska Professional Design Council, requested the presentation. We presented a Project overview to approximately 25-30 technical professionals (engineers, architects, etc.) in Juneau over lunch during their "legislative fly-in." The audience was supportive of the Project and had technical questions that included topics such as: - is there H2S in the gas? What will be done with the H2S and CO2? - what is the operating pressure of the gas? - how was the Nikiski site selected - what are the most challenging regulatory issues faced? - what is the plan for in-state gas delivery Participants were provided a copy of the presentation and it was suggested that they look online for further Project information as well as to register their business or organization for future communications. |  |  |

| 2  | Stakeholder Action Item | Arrange to speak with the Kenai Young Professionals                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 3  | Stakeholder Issue       | The bypass for Nikiski is not big enough. The highway was planned many years ago, and now it is being turned into a 2-lane road that makes travel to Kenai 2.5 miles longer one way. The project should straighten out the road with one that will handle the traffic. For the road, 2-lanes is not enough, it needs to be at least a 5-lane from Kenai to (at least) Island Lake Road, and then disperse into a 2-4 lane road. Is the project coordinating with Tesoro to evaluate the impact of the new road? |  |
| 4  | Stakeholder Issue       | How much money was allocated for the pre-FEED budget? If the economy falls, does the project have an exit strategy? How does the current economic climate of the oil and gas industry affect this project?                                                                                                                                                                                                                                                                                                      |  |
| 5  | Stakeholder Issue       | The project was going to have a definitive plant footprint in March, is it still on schedule?                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 6  | Stakeholder Issue       | Do all of the land acquisitions need to be complete before moving into FEED?                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 7  | Stakeholder Issue       | Do all of the land acquisitions need to be complete before moving into FEED?                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 8  | Stakeholder Issue       | What will the 2016 geophysical and geotechnical program look like? Is the geotechnical data proprietary?                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 9  | Stakeholder Issue       | Have you considered fostering the Kenai Young Professionals Group? In the studies, when does the project start the good neighbor aspect of the project? How many steps does the project have to complete to get through pre-FEED?                                                                                                                                                                                                                                                                               |  |
| 10 | Stakeholder Issue       | What is the project doing to employ/train Alaskans?                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 11 | Stakeholder Issue       | How many local firms are involved with the FEED process? Meeting participants request a written statement that says a certain percentage of jobs will be local hire vs. global hire, as companies in the recent past have either hired locally and then replaced them with global hire simply because they could do it cheaper, or skipped hiring local, because global hire is cheaper.                                                                                                                        |  |

|      | AGENDA ITEMS      |                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|------|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| 1    | Stakeholder Issue | Is the pipeline going to be staffed? What is the pressure in the line going to be? Will the pipe be buried in Cook Inlet? Will the construction road next to the underground pipeline be removed?                                                                                                                                                                                               |  |  |
| 2    | Stakeholder Issue | How big are the LNG ships? How is the gas stored in containers? How many gallons will the ships hold? Are there plans for several additional huge tugboats for Cook Inlet to escort these ships coming and going? Will the tugboats be able to work around our fishing season?                                                                                                                  |  |  |
| 3    | Stakeholder Issue | How will the pipeline cross rivers and streams (under or over)? We are concerned with erosion of stream banks. Where does the pipeline cross the Susitna River? The Beluga River is a dangerous river, with glacier ice dams forming that can break open causing flood damage. This occurs unpredictably.                                                                                       |  |  |
| 4    | Stakeholder Issue | Is this the final location for the pipeline? Do you have another map I can hang in my shop for the community to view? It needs to be a large map that can easily be viewed. Could I have maps from the project this spring?                                                                                                                                                                     |  |  |
| 5    | Stakeholder Issue | I need a map that shows where the pipeline crosses the Beluga River. Is the pipeline, more or less, going to come down the Parks Highway?                                                                                                                                                                                                                                                       |  |  |
| 6    | Stakeholder Issue | How many communities are going to benefit from this pipeline? If going through a community, are they going to be able to tap into the pipeline and use gas instead of diesel?                                                                                                                                                                                                                   |  |  |
| 7    | Stakeholder Issue | What time of the year is the off shore work occurring? Is the seismic work going to include blasting? A couple years ago, they did a lot of seismic work on the other side of Cook Inlet, and you could hear the blast from the small air guns all the way over here. Then we had one not too long ago that left all the holes out there. The project did one that caused a fire at Three Mile. |  |  |
| 8    | Stakeholder Issue | What is a cultural study? Is there a contact person that deals specifically with cultural resource and historic property concerns?                                                                                                                                                                                                                                                              |  |  |
| 9    | Stakeholder Issue | Future meetings should not be on a Monday or Thursday due to fishing.                                                                                                                                                                                                                                                                                                                           |  |  |
| 10   | Stakeholder Issue | The pipeline is going over an earthquake fault which goes along the beach. What about earthquakes?                                                                                                                                                                                                                                                                                              |  |  |

| Alaska LNG. | MINUTES OF MEETING (MOM) | DCN tbd<br>01-Nov-16<br>REVISION: FINAL |
|-------------|--------------------------|-----------------------------------------|
|             | CONFIDENTIAL             | Page 2 of 2                             |
|             |                          |                                         |

