ATTACHMENT D.1 EXTERNAL CORRESPONDENCE DOCUMENTATION

Alaska Department of Environmental Conservation

ADEC

ExxonMobil Development Company 16945 Northchase Drive, DEV-GP4-498 Houston, Texas 77060 832-624-2816 281-654-3212 Fax Charlie Kominas Alaska LNG Project Environmental, Regulatory and Land Manager

February 25, 2014

Ms. Elizabeth Nakanishi ADEC Air Monitoring Program 619 E. Ship Creek Avenue, Suite 249 Anchorage, AK 99501

Subject: Meteorological and Ambient Air Monitoring Program Site Approval Request, Nikiski

Dear Ms. Nakanishi:

BP, ConocoPhillips, ExxonMobil and TransCanada are currently working together to progress an Alaska LNG project and are developing a multi-year data gathering strategy in order to obtain meteorological and ambient air quality information near the Nikiski industrial area. This prevention of significant deterioration (PSD) quality data collection effort will play a critical role in LNG liquefaction facility siting and design.

The Alaska LNG project requests ADEC concurrence on siting approval for a meteorological tower site as well as an ambient air monitoring station site in Nikiski, Alaska. As confirmed with ADEC Air Monitoring Program staff in a meeting on February 18th, the Alaska LNG project requests ADEC site approval on or before March 15th. The locations described herein are proposed. If parcel locations change significantly from those proposed in this letter, the project will submit an amended site approval request. Final locations will be provided to ADEC.

Meteorological Tower Site Approval

The Alaska LNG project proposes to install a 60 meter meteorological tower with a proposed location identified in Figure 1 (See Appendix A). The project proposes to collect the following meteorological data at this location:

- Horizontal wind speed at 10, 30, and 60 meters
- Vertical wind speed at 30 meters
- Wind direction at 10, 30, and 60 meters
- Temperature at 2, 10, 30, and 60 meters
- Solar Radiation at 2 meters
- Sigma A at 10, 30, and 60 meters
- Sigma W at 30 meters

In identifying the proposed meteorological tower location, the Alaska LNG Team applied guidance provided in the February 2000 EPA publication Meteorological Monitoring Guidance for Regulatory Modeling Applications (EPA-454/R-99-005) with efforts made to maximize representativeness, including the following factors:

- Proximity of the meteorological site to the area of interest for the Alaska LNG project
- Consideration of distance between potential sources and receptors
- Consideration of atmospheric dispersion potential
- Placement of equipment at representative heights, focusing on boundary layer profiling and three dimensional meteorological fields
- Evaluation of terrain effects on meteorological conditions

Terrain relief in Nikiski is minimal, and the project team anticipates that terrain effects on meteorological measurements at the proposed site will be non-significant. While terrain heights are below potential stack-tops, there are vertical obstructions in the vicinity. Figure 2 shows the proposed tower location in relation to nearby obstructions, with polygons indicating estimated 10:1 stand-off distances. Based on an estimated height of 230 feet for the Agrium North "Prill Tower," the proposed Alaska LNG meteorological tower site falls within the EPA recommended distance of at least ten times the height of nearby obstructions. The potential aerodynamic effects due to the Agrium tower are mitigated by three key factors: The tower is well outside the predominant wind direction (See wind rose in Figure 3); the proposed meteorological site is outside the total depth of the building wake, estimated as approximately 2.5 times the height of the obstruction; and, with a separation distance of about 1,800 feet from our proposed meteorological tower location, the Prill Tower's thin character precludes it from having any measurable impact on wind speed or direction. The proposed tower location is also further away from the Agrium tower than an existing ADEC-approved meteorological tower. A representative photograph is shown in Appendix B, Photograph 1.

Information on stand-off distances from the proposed tower site and nearby obstructions is listed in Table 1.

ID	Obstruction Name	Estimated	Is Met Tower
		Obstruction	Site Outside
		Height	10:1
		(feet)	Standoff?
1	Tank 1: Cook Inlet Pipeline	80	Yes
2	Tank 2: Kenai LNG	110	Yes
3	Tank 3: Tesoro Refinery North	80	Yes
4	Tank 4: Tesoro Refinery South	80	Yes
5	Homer Electric Association	90	Yes
6	Kenai LNG	90	Yes
7	Agrium South .	200	Yes
8	Agrium North (Prill Tower)	230	No

Table 1: Evaluation of Obstructions

Ambient Monitoring Station Site Approval

The Alaska LNG project also proposes to install an ambient air monitoring station with co-located, non-PSD quality wind speed and direction equipment approximately 6,500 feet from the meteorological tower site described previously (See Figures 1 and 4). The project will collect data for the following parameters at this proposed monitoring site location:

- Ozone
- NO₂
- SO₂
- CO
- PM-10
- PM-2.5 (co-located)
- Wind speed and direction

In proposing the ambient station location, the project team has taken into consideration the requirements of 40 CFR Part 58, Appendix E. During a meeting with ADEC Air Monitoring Program staff on February 18th, the existing tree line near the proposed ambient station site was questioned. A representative photograph of the tree line southwest of the proposed station site is included in Appendix B. The project proposes to maintain a separation distance of at least 10 meters from the drip line of nearby trees that could otherwise act as obstructions to air flow.

In conclusion, thank you for consideration of this siting approval request. If you have any questions or need additional information regarding this request before March 15th, please contact me at 832-624-2816 or our Environmental, Regulatory, and Land Advisor, Jeff Raun, at 907-929-4105 or jeff.raun@exxxonmobil.com.

Sincerely,

Clean Konto

Charlie Kominas Alaska LNG Environmental, Regulatory and Land Manager For and on behalf of ExxonMobil Alaska Production Inc.

Project No.: TAL-00219236-06

Subject: Quality Assurance Project Plan for the Alaska LNG Project Air Quality and Meteorological Monitoring Program—Nikiski

Dear Ms. Nakanishi:

Exp Energy Services, Inc. (exp) is submitting the enclosed Quality Assurance Project Plan (QAPP) for the Alaska LNG Project Air Quality and Meteorological Monitoring Program—Nikiski. As you are aware, on March 13, 2014, the Alaska Department of Conservation (ADEC) reviewed and conditionally approved the Nikiski Meteorological Monitoring site location and approved the Ambient Monitoring site as described in the ExxonMobil request letter sent on behalf of the Alaska LNG Project, dated February 25, 2014. Subsequently on June 6, 2014, ExxonMobil requested a modification to the conditionally approved Nikiski Meteorological Monitoring site location, which was approved by ADEC on June 13, 2014.

On behalf of the Alaska LNG Project, Exp requests ADEC review and determination whether the described monitoring program satisfies Prevention of Significant Deterioration (PSD) monitoring quality assurance requirements.