| 11 | Stakeholder Issue       | When companies did a lot of work for the coal company, they had helicopters going up and down the beach, which drastically affected the beluga whale. When the whales or fish are coming in, helicopter and boat activity will drastically affect them.                                                        |
|----|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12 | Stakeholder Issue       | All it takes is one noise disturbance to affect the marine mammal activity. The year they used a helicopter, they had biologists counting whales. From April to October they only saw three whales. Usually when the fish are running, the whales are running, too. The whales returned last year, thankfully. |
| 13 | Stakeholder Issue       | Is the pipeline safe to live near?                                                                                                                                                                                                                                                                             |
| 14 | Stakeholder Action Item | Send copies of maps to Beluga.                                                                                                                                                                                                                                                                                 |
| 15 | Stakeholder Action Item | Consult Northern District Setnetters Association about fishing season timing.                                                                                                                                                                                                                                  |

|------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |
| 1    | Stakeholder Issue | Will the pipeline be above or below ground? Will it cross under Cook Inlet? Will the pipeline be visible at low tide? We can see a pipeline at low tide below Tyonek. Is the pipe laying at the sea bed going to affect the current? If you look at the dock while above ground, it still affects current. How will the pipeline be buried in mountain areas? What is the estimate amount of natural gas on the North Slope? Will the gas be compressed inside the pipeline and what is the width of the pipeline? |  |  |
| 2    | Stakeholder Issue | Will there be 15-20 LNG ships per month? Will the LNG carriers go into Nikiski (where the facility is)? Will the LNG plant in Nikiski be located near the beach?                                                                                                                                                                                                                                                                                                                                                   |  |  |
| 3    | Stakeholder Issue | What is the projected life span of the pipeline? How long does the project expect the pipeline to last? What would be the maintenance schedule? We are concerned with study effects on our fishing schedule.                                                                                                                                                                                                                                                                                                       |  |  |
| 4    | Stakeholder Issue | Where is the pipeline crossing Cook Inlet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |
| 5    | Stakeholder Issue | Will the gas be made available to communities along the project route?                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| Alas | ka | LN | IG. |
|------|----|----|-----|
|      |    |    |     |

| 6  | Stakeholder Issue       | Is the project doing studies on the current of Cook Inlet? Where were the surveys conducted in Cook Inlet?                                                                                                                                       |
|----|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7  | Stakeholder Issue       | Are archaeologists coming in before the digging or after? Is the project going to get archaeologists for historical sites? Are the archaeologists walking the historical areas?                                                                  |
| 8  | Stakeholder Issue       | Are you the village liaison or does the project have a village liaison?                                                                                                                                                                          |
| 9  | Stakeholder Issue       | Will there be any land reclamation work on the construction area?                                                                                                                                                                                |
| 10 | Stakeholder Issue       | I am concerned about earthquakes; there were water pipelines broken before from them. Are there earthquake studies being conducted?                                                                                                              |
| 11 | Stakeholder Issue       | We have a lot of marshy land. Is the project doing more environmental studies? The proposed route is over a lot of wetlands.                                                                                                                     |
| 12 | Stakeholder Issue       | I am concerned about the seals, belugas and salmon in Cook Inlet. Are the waterfowl included in the project studies? If not, they should be included.                                                                                            |
| 13 | Stakeholder Issue       | Was there a study on marine mammals and impact of the project on our subsistence needs? Were there any additional marine mammals sighted in addition to the number indicated on the presentation slide?                                          |
| 14 | Stakeholder Issue       | One of the things the project is going to have to look at in the area is invasive plant and fish species.<br>There are invasive northern pike, and opening one lake to another could spread them. Beluga Lake<br>has an over-population of pike. |
| 15 | Stakeholder Issue       | The proposed area of pipeline crossing is a high vessel traffic area.                                                                                                                                                                            |
| 16 | Stakeholder Issue       | Is the project studying the effects of erosion in the rivers and beaches?                                                                                                                                                                        |
| 17 | Stakeholder Issue       | Are there contingency plans for pipeline emergencies? The studies should take into account the possibility of forest fires.                                                                                                                      |
| 18 | Stakeholder Action Item | Bring a pipeline engineer to address questions.                                                                                                                                                                                                  |

|------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ltem | Agenda Item(s)    | Description                                                                                                                                                                     |  |  |
| 1    | Stakeholder Issue | How long will the gas from the project last? What is H2S? Is any natural gas being sent out from North Slope now?                                                               |  |  |
| 2    | Stakeholder Issue | Would the Pt. Thomson gas line only provide 25 percent of the gas for the project? I thought the Pt. Thomson project had 25 trillion cubic feet of gas?                         |  |  |
| 3    | Stakeholder Issue | Would the sand wave oscillation in the Cook Inlet affect the pipeline? Is the property for the project secured?                                                                 |  |  |
| 4    | Stakeholder Issue | Will the project go through Port MacKenzie? How long is the pipeline crossing of the Cook Inlet?                                                                                |  |  |
| 5    | Stakeholder Issue | What is involved to develop and maintain the pipeline offtakes? How much will it cost to build an offtake?                                                                      |  |  |
| 6    | Stakeholder Issue | How far away is the project willing to buy gravel from? If a company such as Seth Corporation develops a way to provide gravel at a competitive rate, would the project buy it? |  |  |
| 7    | Stakeholder Issue | Why is the project trying to stay out of Minto Flats? Is the project considering routing the pipeline through the Minto Management Area?                                        |  |  |