Brad,

Thanks for sending the attached explanation. I was not aware of the changes EPA is proposing to the PSD PM2.5 collocation requirements.

ADEC's past comments reflect EPA OAQPS and EPA R10 interpretation of the current 40 CFR Part 58 Appendix B wording, which is: all applicants who use continuous analyzers to measure PM2.5 must adhere to the every third day FRM sampling schedule. The new rationale makes sense to me, but since the changes have not yet been adopted, ADEC does not want to set precedence. Chris Hall at EPA R10 indicated to me that EPA had not heard adverse comments to the change and expects the rule to become final sometime in March or April.

ADEC will accept the 1/6 collocation sampling schedule for AK LNG, assuming that the changes will become rule. Should the changes be stripped out of the final rule, ADEC and EPA would fall back to the old interpretation and require 1-in-3 sampling for the collocated sampler.

Barbara

Barbara,

The Nikiski monitoring project does intend to use a continuous PM2.5 sampler. However we believe that the proposed 6-day sampling schedule for this project meets the PSD monitoring requirements.

The attached document provides the rationale for how the project came to the conclusion that 6day sampling frequency should be acceptable for this project. We would like to discuss this directly with ADEC in a face-to-face meeting or via conference call as soon as something can be coordinated. The project requests that this be resolved quickly because the program has already begun data collection. Please provide me with the list of ADEC participants and their availability and I will arrange a brief meeting to bring this to conclusion. Thank you for your time and consideration.

Brad,

Are you saying AK LNG will not use a continuous PM2.5 analyzer for this project? If you are using a FRM, then the primary FRM needs to sample every 3 days and your collocated sampler every 6<sup>th</sup> day. If you use a continuous analyzer as your primary, the collocated has to operate every 3<sup>rd</sup> day.

I'm not sure what you mean by "daily sampler". You can always use a FRM as the primary sampler, which can sample every third day, or if you want every day. If you elect to run the FRM daily you will also need collocation every 3<sup>rd</sup> day.

Brad Broker would like to open communications regarding their PM2.5 collocated sampling frequency.

Who would be the person to deal with these issues?

~Elizabeth

From: Brad Broker [bbroker@slrconsulting.com] Sent: Tuesday, January 27, 2015 5:47 PM To: Nakanishi, Elizabeth D (DEC) Subject: Re: AK LNG QAPP review

Yes. It is for the PM2.5 collocated sampling frequency.

Thank you for the memo. I thought it might have come from this.

This memo states a 3 day schedule is required for all PSD programs. That statement is not entirely accurate.

40 CFR Part 58, Appendix A, 3.2.5.7 states: "Sample the collocated audit monitor for SLAMS sites on a 12-day schedule; sample PSD sites on a 6-day schedule or every third day for PSD daily monitors."

The AK LNG sampler is not a "daily sampler" (required to run every day by permit or rule) so a 6 day schedule should be appropriate for this project.

Will you please take a look at this and let me know yours and ADECs thoughts?

Thanks. Brad.

Please excuse typos because this was sent from my iPhone (301-2187)

Brad,

Just for clarity's sake, we are discussing the sampling schedule for the PM 2.5 collocated FRM monitoring?

According to ASRC your QAPP submittal specifies a sample every 6 days. ASRC asked if there was any arrangement between ADEC and AKLNG. I sent a query off to the monitoring department and received the attached guidance in which it is stated that PSD requirements require collocated FRM sampling every third day. Please read the attachment for details.

I was informed that there are no arrangements between ADEC and AKLNG to allow 6 day sampling instead of 3 day.

I did not forward this information to you because I was not aware that it was an issue that required clarification. I believed only ASRC had a question as to ADEC requirements. If I missed a query email from AKLNG or yourself I apologize.

I am happy to forward email trails to you if you would like. I will also call you if you desire at a convenient time that you name.

Please tell me if there is any question left unanswered by this communication. I will attempt to find the answers you require.

Respectfully, Elizabeth

Elizabeth,

I just tried to call you but could not get through or leave a message. Could you give me a call when you have a moment? I want to discuss the unresolved finding regarding the PM2.5 collocated sampling.

Basically, is this ASRC's finding and ADEC is awaiting a response from the project before making any sort of determination or does ADEC endorse this finding?

Normally I am used to seeing a little more feedback from ADEC on expectations for next steps.

Brad. 264-6974

DIVISION OF AIR QUALITY Air Monitoring & Quality Assurance Program

> 619 E. Ship Creek Avenue, Suite 249 Anchorage, Alaska 99501 Main: 907.269.7577 Toll free: 866.241.2805 Fax: 907.269.7508

July 29, 2014

## PM<sub>2.5</sub> Precision measurement requirement for Prevention of Significant Deterioration (PSD) sampling projects.

The Alaska Department of Environmental Conservation is providing the following interpretation of the PSD PM<sub>25</sub> sampling requirements for collocated data pairs. For general information regarding the Department's air quality monitoring requirements, see 18 AAC 50.215(a) and <u>http://dec.alaska.gov/air/am/index.htm</u>.

 $PM_{2.5}$  monitoring networks must have a redundant monitor at one or more of the monitoring sites as a data precision check, per 40 CFR 58 Appendix A Section 3.2.5. If the primary sampler at this site is an EPA approved Federal Equivalent Method (FEM) then the collocated sampler has to be an approved EPA Federal Reference Monitor (FRM). If the network is large enough to require more than one collocated site (i.e. more than 7 sites in the network) then 50 % of the collocated monitors shall be FRM samplers and the other 50% shall be FEM samplers having the same method designation as the primary sampler. The collocated FRM sampler shall operate every third day in order to produce <u>about</u> 25 valid sample pairs a year (emphasis added). A sample pair is considered valid if both 24-hour values are above 3 micrograms per cubic meter ( $\mu g/m^3$ ), per 40 CFR 58 Appendix A 4 (c).

The Department recognizes that in rural and remote areas of the state,  $PM_{2.5}$  concentrations are usually low and that the EPA sampling schedule might not produce 25 data pairs with both values meeting the 3  $\mu$ g/m<sup>3</sup> threshold. Therefore the Department considers the PM<sub>2.5</sub> PSD precision requirements met as long as:

- 1. the PM25 data were collected following the EPA sampling frequency, and
- 2. the absolute difference of the PM<sub>2.5</sub> pairs where one or both sample values are below the  $3 \mu g/m^3$  concentration threshold is less than  $3 \mu g/m^3$ .

If an applicant believes an alternative sampling schedule is warranted, the applicant must provide a detailed description of and justification for the proposed alternate sampling schedule in the project specific Quality Assurance Project Plan (QAPP). Department approval will be required *prior to* collecting data under an alternative schedule.