|------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                      |  |  |
| 1    | Stakeholder Issue | Is the pipeline going to allow for expansion?                                                                                                                                                                                                                                                                                    |  |  |
| 2    | Stakeholder Issue | How does the pipeline cross the Yukon River or any of the rivers?                                                                                                                                                                                                                                                                |  |  |
| 3    | Stakeholder Issue | Why does the pipeline route go from Livengood straight down and then to Minto Flats?                                                                                                                                                                                                                                             |  |  |
| 4    | Stakeholder Issue | Is the project's main office is in Anchorage?                                                                                                                                                                                                                                                                                    |  |  |
| 5    | Stakeholder Issue | Rampart Corporation is holding our annual meeting in July; it might be a good time for the project to come to Rampart to fill in the rest of the board about the project. Updated - July 2016 Rampart agenda for the July meeting was full. The project will schedule a meeting with Rampart Leadership during AFN October 2016. |  |  |
| 6    | Stakeholder Issue | We want Rampart's youth to become educated, gain management positions and acquire useful skills. The Trans-Alaska Pipeline System (TAPS) made promises about employment and training that were not kept.                                                                                                                         |  |  |
| 7    | Stakeholder Issue | It would be nice if the project would provide money for scholarships.                                                                                                                                                                                                                                                            |  |  |
| 8    | Stakeholder Issue | Is the project looking for Rampart's approval?                                                                                                                                                                                                                                                                                   |  |  |

|      | ACTION ITEMS                                                        |           |            |  |  |

| 1    | Stakeholder Issue | Where would the off take points be located?                                                                      |  |  |
| 2    | Stakeholder Issue | What we want to know is what benefits will the villages get from the project? Who is all this gas going to help? |  |  |
| 3    | Stakeholder Issue | During the TAPS renewal process, it was discovered the contract did not include Native hire and training.        |  |  |

| ltem | Item Agenda Item(s) Description |                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 1    | Stakeholder Issue               | How close is the pipeline to Allakaket?                                                                                                                                                                                                                                                                                                         |  |  |
| 2    | Stakeholder Issue               | Which of the Allakaket Corporation villages would be impacted by the project?                                                                                                                                                                                                                                                                   |  |  |
| 3    | Stakeholder Issue               | Is the project still visiting the villages?                                                                                                                                                                                                                                                                                                     |  |  |
| 4    | Stakeholder Issue               | What does the project want to know from Allakaket Corporation? Is the project assessing if Allakaket Corporation has resources that can assist with the project? If Allakaket Corporation was in the vendor database, would we receive more updates? Allakaket Corporation has been receiving letters about meetings, is that from the project? |  |  |

|------|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| ltem | Item Agenda Item(s) Description |                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 1    | Update to the council           | - G&G program, smaller than last year, concentrate on pipeline - 20 structures to be demo this summer, 18 of these have environmental concerns - global market for LNG challenging - Tesoro turnaround - we're in communication with them and plan to avoid/stagger field crews - RRs have been pushed back a few months to incorporate optimization efforts - nothing new on Kenai Spur Highway Relocation - nothing new until 2017 |  |  |

|------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Item | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                    |  |  |
| 1    | Stakeholder Issue | What would it take for the project to have a return on investment, as well as a comfortable profit margin?                                                                                                                                                                                                                                     |  |  |
| 2    | Stakeholder Issue | A lot of communities think that running a pipeline through the community equals free gas.                                                                                                                                                                                                                                                      |  |  |
| 3    | Stakeholder Issue | Please consider meeting with Allakaket Corporation in the village of Allakaket in the future.                                                                                                                                                                                                                                                  |  |  |
| 4    | Stakeholder Issue | Allakaket Corporation would like to see Section 29 and 30 of TAPS ROW agreement strengthened, to address sociocultural economics issues, build a subsection for training, and ensure Qualified Native Preference in employment opportunities.                                                                                                  |  |  |
| 5    | Stakeholder Issue | Using Federal Charter Section 17 a tribe can receive its business charter to build capacity to be competitive and place bids. Down the road, Allakeket Corporation can present our brochure and describe our abilities.                                                                                                                        |  |  |
| 6    | Stakeholder Issue | Allakeket Corporation knows industry has programs like ANSEP.                                                                                                                                                                                                                                                                                  |  |  |
| 7    | Stakeholder Issue | Allakeket Corporation needs to consider how the project would impact our community, even if the pipeline is just in neighboring areas, as we have had moose and caribou populations diminish and invasive plants appear.                                                                                                                       |  |  |
| 8    | Stakeholder Issue | Allakeket Corporation is requesting the creation of Alyeska Funded Local Oil Spill Response Team.<br>Allakeket Corporation has grave concerns of a mishap soiling the water.                                                                                                                                                                   |  |  |
| 9    | Stakeholder Issue | If the project goes to EIS process, Allakeket Corporation would advise the tribe to weigh heavily the environmental justice component of NEPA, which would address socioeconomic impacts, and sociocultural impacts of industry activity or detrimental legislation that is a result of industrial activity such as Trans Alaska Oil Pipeline. |  |  |