Barbara Trost Program Manager

The Alaska LNG Project respectfully disagrees with the finding statement provided in ADEC Ambient Air and/or Meteorological Monitoring Quality Assurance Project Plan (QAPP) Review Checklist, section A7 provided by ASRC Energy Services. The disputed finding states: *"PSD rules for PM<sub>2.5</sub> require every third day sampling for the collocated sampler."* In actuality, 40 CFR Part 58, Appendix A, 3.2.5.7 states: *"Sample the collocated audit monitor for SLAMS sites on a 12-day schedule; sample PSD sites on a 6-day schedule or every third day for PSD daily monitors."* 

The use of the term "daily monitor" has a history of confusion because the term "daily monitor" is currently not defined in 40 CFR. While one interpretation of the term "daily monitor" could refer to any sampler that collects a  $PM_{2.5}$  concentration on a daily basis, and therefore requires collocation on a 3-day schedule, an alternate interpretation could equally be deduced. The term "daily monitor" only appears in the above citation and in 40 CFR 58.12 sections ii and iii where it is used to describe the increased frequency of  $PM_{2.5}$  sampling that becomes required if ambient concentrations are known or expected to be near the NAAQS. Therefore, it could be concluded that the term "daily monitor" refers to these  $PM_{2.5}$  samplers that are required to operate on a daily basis and therefore that is the scenario that triggers 3-day collocated sampling.

EPA clarified their intent for PSD collocation sampling frequency requirements recently stating: "Sample the collocated quality control monitor on a 6-day schedule for sites <u>not requiring daily monitoring</u> and on a 3-day schedule for any site requiring daily monitoring (underlined emphasis added)."<sup>1</sup> The Alaska LNG Project recognizes that this clarification is a non-binding proposed change to the ambient air quality monitoring requirements however it does provide insight into EPA's intent for PSD collocated sampling requirements. This stated intent is consistent with the second interpretation that the term "daily monitor" refers to samplers that are required to operate on a daily basis and clearly not referring to all samplers that voluntarily provide data on a daily basis such as that proposed for the Alaska LNG project.

The project is aware of a July 29, 2014 policy memo (published after the project's QAPP submittal on June 29, 2014) from the Alaska Department of Environmental Conservation (ADEC) where the finding statement provided to the Alaska LNG project requires a 3-day sampling schedule for its PSD monitoring.<sup>2</sup> We believe the memo's main intent is to provide guidance on how to demonstrate compliance with 40 CFR 58, Appendix A, 3.2.5 PM<sub>2.5</sub> precision evaluations when ambient air PM<sub>2.5</sub> concentrations are below minimum concentrations necessary for valid measurement precision comparisons (< 3 µg/m<sup>3</sup>). The ADEC memo accurately indicates (and we agree) that the overall goal specified in 40 CFR 58, Appendix A, 3.2.5.7 is to produce <u>about</u> 25 data pairs for evaluation of PM<sub>2.5</sub> precision statistics. However, we do not agree with the statement in the memo that a 3-day schedule should be mandated for all PSD monitoring projects.

The EPA 1 in 6 sampling frequency schedule proposed by the Alaska LNG project is designed to collect about 60 sample pairs per year. This should be sufficient to satisfy the requirement to collect 25 pairs for precision evaluation because of expected  $PM_{2.5}$  impacts from a significant local population and industrial influences near the station. If the Alaska LNG monitoring program does not collect 25 pairs meeting minimum concentration levels, this is not a critical flaw in the monitoring program. In this scenario, the procedure described in the ADEC memo is applicable because the 1 in 6 sampling schedule is "the EPA sampling frequency" applicable for the program (criteria 1 in the ADEC memo); and an acceptable absolute difference less than 3  $\mu$ g/m<sup>3</sup> would define acceptable performance (criteria 2 in the ADEC memo).

#### Re: Alaska LNG air quality modeling approach

Dear Alan

The Alaska LNG Project plans to construct several stationary sources of air emissions as part of its plan to construct an integrated project with Interdependent facilities for the purpose of liquefying natural gas for export and opportunity for in-state delivery. As the lead agency for the National Environmental Policy Act (NEPA) Environmental Impact Statement (EIS) for Alaska LNG, the Federal Energy Regulatory Commission (FERC) has initiated a pre-filing process that precedes the commencement of the EIS process. As part of pre-filing, Alaska LNG is required to submit a series of draft Resource Reports. FERC issued a number of comments to Alaska LNG following its review of the Draft 1 Resource Reports, some of which are required to be addressed before the submittal of the Draft 2 reports. One such comment relates to Resource Report 9 (Air and Noise Quality), as follows.

"Include results of consultations with the Alaska Department of Environmental Conservation (ADEC) and the U.S. Environmental Protection Agency concerning the availability of ambient monitoring data and that a complete and adequate air quality impact analysis can be accomplished with the available data, or if additional preconstruction ambient air monitoring would be required. If preconstruction monitoring is required, include a rationale for station siting and a schedule for preconstruction air quality and meteorological data collection, approval by the ADEC, and completion of the modeling analyses at the GTP and Liquefaction Facility. Include a contingency plan for any incomplete collection of data in this process (e.g., fill in data gaps with other monitoring datasets). This information is being requested prior to the next draft of resource reports to ensure that the appropriate data are available for analysis during the next round of review." Except from FERC letter to Alaska LNG; May 15, 2015.

To address the request from FERC, Alaska LNG has prepared a proposed modeling approach, which identifies proposed source data and applicable modeling tools for each stationary source proposed to be constructed as part of the Alaska LNG Project. The approach addresses the modeling and air quality-related analyses that would be required to support review of the project under NEPA.

We are seeking ADEC's feedback on the enclosed modeling approach in writing, specifically to identify any inconsistencies that could be related to air permitting under ADEC regulations, to be able to provide FERC written evidence of ADEC's feedback in response to the above referenced comment.

To assist with meeting FERC's request by Aug 1 2015, the Alaska LNG Project requests agency comments by July 15 2015. We appreciate your assistance with this matter.

Please contact our Environmental Impact Statement Advisor, Norman Scott, at 907-929-4129 or by e-mail at norm.scott@exxonmobil.com if you have any questions.

Sincerely,

ea man Karen Wuestenfeld

Karen Wuestenfeld EIS Lead Alaska LNG Project 3201 C Street, Suite 506 Anchorage, AK 99503

Subject: Alaska LNG's Air Quality Modeling Approach

Dear Ms. Wuestenfeld:

The Alaska Department of Environmental Conservation (ADEC) reviewed Alaska LNG's June 2015 Modeling Approach for Federal Conservation Units Memorandum, as requested in your July 1, 2015 letter to me. Our comments are enclosed, along with the following background statement, clarifications and highlights.