| ltem | Agenda Item(s)                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 1    | Background                    | There is a group of citizens in Nikiski organizing to submit an application to the Local Boundary Commission to incorporate as a Home Rule City. The group invited Alaska LNG to a meeting on March 26, 2016 and requested a project overview and timeline. The group is required to meet with all area organizations/businesses that may be impacted by their application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 2    | Meeting discussion            | Key topics: Alaska LNG project development phase - current phase and timeline was described to the group. Group objectives - the members of the group explained the process they are working through with the Local Boundary Commission to explore the opportunities of incorporating a home rule city of Nikiski. They stated they were working through their application process and plan to hold community meeting this spring/summer. The group requested an overview and timeline of the Alaska LNG project they can use in their application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 3    | Follow-up email communication | Email sent on 3/30/2016 from Josselyn OConnor to Michele Hartline Nikiski Citizens Incorporation Study Group, Thank you for inviting Alaska LNG to provide a brief project overview and timeline update to your leadership on 3/26/2016. We appreciate the exchange of information. As you requested at the meeting, below is a project overview and the current proposed timeline. Project Overview The Alaska LNG Project is an integrated liquefied natural gas export project that would provide access to gas for Alaskans. The project is anchored by the Prudhoe Bay and Point Thomson fields and is expected to produce approximately 3.3 billion cubic feet of natural gas per day. The Alaska LNG Project includes a natural gas liquefaction plant and storage facilities and an export terminal at Nikiski on the Kenai Peninsula, an 800-mile gas pipeline from southcentral Alaska to the North Slope, a gas treatment plant and transmission lines connecting the project to gas producing fields. The project is expected to produce and export up to 20 million metric tons of LNG per year using clean, energy efficient and safe production methods and technologies. Project Participants BP, ConocoPhillips, ExxonMobil, and the State of Alaska signed a Heads of Agreement (HOA) establishing the guiding principles and basic framework under which the participants will advance the Alaska LNG Project. The State of Alaska was represented in the agreement by the Department of Natural Resources, Department of Revenue and the Alaska Gasline Development Corporation (AGDC). The HOA provided the State of Alaska with the opportunity to invest in the \$45 to \$65 billion project. The Alaska LNG Project teem passed the legislation supporting the state's participants a co-investor and the Governor signed it into law in May 2014. Proposed Timeline The Alaska LNG Project is in the preliminary engineering phase of development. The project team is working to optimize and finalize the project concept, define the project sufficiently to support major regulatory filings, and f |  |  |

| 1    | Discussion highlights           | Josselyn OConnor called Trooper Ryan Tennis to discuss mobilization of the Alaska LNG property abatement and demolition and 2016 G&G field program. Trooper Tennis was informed the property abatement and demolition of 20 properties will begin the week of April 4. He was informed that a kick-off meeting is scheduled for that week and the work will begin immediately. He was informed the work would last several weeks. He was also informed that courtesy notifications are ongoing with various stakeholders. Trooper Tennis was informed the summer G&G program will mobilize soon. Work is beginning offshore in Cook Inlet on the west side near Beluga. The work will progress across the inlet along the pipeline corridor to Boulder Pt. The work will also be taking place offshore near the proposed LNG site in Nikiski. I informed Trooper Tennis we would let him know when additional onshore G&G work begins. In addition, he was informed about the April 14th community meeting. |  |  |

| 1    | Email Communication | Hi all, Many thanks for your continued dedication to serving our community! I take this opportunity to inform you our 2016 marine program will be mobilizing soon. In support of the Alaska LNG Project, ExxonMobil Alaska LNG LLC (EMALL) plans to conduct a geophysical and geotechnical survey program in Cook Inlet. The survey program will collect data for design and route selection of a proposed natural gas pipeline across Upper Cook Inlet and marine facilities proposed near Nikiski. Activities may occur for up to 16 weeks using equipment from up to three vessels. The survey objectives are to characterize the bottom surface and subsurface of Cook Inlet, evaluate seabed features, and identify soil conditions within the Cook Inlet survey area. We are working closely with state and federal agencies on this program, and we are committed to communicating directly with communities and other stakeholders. Cook Inlet Survey Program Details: • Up to 3 vessels (up to 240 feet in length) will conduct the surveys • Primary activities and equipment will include seabed sampling and surveying • Survey activities will occur starting in early April in Cook Inlet on the west side, north of Beluga and continue into the summer months along the potential pipeline routes and in the Nikiski area Thank you for your support in helping the Alaska LNG Project team have another safe and successful survey program in 2016. I will provide another update closer to mobilization of our onshore activities. We invite you to join us at our next community gathering, Coffee with Alaska LNG on April 14th at 6:30pm at the Kenai Visitors & Cultural Center. The project team will be discussing the summer field season in detail with the community. If you have any questions, please don't hesitate to contact us. |  |  |

| 1    | Email communication | Hi all, Many thanks for your continued dedication to serving our community! I take this opportunity to inform you our 2016 marine program will be mobilizing soon. In support of the Alaska LNG Project, ExxonMobil Alaska LNG LLC (EMALL) plans to conduct a geophysical and geotechnical survey program in Cook Inlet. The survey program will collect data for design and route selection of a proposed natural gas pipeline across Upper Cook Inlet and marine facilities proposed near Nikiski. Activities may occur for up to 16 weeks using equipment from up to three vessels. The survey objectives are to characterize the bottom surface and subsurface of Cook Inlet, evaluate seabed features, and identify soil conditions within the Cook Inlet survey area. We are working closely with state and federal agencies on this program, and we are committed to communicating directly with communities and other stakeholders. Cook Inlet Survey Program Details: • Up to 3 vessels (up to 240 feet in length) will conduct the surveys • Primary activities and equipment will include seabed sampling and surveying • Survey activities will occur starting in early April in Cook Inlet on the west side, north of Beluga and continue into the summer months along the potential pipeline routes and in the Nikiski area Thank you for your support in helping the Alaska LNG Project team have another safe and successful survey program in 2016. I will provide another update closer to mobilization of our onshore activities. We invite you to join us at our next community gathering, Coffee with Alaska LNG on April 14th at 6:30pm at the Kenai Visitors & Cultural Center. The project team will be discussing the summer field season in detail with the community. If you have any questions, please don't hesitate to contact us. |  |  |