Alaska LNG stated they prepared the modeling approach to address a request from the Federal Energy Regulatory Commission (FERC) regarding the air quality assessments that Alaska LNG will conduct under the National Environmental Policy Act (NEPA). Alaska LNG asked ADEC to, "identify any inconsistencies that could be related to air permitting under ADEC regulations." Alaska LNG also noted that FERC's primary focus regarded "the availability of ambient monitoring data and that a complete and adequate air quality impact analysis can be accomplished with the available data, or if additional preconstruction ambient air monitoring would be required."

We have previously discussed some of our comments with Alaska LNG staff or their consultants. However, we are reiterating those comments in order to provide a formal record, and to also provide FERC with the same information. We are also highlighting the following.

- ADEC assessed the data needs from a permitting perspective. We further note that the ambient demonstrations required of a permit applicant are generally determined by project classification rather than ADEC discretion. Since the assessments conducted under NEPA are generally at the reviewing agency's discretion, there may be some ambient demonstrations conducted under NEPA that would not be needed, nor used, to meet the permitting requirements.
  - ADEC is not commenting on the datasets or procedures for NEPA-only demonstrations. For example, there is no regulatory provision regarding "Sensitive Class II Areas" in ADEC's air quality program. We treat all Class II areas the same – we do not require "Sensitive Class II Area" assessments as part of a Prevention of Significant Deterioration (PSD) permit application or a minor permit application. Therefore, we are unable to address the adequacy of Alaska

Karen Wuestenfeld Alaska LNG

July 14, 2015 Alaska LNG's Air Quality Modeling Approach

LNG's modeling approach for identifying the "sensitive" Class II areas of concern or for providing a federally-acceptable "Sensitive Class II Area" analysis.

- The enclosed comments are based on Alaska LNG's assessment of the required air permit (if any) that
  may be required for each stationary source. Alaska LNG's preliminary assessments seem reasonable.
  However, we will not be able to confirm these project classifications until Alaska LNG provides
  equipment-specific emissions calculations, which is probably not yet available.
- ADEC does not require minor new source review (NSR) permit applicants to collect pre-construction
  ambient pollutant data to supplement their modeling analysis, although they are free to do so. ADEC
  has always worked with minor permit applicants to find surrogate data sets when local pollutant data is
  not available. Minor permit applicants may, however, need to collect at least 12-months of site-specific meteorological
  data if there is no existing data that adequately represents the plane transport conditions at the project site.

Alaska LNG is proposing an alternative approach where they use the U.S. Environmental Protection Agency's (EPA's) MAKEMET program to generate screening-level meteorological data. This can be a viable approach for some projects. However, ADEC suspects that Alaska LNG will need to use sitespecific meteorological data for the Compressor Station (CS) 4 modeling analysis. ADEC also encourages Alaska LNG to evaluate whether screening-level modeling assessments for the other compressor stations provide an adequate margin of compliance to accommodate the range of design changes that could occur during the detailed engineering phase. If not, Alaska LNG should obtain sitespecific meteorological data so that they can conduct refined near-field modeling assessments if needed. A refined modeling analysis would require at least 12 consecutive months of PSD-quality meteorological data to meet ADEC's permit application requirements.

If you have any questions or need more information regarding our comments, please do not hesitate to contact me at (623) 271-9028 or at <u>alan.schuler@alaska.gov</u>.

Sincerely,

an E. hhul

## Re: Meteorological Monitoring Site Amendment Request, Gas Treatment Plant, Deadhorse, Alaska

Dear Ms. Nakanishi:

On July 17, 2015 ExxonMobil Alaska LNG LLC (EMALL) requested siting approval for a 60meter tall Prevention of Significant Deterioration (PSD) quality meteorological tower in Deadhorse, Alaska in support of the Alaska LNG Project (the Project). ADEC conditionally approved the tower siting request on August 17, 2015. An onsite disturbance was encountered during the tower installation work that caused the Project to abandon the original ADECapproved site and identify an alternate location. An alternate nearby location was identified and EMALL requests ADEC siting approval for the alternate location described below. A statement of approval by October 31, 2015 would be appreciated.

A separate Quality Assurance Project Plan (QAPP) will be submitted to ADEC prior to initiating monitoring. Wind speed / wind direction monitoring equipment will be installed on an elevator system on the northeastern side of the tower to ensure it is exposed to the predominant wind conditions without obstruction. The meteorological data to be collected remains unchanged and will include PSD-quality measurments for the following:

- Horizontal wind speed at 10, 30, and 60 meters.
- Wind direction at 10, 30, and 60 meters.
- Sigma Theta (Θ) at 10, 30, and 60 meters.
- Vertical wind speed at 30 meters.
- Sigma Omega (ω) at 30 meters.
- Temperature at 2, 10, 30, and 60 meters.
- Delta temperature (10 m 2m).
- Solar radiation at 2 meters.
- Barometric pressure at 2 meters.
- Relative humidity at 2 meters.

The proposed alternate tower location is approximately 187 meters (616 feet) to the northnortheast from the location prevously appproved by ADEC. Figure 1 of Attachment A shows the location of the 60m Meteorological tower with respect to the general area. Figure 2 shows a comparison between the ADEC-approved location and the new alernate location.

The location's longitude / latitude are: 70° 13.997'N 148° 22.377'W, the site elevation is approximately 55 feet above sea level. Figure 3 shows the proposed tower location in relation to nearby obstructions. Similar to the original location that was approved by ADEC, there remains two potential vertical obstructions in the vicinity, a GCI Communications Tower and an Alaska Telecom Communications Tower. These obstructions are believed to pose minimal aerodynamic effects for the following reasons:

- While the alternate location is slightly closer to the existing GCI Communications Tower, its location is well outside the predomominant wind directions (see the wind rose on Figure 2).
- The proposed site is outside the total depth of the building wake, estimated at 2.5 times the height of the obstruction.
- With a separation distance of almost 400 meters from the proposed location, the thin character of the Alaska Telecom Communications tower's open-lattice construction precludes it from having any measurable impact on wind speed or wind direction should winds originate from that relative direction.

Re: Annual Data Report for the Alaska LNG Project Ambient Air Quality and Meteorological Monitoring Program — Nikiski, Revision 0

Dear Ms. Nakanishi:

Enclosed please find the Annual Data Report for the Alaska LNG Project Ambient Air Quality and Meteorological Monitoring Program – Nikiski, Revision 0. The report summarizes the data observed at the Alaska LNG Project Nikiski Background Ambient Air Quality monitoring station and the Nikiski 60-meter meteorological monitoring station from January 1, 2015, through December 31, 2015. The Alaska LNG Project requests Alaska Department of Environmental Conservation (ADEC) review and verification that the submitted data meets Prevention of Significant Deterioration (PSD) quality criteria.