| Item Agenda Item(s) Description |                   | Description                                                                                                                                                                                                                                                                                                                            |  |  |
|                                 |                   | Was the LNG facility location decision made because there is no available labor in Beluga? On page 7, it says "Castle Mountain faults" – it does not have anything to do with our Castle Mountain, does it?                                                                                                                            |  |  |
| 2                               | Stakeholder Issue | Would it cost less to ship gas from Beluga versus Nikiski? Attendee said they thought the concept of moving gas from the North Slope for export is great and that most people are supportive. The big clinker is the cost and effort of this the project, at over 60 billion dollars. Where does the money for this project come from? |  |  |
| 3                               | Stakeholder Issue | How many miles from Beluga to Nikiski underwater?                                                                                                                                                                                                                                                                                      |  |  |
| 4                               | Stakeholder Issue | What is the schedule to decide on the route?                                                                                                                                                                                                                                                                                           |  |  |

| ltem | Agenda Item(s)    | Description                                                                                                                     |  |  |
| 1    | Stakeholder Issue | Is the pipeline underground? . Is the powerline above or underground? What is the size of this powerline and is it on the maps? |  |  |
| 2    | Stakeholder Issue | How does the current state fiscal situation affect how the project moves this summer?                                           |  |  |
| 3    | Stakeholder Issue | How does this project affect us?                                                                                                |  |  |
| 4    | Stakeholder Issue | Where are the offtakes? Attendee stated that if the offtake was in Trapper Creek, Talkeetna is only 3 miles away by river.      |  |  |
| 5    | Stakeholder Issue | Contact the Sunshine Community Council regarding power line. Lands says information on this will be available in 2017.          |  |  |
| 6    | Stakeholder Issue | Email Ruth Wood the size of power line at tothedogs@mtaonline.net. Complete per Lisa Gray.                                      |  |  |

| 1    | Stakeholder Issue | Invite Miles Baker from the state the next time the project visits the community of Minto.                                                                                                                                                                                                                                                                                                                                                        |  |
| 2    | Stakeholder Issue | Who makes up Alaska LNG? Is the project testing for permafrost? Is the project a stand-alone project? Is the pipeline going to be a 42 or 48-inch? How does the 42-inch pipeline stand up against the 12-inch pipeline - the bullet line?                                                                                                                                                                                                         |  |
| 3    | Stakeholder Issue | Who is funding the project? Could the State tax the pipeline over \$2 billion a year?                                                                                                                                                                                                                                                                                                                                                             |  |
| 4    | Stakeholder Issue | Is the pipeline route set in stone?                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 5    | Stakeholder Issue | Where are the offtake points? Is the state selecting where the offtakes will be located?                                                                                                                                                                                                                                                                                                                                                          |  |
| 6    | Stakeholder Issue | Where are the offtake points? Is the state selecting where the offtakes will be located?                                                                                                                                                                                                                                                                                                                                                          |  |
| 7    | Stakeholder Issue | An attendee requested that the project bring somebody from the state the next time the project comes out to the community.                                                                                                                                                                                                                                                                                                                        |  |
| 8    | Stakeholder Issue | Will there be Native preference hiring; does the project have anything in the contract for Native hirin<br>How is the pipeline going to benefit the community? Attendee stated that they want to go on record<br>that Minto wants to benefit from Payment In Lieu of Taxes and receive at least \$3 million dollars pe<br>year because the project is going to affect the community. It is going right across the community's<br>hunting grounds. |  |
| 9    | Stakeholder Issue | Why does the project keep using drillers from Anchorage? This Minto section contract really should go to a local company for the bear watch. The policies that the project puts in place right now can be tilted towards Alaskans. The community is frustrated and disappointed.                                                                                                                                                                  |  |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 1    | Stakeholder Issue | When all resource reports are available, send CD's to the Tribal Council and City. Limited internet availability makes looking up on line difficult.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
| 2    | Stakeholder Issue | What is the projected life of the pipeline? With pressure over time how long before it has to be dug<br>up? How will the pipeline hold up in permafrost and earthquakes? What is the pipe made of and what<br>environmental response unit do you have? Is FTA Free Trade Agreement? What non-FTA countries<br>are targeted for market? Is the investor the same thing as the producer? Is that Exxon, Conoco, BP?<br>Which other producers are Alaska LNG's competition? Attendee said, the gas is an Alaskan<br>resource, it is coming from our state, we feel we should gain something more than a dollar. I am<br>hearing you say it is the State of Alaska's responsibility, but do the oil companies consider it a part of<br>their responsibility to extract the resource for the state? |  |  |
| 3    | Stakeholder Issue | How will the state pay for the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| 4    | Stakeholder Issue | Will the project use the Trans Alaska Pipeline System (TAPS) camps and gravel sources?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |
| 5    | Stakeholder Issue | How far is the pipeline from Evansville/Bettles?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |
| 6    | Stakeholder Issue | Will the project own the land along the whole pipeline or will some of it be leased?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
| 7    | Stakeholder Issue | Attendee said they think five interconnection points is conservative. With the five offtake points, is the plan to turn the liquid back to gas? It would be relatively easy for offtakes to be a distributed to the villages in the interior, which saves high-energy cost and fuel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
| 8    | Stakeholder Issue | What kind of employment proposals does the project have for Indigenous Native people? Is it union or non-union, or both? Are there going to be a ton of jobs for heavy equipment operators, welding, and pipefitting?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |
| 9    | Stakeholder Issue | Do they have petroleum engineering classes specifically for the pipeline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |

| 1    | Stakeholder Issue            | Has the project actually ever listened to a public comment and made a change? |  |  |

| 2 | Stakeholder Issue | Regarding the new spaghetti highway map for the Kenai Spur Highway relocation, the letters are confusing. The map has an "A" that goes just north of the project site, and there is an "A" that goes by the lake, and 5 of the 9 sites start with "A". Which route is the project looking at, are you looking closer to the LNG plant, or are you looking at taking the long route? If the route leaves Kenai on Marathon Road, go out through Kenai property to Mental Health Lands, Mental Health Lands to Holt Road, Holt Road, private piece of property, about 4 of them. Go on Alaska Mental Health Lands, and then two pieces of property, that connects to North Miller Loop behind the Lake Road. Then there will be a 5-lane bypass with very little land acquisition. That is where the road should go. There is going to be an open forum, Nikiski Group, for the new City of Nikiski, within a few days so I hope you will all join. |

| 3 | Stakeholder Issue | What is the exit plan if the project fails? Has the project put it together yet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 4 | Stakeholder Issue | I believe, the project is still at the pre-FEED stage, right? For people who have not read the prior report, then the project has to get the regulatory approval, correct? Then it can go on to FEED, depending on the local economy and all the factors, is that correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 5 | Stakeholder Issue | What are the tangible benefits of bringing the LNG to Nikiski, other than the economics? How is it going to benefit residents?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 6 | Stakeholder Issue | Some landowners have been waiting three years to find out if the project is going to buy their land.<br>Landowners need to know what is going on. Is the project going to buy the land? Can the state claim<br>eminent domain on certain people's property? Is there a map of all the properties purchased and<br>what will be purchased in the future?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 7 | Stakeholder Issue | Would it be better for the industries involved to deal with a single unified government entity in Nikiski, rather than a borough entity or government entity, especially contracting people?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 8 | Stakeholder Issue | How deep are the wells that draw water? Once the pumping starts is there going to be constant monitoring of the discharge? How much water is the project planning to use? The last study on the aquifer was in 1969 when Tesoro was here. The project says the cone is only 1,000 feet; the way that aquifers work, if it fractures, it could affect people 3,000 feet away. Is the project going to monitor further than 1,000 and 1,500 feet? What would all that fresh water do to Cook Inlet? When another plant was operating, they pumped Cabin Lake almost completely dry. They pumped down 3½ feet. How long does it take to recover the water? When the plant is operating, will there be any metals or ammonia in the discharge? When the plant is up and running, what are the plans for discharging? Is the project going to release discharge into lagoons, lined catching ponds, or just let it evaporate?                          |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
| 1    | Stakeholder Issue | With \$500 million spent on the project this must mean it is a sure thing. What is the status of the project?                                                                                                                                                                                                                                                                                                                                                                               |  |  |
| 2    | Stakeholder Issue | What field studies were conducted near Allakaket? Who conducted these studies? What studies were conducted north of the community?                                                                                                                                                                                                                                                                                                                                                          |  |  |
| 3    | Stakeholder Issue | This past winter a team conducted surveys of the community members [Allakaket] regarding subsistence resources. There was good participation and about 60 people participated. What impact do the subsistence and cultural resource surveys have on the project? How will subsistence survey information be used and presented? When will Allakaket get a copy of the report?                                                                                                               |  |  |
| 4    | Stakeholder Issue | The community of Allakaket relies on subsistence. Hunters have to travel approximately 200 miles up the Kanuti River for moose, caribou and sheep. Gas costs about \$7.50 per gallon so these hunting trips cost about \$800.00 roundtrip. Moose and caribou are main foods for the community, along with sheefish and white fish. Without subsistence, they cannot afford to live in the area. There is a desire to teach their children the traditional way of life, as well as have them |  |  |

| Item Agenda Item(s) Description |                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |
| 1                               | Stakeholder Issue | How much different is the current presentation from 4 years ago? Where will the gas come from? Will it be dry gas? If the pipeline is going to end in Nikiski, the community needs to get access to the waste energy. Who is going to get access to the waste energy? If we learn nothing else from Valdez, Valdez gives waste energy to the staff. They do that all over the world. It is not a big deal. They have done studies on it. The project will need an access road to build this pipeline and a permanent road to do maintenance work on. Will this access road be a public road? |  |  |  |
| 2                               | Stakeholder Issue | Is the project saying it is less expensive for a ship to come into Nikiski than Port MacKenzie?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |
| 3                               | Stakeholder Issue | There are going to be a lot of people coming to this state and communities' will start building a lot of accommodations for them. The state and the borough better start hiring land planners from southern California and use their expertise to stack people on top of each other.                                                                                                                                                                                                                                                                                                         |  |  |  |
| 4                               | Stakeholder Issue | Attendee stated that they have property on the Parks Highway. Will the line go within 300 feet of the right of way? In some parts of the Parks Highway, there is 100 feet in front of attendee's property.                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |

| Alaska LNG. | MINUTES OF MEETING (MOM) | DCN tbd<br>02-Nov-16<br>REVISION: FINAL |
|-------------|--------------------------|-----------------------------------------|
|             | CONFIDENTIAL             | Page 2 of 2                             |
|             |                          |                                         |