Monitoring was conducted according to the procedures described in the Quality Assurance Project Plan (QAPP) for the Alaska LNG Project Air Quality and Meteorological Monitoring Program – Nikiski, Revision 3, approved by ADEC on April 20, 2015 unless indicated as a QAPP Variation in the report. All reported data was determined to be valid and meeting PSD-quality objectives. PM<sub>2.5</sub> PSD-quality objectives were considered satisfied despite collecting only 18 valid PM<sub>2.5</sub> collocated "precision" sample pairs as explained in the report.

Please direct all correspondence or questions regarding this submittal to myself at (907) 264-6974 or <u>bbroker@slrconsulting.com</u>. For general Alaska LNG project questions, please contact Jeff Raun at (907) 929-4105.

Elizabeth,

The attached document provides a response to the list of issues that are identified below. Necessary revisions to the referenced tables and calibration records are also included.

As indicated previously, once ADEC and the review contractor validate the revisions as acceptable and confirm no additional comments are identified they will be merged into the report and a final, complete revised report will be re-submitted.

Thank you for the opportunity to address these issues.

Brad

#### Re: Letter to ADEC - Review of Nikiski Capital Dredge Material Characterization SAP

Dear Mr. Rypkema:

ExxonMobil Alaska LNG LLC (EMALL) on behalf of the Alaska LNG Project (Project) is requesting your review of the revised Sampling and Analysis Plan (SAP) for the Alaska LNG Project sediment sampling program at Nikiski to support future evaluation and permitting of potential capital (construction) dredging in Cook Inlet.

We would greatly appreciate feedback on the SAP by July 29<sup>th</sup> if possible so that we can incorporate any modifications and plan potential future work programs.

We appreciate and thank you for your cooperation. If you have any questions about the enclosed plan, please contact Jeff Raun at 907-929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

PEBrukum

#### Wes,

The Alaska Department of Fish and Game (ADF&G) has reviewed the Alaska LNG 2014 Stream Fish Investigations Field Study Protocols (USAKE-UR-SPFLD-00-0010). The 2014 protocols are essentially the same as those used in previous gas line-related stream sampling efforts. The ADF&G has issued a 2014 Fish Resource Permit for handling fish associated with stream field surveys designed to characterize fish presence and fish habitat along the proposed gas pipeline route. The issuance of Fish Resource Permits generally indicates the approval by the Department of the proposed sampling objectives and techniques.

The ADF&G believes the sampling protocols are generally adequate for characterizing fish habitat and fish presence along the proposed pipeline right-of-way. The ADF&G will review the results of the sampling and along with published and unpublished information, and best professional judgment, determine if the streams are properly characterized for permitting purposes.

Jack

From: Cornelison, Wes [malito:wes.cornelison@urs.com] Sent: Wednesday, June 11, 2014 1:10 PM To: Winters, Jack F (DFG) Subject: Alaska LNG Fish Survey Protocols

Hi Jack. Thanks for taking the time today to meet with us today. Believe it or not we are one step closer to getting a gas line for state.

I have attached our Stream Fish Investigations Protocols for your review. As previously mentioned, these protocols have been applied for all Project stream investigations since 2010 (Alaska Pipeline Project and the Alaska LNG Project). The primary objective of this program is to characterize fish presence and habitat in defined stream reaches that fall within the Project footprint. Please let me know via email if you deem these protocols sufficient to achieve this objective.

Best-

### Re: Review of Fish Studies Data Gathered by the Alaska Pipeline Project and the Alaska LNG Project

Dear Mr. Bates:

On behalf of the Alaska LNG Project (Project), this letter and its attachments seek your concurrence regarding data to be used in the regulatory approval process for the Project. As discussed in previous meetings with the Alaska Department of Fish and Game (ADF&G), a considerable body of work has been compiled for portions of the Project footprint north of Livengood, Alaska, including data that is common to a previous gas project (Alaska Pipeline Project). The available body of work includes information gathered by the previous project, as well as information gathered during supplemental surveys conducted by the Project in 2013.

Some of the previously gathered data are no longer applicable or within the proposed Alaska LNG Project footprint; therefore the Project has developed and enclosed the following: an overview of the Stream Fish Survey Program to explain program objectives and summarize study results (Attachment A); a table summarizing potential stream crossings by the current preferred Alaska LNG Mainline Pipeline Route and the Point Thomson Pipeline Route and associated data for each crossing (Attachment B); and two mapbooks (one for the Mainline Pipeline and one for the Point Thomson Pipeline) illustrating the locations of all potential stream crossings (Attachment C).

The Project requests ADF&G's review and endorsement of this data set so that it may be used in the upcoming Federal Energy Regulatory Commission application and resulting Enivronmental Impact Statement. If you have any questions or require further information, please contact Adrienne Rosecrans at (832) 624-2722.

Sincerely,

Bredy (1)

#### Re: Alaska LNG Project Selects Lead Terminal Location

Dear

Over the past year our four companies, ExxonMobil, ConocoPhillips, BP and TransCanada, have worked diligently to advance our understanding of what is required to make an LNG export project possible in Alaska. From production and gas treatment to the pipeline and the liquefaction and storage facilities, this undertaking represents a world-class project with unprecedented challenges. Earlier this year we completed our concept selection process, during which time we reviewed technical work and agreed on a project concept.

Currently, the companies are continuing to refine the agreed project concept that includes a gas treatment plant located on the North Slope, an 800-mile, 42-inch diameter pipeline with up to eight compression stations and at least five off-take points for in-state gas delivery, and a liquefaction plant and terminal. The Alaska LNG project team is preparing for more detailed engineering and design work, consistent with previously released plan phases.

After evaluating more than 20 locations, the Alaska LNG Project team has identified a primarily industrial area near Nikiski as the lead site for the liquefaction plant and marine terminal. We continue to consider secondary sites in Southcentral Alaska. The Nikiski site results in a pipeline route that provides an access opportunity to North Slope natural gas by the major population centers in Fairbanks, Mat-Su Valley, Anchorage and Kenai.

Please find attached a courtesy copy of a press release that was recently issued. We will continue to provide updates to you as our efforts progress. In the meantime if you have questions or concerns about the project, please contact me at (907) 564-3622 or Michael Nelson at (907) 929-4116.

Best regards,

Hyre

# Alaska LNG

Alaska LNG Project 3201 C Street Suite 506 Anchorage, AK 99503

#### Ref No.: LT-AKE-PT-14-0101-001

October 23, 2014

#### RE: Alaska LNG Project FERC Docket No.: PF14-21-000

#### Dear

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (together, Project Participants) have initiated the Federal Energy Regulatory Commission's ("FERC" or "Commission") pre-filing review process for the Alaska LNG Project (Project) under 18 C.F.R. Section 157.21 of the FERC regulations. On September 12, 2014, the Director of the Office of Energy Projects ("OEP") issued a letter order granting the Project Participants' pre-filing request and assigning the Project FERC Docket No. PF14-21-000. Project Participants plan to prepare and file an application for authorization under Section 3 of the Natural Gas Act to site, construct and operate the Project.

### Alaska LNG Project Overview

The Alaska LNG Project Participants are proposing to construct one integrated liquefied natural gas (LNG) project with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular the Point Thomson Unit and Prudhoe Bay Unit production fields on the Alaska North Slope for export in foreign commerce. The proposed project includes the construction of a liquefaction facility in south central Alaska, an approximately 800-mile mainline gas pipeline, a gas treatment plant on the North Slope, and gas transmission lines connecting the gas treatment plant to the Point Thomson Unit and Prudhoe Bay Unit fields. The mainline gas pipeline will include at least five off-take points to allow for the opportunity for future in-state deliveries of natural gas.

Enclosed with this letter are a general project map and a project overview diagram reflecting the proposed facilities and their planned locations. Additional information on the project can be found at <u>www.ak-lng.com</u>.

FERC authorizations are required to construct and operate these facilities. The Alaska LNG Project Participants are targeting to file a formal application for the Project with the FERC in September 2016. FERC authorizations for the project and commencement of construction are

anticipated in the 2018 – 2019 timeframe. Pursuant to this schedule, facilities would begin operating in the 2024 – 2025 timeframe.

Proposed facilities will be located in the North Slope Borough, Yukon-Koyukuk Census Area, Fairbanks North Star Borough, southeast Fairbanks Census Area, and the Kenai Peninsula Borough.

#### FERC Pre-filing Process

Project Participants are currently gathering information about cultural resources in preparation for submitting an application to the FERC, pursuant to the Commission's regulations at 18 Code of Federal Regulations (CFR) Part 380.12(f) and recommendations in the FERC's Office of Energy Projects' *Guidelines for Reporting on Cultural Resources Investigations for Pipeline Projects*. In accordance with the Advisory Council on Historic Preservation (ACHP) regulations for implementing Section 106 of the National Historic Preservation Act (NHPA; 16 USC § 470 as amended), provided in 36 CFR Part 800.2(a)(3), applicants and their consultants may prepare information, analyses, and recommendations for use by the agency. However, the agency remains responsible for making final determinations.

Project Participants do not represent the FERC in terms of government-to-government consultations with Alaska Native Tribes. The FERC has an established policy for consulting with Alaska Native Tribes, articulated in Order 635, *Policy Statement on Consultations with Indian Tribes in Commission Proceedings* issued July 23, 2003. The FERC will initiate direct consultations with Tribes when it issues its Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS). If you would like to communicate directly with the FERC natural gas archaeological staff to discuss its cultural resource review and consultation processes, please feel free to contact Paul Friedman, Senior Technical Expert in Cultural Resources, at 202-502-8059 (email: paul.friedman@ferc.gov).

The purpose of this letter is to request your assistance in the identification of archaeological sites or Traditional Cultural Properties important to the Tribe that may be affected by the proposed Project. Cultural resources data will be included in Resource Report 4 of the overall Environmental Report that would form part of the application. By including information provided by the tribes in our application, FERC can better evaluate any potential impacts on known sites and propose avoidance or mitigation measures during its review. Any information you provide about potential sites would be treated in a confidential manner, as FERC's regulations and guidelines require that cultural resources data be filed as Privileged.

If you have any questions, please contact me at 832-624-2816 or by email at Charlie.kominas@exxonmobil.com. Thank you in advance for your response to this letter.

Sincerely,

Charlie Kominas On Behalf of Alaska LNG Project Participants

cc: Lori Boros, FERC Jim Martin, FERC Judith Bittner, Alaska Office of History and Archaeology Dr. Robert King, BLM State Archaeologist Project file

|                | <ul> <li>Native Village of Steven's Village</li> </ul>    |                                                                                                                                                                             |
| September 21   | Allakaket Village                                         | Indicated the tribe would be having a council meeting and sharing the information                                                                                           |
| September 21   | Native Village of Evansville                              | Stated the pipeline corridor is their neighbor and they have already                                                                                                        |
|                |                                                           |                                                                                                                                                                             |
| september 22   | Kenaltze Inglan i ribe                                    | kesponded with MS. Brenda Treton as the point of contact for future<br>Section 106 correspondence.                                                                          |
| September 23   | Native Village of Eklutna                                 | Responded they did not have enough information to provide comments.                                                                                                         |
| September 24   | Ninilchik Traditional Council                             | Emailed to indicate they did not have any need for tribal consultation at this                                                                                              |
|                |                                                           | time.                                                                                                                                                                       |
| September 24   | Salamantof Native Association Inc.                        | Responded that Chris Monfor is the President and point of contact, they are<br>supportive of the Alaska LNG project and do not request tribal consultation<br>at this time. |
| September 22   | Native Village of Nenana                                  | Indicated they have set up a FERC meeting on October 16, 2015 in                                                                                                            |
|                |                                                           | Anchorage.                                                                                                                                                                  |

# Alaska LNG

Alaska LNG Project 3201 C Street Suite 506 Anchorage, AK 99503

April 14, 2015

Dear

The Alaska LNG project would like to provide you with a brief update on upcoming project planning, outreach and study activities that may touch subsidiaries and shareholders from your Corporation. As we've discussed in recent meetings, the project is in the pre-FEED phase to progress required permits and mature the design of the liquefaction plant, marine terminal, pipeline, and gas treatment plant to connect the Prudhoe Bay and Point Thomson gas resources to export and in-state markets.

A key element of this initial planning phase is to better understand the capacity within Alaska to support the design and construction of such a large and complex project. Two critical areas we're working over the next several months are project logistics and construction labor resources.

The project logistics study evaluates the project's broad infrastructure requirements, including:

- Material logistics supplier capacities (storage warehouses and laydown yards, fuel supply)
- Aviation operators and support capabilities (airfreight, air charters, helicopters, fixed wing)
- Logistics infrastructure and routes (ice road construction, maintenance and support)
- Transportation (Trucking, barging, rail)
- Key support ports
- People logistics management (camp management, personnel travel coordination, camp catering, housekeeping)

PRL Inc., based in Kenai, has been contracted to support this logistics study and will be reaching out to logistics companies, transportation suppliers, and other businesses in Alaska over the coming months. These contacts will include discussions with all of the Alaska Native

regional and village corporations, so we wanted to ensure you were aware PRL was completing this work on behalf of the project.

Concurrently, the project labor study will develop a database and sourcing strategy for Alaska LNG's construction and operation phase. The study will involve a combination of desktop research and direct interface with key stakeholders to obtain input on current and forecasted labor availability. The initial phase of the study focuses on construction-related craft labor directly working the Alaska LNG project as well as support industries. Some examples of required skills include: pipefitters, welders, ironworkers, carpenters, scaffolders, cement finishers, sheet metal workers, boilermakers, equipment operators, truck drivers, electricians, instrument technicians, insulators, and more. The labor study will define gaps between supply and demand and develop strategies to address these gaps including in-state workforce development initiatives, training programs/facilities, apprenticeship opportunities and other initiatives.

We would like to request your support for both studies. In addition to your organization, the project will also reach out to labor unions, state government officials, industry groups and others. We know your perspectives are particularly important and we look forward to working together to advance Alaska LNG.

As a final item, the project's contracting team will be hosting business information sessions to provide Alaska's business community with a project update and information about basic procurement eligibility criteria, standards and expectations. The objective of these sessions is to build collaboration between the Alaska LNG project and Alaska's business community as we progress the project. More information about these meetings is on our website (ak-Ing.com) and sessions will be held as follows:

- April 27, 2015 (Anchorage)
- April 28, 2015 (Fairbanks)
- April 29, 2015 (Kenai)
- May 1, 2015 (Barrow)

I look forward to discussing these initiatives with you further over the coming months and would greatly appreciate the opportunity to meet with you in person sometime in the near future. In the meantime, please do not hesitate to contact me (832-624-3240) or Alaska LNG's External Affairs Manager, Kim Fox (907-564-3628), if you have any questions or would like to discuss the project in any way.

Yours sincerely,

the Right

Steve Butt Senior Project Manager, Alaska LNG Project

Dear Martha,

I am following up on the attached letter which was sent out in October 2014 initiating informal Section 106 cultural resources consultation to your previous tribal council president. The letter was addressed to Bernice Kaigelak. The Alaska LNG is currently gathering information about cultural resources in preparation for submitting the project application to the Federal Energy Regulatory Commission (FERC) in the third quarter of 2016. As the program continues to develop, we will have further discussions with the Native Village of Nuiqsut regarding archaeological sites and sites of cultural importance, with the objective to avoid or minimize impacts to these resources.

In addition, the FERC sent out letters to initiate government-to-government consultation on May 20, 2015. This letter requested input on the environmental impacts associated with construction and operation of the Alaska LNG project. If you wish to participate in a government to government consultation, please contact FERC at your earliest convenience. The Alaska LNG looks forward to continued dialogue with you as the Project progresses.

FERC Contact Information: Eric Howard Phone: (202) 502-6263 Email: eric.howard@ferc.gov

If you have any questions, please don't hesitate to contact me.

Regards,

#### Rosetta Alcantra, President E3 Environmental, LLC 219 E. International Airport Rd., Suite 100, Anchorage, AK 99518

Thomas,

Thank you for taking my call yesterday regarding the Alaska LNG. As you know, I am following up on the attached letter which was sent out in October 2014 initiating informal Section 106 cultural resources consultation. Although the attachment is a form letter, I understand the original was addressed to you. The Alaska LNG is currently gathering information about cultural resources in preparation for submitting the project application to the Federal Energy Regulatory Commission (FERC) in the third quarter of 2016. As the program continues to develop, we will have further discussions with the Native Village of Barrow Inupiat Traditional Government regarding archaeological sites and sites of cultural importance, with the objective to avoid or minimize impacts to these resources.

In addition, the FERC sent out letters to initiate government-to-government consultation on May 20, 2015. This letter requested input on the environmental impacts associated with construction and operation of the Alaska LNG project. If you wish to participate in a government to government consultation, please contact FERC at your earliest convenience. The Alaska LNG looks forward to continued dialogue with you as the Project progresses.

FERC Contact Information: Sric Howard Phone: (202) 502-6263 Email: eric.howard@ferc.gov

Again, thank you for taking my call and please don't hesitate to contact me if you have questions.

Regards,

Rosetta Alcantra, President E3 Environmental, LLC 219 E. International Airport Rd., Suite 100, Anchorage, AK 99518 Ph: 907.565.4200 Mobile: 907.354.3769 Email: ralcantra@E3Alaska.com

Marc,

Thanks for discussing the option of having a meeting with me yesterday. I appreciate your comments regarding the lack of detailed information and that at this time you don't feel like there is enough information to respond to. I will keep you informed about future meetings happening in the Anchorage area as the project moves forward.

Have a great rest of the week and thanks again, it is always a pleasure to talk to you.

Regards,

Rosetta

From: Marc Lamoreaux [mailto:nve.ledirector@eklutna-nsn.gov] Sent: Tuesday, September 22, 2015 4:19 PM To: Rosetta Alcantra <<u>ralcantra@E3Alaska.com</u>> Cc: 'Marlene' <<u>administrator@eklutna-nsn.gov</u>>; 'Maria Coleman' <<u>maria@like-the-wind.com</u>> Subject: RE: Alaska LNG Informal Section 106 letter

Rosetta,

We need more information. Can you send or direct me to more detailed maps of the preferred and optional routes below Talkeetna? When should we expect an environmental impact statement to review, and possibly comment on? And, information on strategies to advocate for more jobs for tribal members? Thanks, Marc

Rosetta Alcantra <ralcantra@E3Alaska.com> Wednesday, September 23, 2015 9:23 AM Brenda Trefon 092315\_Kenaitze Indian Tribe Informal Section 106 letter Project Map & Overview.pdf; Form Letter.pdf

Brenda,

Thank you for responding to my email regarding the Alaska LNG and the letter that was sent out last October. I have attached letter and the project map and overview. The letter was addressed to Rosie Tepp from the information I have. The Alaska LNG is currently gathering information about cultural resources in preparation for submitting the project application to the Federal Energy Regulatory Commission (FERC) in the third quarter of 2016. As the program continues to develop, they would like to have further discussions with the Kenaitze Indian Tribe regarding archaeological sites and sites of cultural importance, with the objective to avoid or minimize impacts to these resources.

In addition, the FERC sent out letters to initiate government-to-government consultation on May 20, 2015. This letter requested input on the environmental impacts associated with construction and operation of the Alaska LNG project. If you wish to participate in a government to government consultation, please contact FERC at your earliest convenience. The Alaska LNG looks forward to continued dialogue with you as the Project progresses.

FERC Contact Information: Eric Howard Phone: (202) 502-6263 Email: <u>eric.howard@ferc.gov</u>

Again, thank you for the follow up and please don't hesitate to contact me if you have questions.

Regards,

Rosetta

Thanks Rosetta. Can you send the 106 letter to me? Also, if you send an e-mail and let me know there is a letter going out, or just send a copy by e-mail, I can let you know it was received. I always try to answer my e-mail, so if you don't near back, please try it again. For now, I can attend any 106 meetings or follow up to send a response from the tribe.

Thanks for keeping in touch,

From:Rosetta Alcantra <ralcantra@E3Alaska.com>Sent:Thursday, September 24, 2015 1:29 PMTo:doreen.lampe@inupiatgov.comSubject:092415\_DLampe\_ICAS\_Alaska LNG Informal Section 106 follow upAttachments:Project Map & Overview.pdf; Form Letter.pdf

Dear Ms. Lampe,

I am following up on the attached letter which was sent out in October 2014 initiating informal Section 106 cultural resources consultation. Although the attachment is a form letter, I understand the original was addressed to your president, Mr. George Olemaun. The Alaska LNG is currently gathering information about cultural resources in preparation for submitting the project application to the Federal Energy Regulatory Commission (FERC) in the third quarter of 2016. As the program continues to develop, we will have further discussions with the Inupiat Community of the Arctic Slope.

In addition, the FERC sent out letters to initiate government-to-government consultation on May 20, 2015. This letter requested input on the environmental impacts associated with construction and operation of the Alaska LNG project. If you wish to participate in a government to government consultation, please contact FERC at your earliest convenience. The Alaska LNG looks forward to continued dialogue with you as the Project progresses.

FERC Contact Information: Eric Howard Phone: (202) 502-6263 Email: <u>eric.howard@ferc.gov</u>

Please o not hesitate to contact me if you have questions.

Regards,

Rosetta Alcantra, President E3 Environmental, LLC 219 E. International Airport Rd., Suite 100, Anchorage, AK 99518 Ph: 907.565.4200 Mobile: 907.354.3769 Email: ralcantra@E3Alaska.com

Dear Mr. Monfor,

I am following up on the attached letter which was sent out in October 2014 initiating informal Section 106 cultural resources consultation. Although the attachment is a form letter, I understand the original was addressed to your previous president, Penny Carty. The Alaska LNG is currently gathering information about cultural resources in preparation for submitting the project application to the Federal Energy Regulatory Commission (FERC) in the third quarter of 2016. As the program continues to develop, we would like to have further discussions with the Salamatof Native Association, Inc.

In addition, the FERC sent out letters to initiate government-to-government consultation on May 20, 2015. This letter requested input on the environmental impacts associated with construction and operation of the Alaska LNG project. If you wish to participate in a government to government consultation, please contact FERC at your earliest convenience. The Alaska LNG looks forward to continued dialogue with you as the Project progresses.

## Alaska Pipeline Service Company APSC

P.O Box 196660

ANCHORAGE, ALASKA 99519-6660TELEPHONE (907) 787-8700

October 30, 2014

Charlie Kominas Alaska LNG Project 3201 C Street, Suite 506 Anchorage, Alaska 99503

Dear Mr. Kominas:

Thank you for the Alaska LNG Project introductory letter received September 29, 2014 regarding the FERC Pre-Filing process (Ref No.: USAI-PE-SGEIS-00-0004-0713). As you know, Alyeska Pipeline Service Company is the agent for the Trans Alaska Pipeline System owners who hold properties and rights-of-way along the first 400 miles of the Alaska LNG Project area. Also, in 2013 Alyeska entered into a Master Coordination and Reimbursement Agreement with ExxonMobil Alaska Production, Inc. about the Alaska LNG Project, which agreement will expire April 30, 2015.

Please note that Alyeska has not reviewed the proposed alignment depicted on the route maps and therefore does not endorse any specific, proposed Alaska LNG alignment where it is in the TAPS area. It may be time, however, during the FERC pre-filing period, to commission an analysis of TAPS operation and/or integrity concerns with the proposed Alaska LNG Project route. If you agree, we request your consideration of funding an Alyeska engineering study of the route from Deadhorse to the Manley Hot Springs Road crossing at Livengood. With your concurrence, we will prepare an estimate of cost and notify you in accordance with the Master Coordination and Reimbursement Agreement.

I can be reached at (907)787-8170 to discuss this matter further.

Sincerely.

Peter C. Nagel, SR/WA Land and Right-of-Way

RE: SCLNG 2013 Summer Field Studies – BLM Request for 2002 Cultural Resources GIS Data AA-093595 8151 (931); AA-093592 2801 (941)

Dear Ms. Jacobson:

The Alaska South Central Liquefied Natural Gas (SCLNG) Project Team appreciated meeting with staff from Bureau of Land Management's (BLM) Central Yukon Field Office on June 21, 2013. It was a very productive meeting. As you know, the purpose of the meeting was to discuss the request described in a June 18, 2013 BLM letter regarding our Cultural Resources Use Permit application for SCLNG's 2013 summer field studies cultural resource survey.

The intent of this letter is to provide the BLM requested digital GIS data supporting the report entitled "Results of the Phase I Cultural Resources Survey of the proposed Alaska Gas Pipeline Project Area, Southern Route" submitted to BLM in 2002 by URS Corporation and its contractor Northern Land Use Research-Alaska in support of the Alaska Gas Pipeline Project Team (AGPPT) proposal. This digital data includes pedestrian survey polygons and areas of previous shovel testing and surface collection and will be used to assist the BLM review of SCLNG's 2013 survey proposal.

We are pleased to inform you that the AGPPT Project has agreed to release the heritage archeology electronic GIS data as a courtesy and in the spirit of good faith assistance to accelerate BLM's issuance of the archaeological survey permit for SCLNG's summer field studies work. Please note, however, that these files are considered to be business confidential and we request that BLM maintain them as such.

Should you have any questions regarding this data, please do not hesitate to call me at (985) 259-0036 or Ben Wood at (907) 929-4113 to discuss. I am greatly appreciative of the assistance that BLM staff has provided on behalf of the SCLNG Project:

Sincerely,

Charlie Kominas Alaska South Central LNG Project Environmental, Regulatory and Land Manager For and on behalf of ExxonMobil Alaska Production Inc.

RE: Alaska South Central LNG Project Description of Work Activities for Next Fiscal Year BLM Serial No. AA-93952

Dear Mr. Lloyd:

This letter addresses Section 4.1 of the Cost Reimbursement Agreement Between ExxonMobil Alaska Production Inc. and Bureau of Land Management Alaska State Office ("Agreement") for the Alaska South Central LNG (SCLNG) Project to advise the Bureau of Land Management (BLM) of any work planned during the next fiscal year (October 1, 2013 to September 30, 2014). At this time, the SCLNG Project plans to complete the various reports required by BLM and other agencies following the 2013 summer field studies program and begin planning for potential future field studies. The SCLNG Project will inform the BLM as soon as additional work scope is confirmed for the next fiscal year so that the agency may further enhance its Initial Work Plan and