| 5 | Stakeholder Issue | Will there be an offtake line to the villages so they can get inexpensive gas? What is the closest off take point? Does the offtake infrastructure have to be built by the local community if they want to access gas? Where is the nearest offtake to Houston? How much are the offtake plants going to cost? There have never been any offtakes added to the Trans Alaska Pipeline System. It is cost prohibitive. Nobody has been able to afford it. If it is not there when it begins, the cost is astronomical. The closer the offtake is, whether it is on this end or Fairbanks end, it is better for the whole state as far as takeoff points to build them when the pipeline is built. For every mile of offtake we have to build on [Houston] side of the pipeline, the more expensive it is going to be. That is why the offtake point should be built right the first time. We are asking where is our gas, where is our money? Where is that takeoff point for Houston? What kind of revenue is the community going to have, and how is that going to work for us? |
|---|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6 | Stakeholder Issue | Why is this meeting scheduled for 6 o'clock? It does not give people a chance to commute back from work. Also, this is the same venue that the project had before and with the noise it is very difficult to hear. Why does the project not respect significant city meetings? Monday nights are a conflict. I have said this to LNG people before and they should have respect for the comments from the community. How is there supposed to be documentation for what is being communicated here? The noisy rooms are not appropriate without a microphone. The meeting is also conflicting with the city council and the borough meetings. This is not the first time this has happened. How is that recorder supposed to hear when we cannot hear?                                                                                                                                                                                                                                                                                                                          |
| 7 | Stakeholder Issue | What kind of revenue are the community going to have, and how is that going to work for us?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |
| 1    | Stakeholder Issue | Where are the gravel sources for the project? Are the gravel sources outside the park area? What level of pipeline maintenance is involved once the project is complete? Are aircraft involved in the pipeline maintenance operations? Attendee requested renderings of the preferred and alternate routes. Will there be a Rev. C for the Resource Report? Would the gravel pits impact Denali Park?                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |
| 2    | Stakeholder Issue | Which part of the Yanert Valley is the pipeline routed through from Denali Park? Where will the access roads be located and routed for the section of the pipeline routed through the park? Is there a cost faction in the road decision? Which is the preferred and which is the alternate route? Attendee urged that the pipeline follow the highway. Attendee said the project should use the existing utility corridors. Which route does the National Park Service prefer? Is the justification of the pipeline routing through Denali Park also applicable to the Cantwell area? Will the pipeline be routed along the utility corridor to the south of Denali Park? The Denali Borough has a resolution in support of the pipeline being routed through the park |  |  |  |
| 3    | Stakeholder Issue | Where is the project in the project schedule?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |
| 4    | Stakeholder Issue | What is the status of the National Park, State of Alaska and private land ownership in planning of the route through Denali Park? How wide is the easement corridor? If the State of Alaska takes over the project will the state utilize eminent domain to acquire the private lands needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |
| 5    | Stakeholder Issue | Will there be an off-take in the area as a benefit to the park area people? It will be wonderful to have a gas off-take. Who do we lobby for the gas off-take? Is a gas off-take a National Park Service prerogative?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |

| ltem | Item Agenda Item(s) Description |                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| 1    | Stakeholder Issue               | If ownership of the project changes after FERC issues the permits, what happens?                                                                                                                                                                                                                                                                                                                                      |  |  |
| 2    | Stakeholder Issue               | What would the volume of Alaska LNG ship traffic be in Cook Inlet? Has there been consultation with communities about ship traffic?                                                                                                                                                                                                                                                                                   |  |  |
| 3    | Stakeholder Issue               | Chickaloon is not on the Cook Inlet but what happens there affects the community's ability to eat.<br>When the project talks with community councils, is that considered Government to Government<br>Consultation? If commercialization of the North Slope gas is achieved, will Tikahtnu Forum be<br>consulted? If the project waits to fund the FEED stage, the consultation may be irrelevant after five<br>years. |  |  |

| ltem | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| 1    | Stakeholder Issue | How many man camps are proposed and how many people would there be in a man camp? If there was a chance to introduce natural gas to the area [Healy], would it be a separate project and separate contracts? What is the state planning on doing about upgrading the road here in Healy? It is in poor shape from the intersection to here right now. If there is going to be offloading on the railroad tracks the road in Healy is not suitable for lots of truck traffic. What is the project going to do about the bridge? When the school bus goes through the bridge, it is really one-lane. At that point, you just have to wait and let the bus pass through. Something would have to be done about the bridge. Just keep in mind that Cantwell school is here. We are a great little school. If this does become a man camp, it would be great for the community if the workers brought their family. What sort of work is the project doing with the Department of Transportation (DOT) to identify places where road conditions might not be up to the task for a project like this? How is the project going to handle sanitation? Will it be a bunch of porta-pottys? I read something in the Resource Reports that some of the most innovative technologies around water and wastewater treatment are part of the plan. Are there any other gas fields along the route that could be developed in the future? What kind of opposition is in play for this project? How many man camps are proposed and how many people are there in a man camp? Would you bring most of the material up on rail and offload it? How far north and south do you think the construction camps would be in Cantwell? |  |  |

| 2 | Stakeholder Issue | Is there going to be a pipeline? The producers could say, "Hey, we are out of here." With the change<br>in legislature, could they say, "We are no longer interested in this?" Is the project going to make us<br>money, or ten years from now are we going to look at this and go, "What were we thinking?"<br>Contractors and service providers need to know, do we anticipate the project going forward? Do we<br>spend money on hardware, equipment, upgrading our facilities only to have to go back to the banks in<br>3-years because we cannot make the notes? I have been on plenty of smaller federally and state<br>funded projects where we waited all season to get work, and they pulled the plug when we got there. |  |
|---|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 3 | Stakeholder Issue | What would be the earliest Cantwell can expect to see a man camp from the project? What is the duration of the construction period in this area?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 4 | Stakeholder Issue | Has the community been given the fact sheets explaining the difference between interconnection points and offtakes? My question is for AGDC, what are you doing for takeoffs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 5 | Stakeholder Issue | Attendee stated they have no support for the project because it does not leave gas behind for the communities. Absolutely no support, the project comes along and say we are going to have a job in 2-3 years, but when you are gone, there is a big scar and the community does not benefit from the scar. Healy's electric costs are exorbitant. I do not know if it is the highest in the state, but we are up there. It takes a huge chunk out of your check every month.                                                                                                                                                                                                                                                      |  |
| 6 | Stakeholder Issue | Once the work is complete, is there going to be a service access road along the length of the ROW, or would it be revegetated? What is your plan?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |

| ltem         | Agenda Item(s)    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| 1            | Stakeholder Issue | What is the address for the AGCD website? Would the FEED stage occur after the final EIS? Would it be smarter to wait until the EIS is complete before moving into the FEED stage? What diameter around the pipeline are you thinking of clearing? Attendee expressed concern with work done in their backyard; if the pipeline is buried, is the land going to stay clear on top of the pipeline? Will the pipeline be lighted with artificial lighting? |  |  |  |
| 2            | Stakeholder Issue | Now that the State of Alaska is taking over the project will only state money be used? Attendee expressed the belief that the investors would need to be there upfront for a smart project to precede, if there are no investors, why go on to the next \$1.5 billion phase? If the project stalls out because of lack of investment, and the EIS is complete, how long is the EIS good for? Is it 5-years?                                               |  |  |  |

| 3 | Stakeholder Issue | Where are the investors going to come from if the producers do not want to be in the driver's seat? The oil companies will produce all the gas and there will be an understanding for the delivery of the gas. The producers have the largest amount of money to invest in a project. If the producers are not going to be in the driver's seat and take the lead role, and we look atthe State of Alaska and all the projects it has involved itself in; from Mat Maid, to the egg project, to the fishing industry; it has not done well for the residents of this state, so why should the residents of this state believe this is going to be any different? The State's economy is in shambles, and this pipeline is going to do nothing to improve the economy, nothing. As a matter of fact, it is going to hurt the economy more than it does anything. Look at just the economics of the project. When you start looking at the liability of it – the Trans Alaska Pipeline System (TAPS) was built by the producers and the liability is solely the responsibility of the producers. Once the state steps in and takes the leadership role for this project, the liability falls completely on the state, which means residents of the state. It is not an enviable position to be in. Attendee stated that their impression is that either the investors show up and build up interest, or the project dies. So if it takes10 years for financing, it might be too late and the EIS would start over? Will having an EIS attract investors more than where the project is right now? Attendee stated that they are still a proponent of gas for Alaskans. Energy relief for the state is necessary. If you go to Anchorage, it is all subsidized, cheap energy. Fairbanks and the interior are suffering. Interior fuel costs are astronomical. All of a sudden this project has warped from the development of gas for Alaskans to an export gas is going to put money in our pockets is like if you are running a mine and you found you have gold over here and iron over here, and you decide you are going to |  |  |  |

| 4 | Stakeholder Issue | Could you tell us about the project to put the pipeline over the Denali fault and what that would cost?<br>Why didn't the project choose the TAPS route? Wasn't it always intended to have this gasline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
| 5 | Stakeholder Issue | Are those 5 offtakes still part of the price of that \$45 billion?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| 6 | Stakeholder Issue | Regarding the process and sequence of milestones, when Resource Reports 2 and 10 are wrapped up will the project submit an application to the Federal Energy Regulatory Commission (FERC)? Will AGDC submit an application for Alaska LNG for this project? Is the project fully funded to take it from today to the submission of the application to FERC? When is the anticipated submission of the application to FERC? When is the anticipated submission of the application to FERC? When is the anticipated submission of the application to FERC? When is the anticipated submission of the application to FERC? When is the anticipated submission of the application to FERC? What if FERC comes back and says, "These parts of your application need work." Will there be a draft EIS, and a final EIS in 2018 or 2019? There are so many regulatory agencies that have their finger in the project that it becomes almost insurmountable to deal with all of them. The regulations are constantly changing. Last year, congress passed 47 new laws, which is normal for congress in the United States. Last year with all the different regulatory agencies in this country, there were 47,000 new regulations in one year. How in the world can any corporation keep up with all those regulatory changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |
| 7 | Stakeholder Issue | Did you say below the active layer, suggesting parts of the pipeline will be embedded in permafrost?<br>Because here [Healy] the active layer is way less than 3 feet. Is it okay being embedded in<br>permafrost with the gravel around it? How will this project protect permafrost? What will be the<br>impacts of thawing permafrost on the pipeline? We are losing permafrost unrelated to the pipeline.<br>You are going to have a pipeline in permafrost and 10-years later there will no longer be permafrost,<br>at no fault of the pipeline. The engineers need to account for loss of permafrost. They just need to<br>engineer it around the possibility of the ground not staying permafrost because of natural and<br>potential climate changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |
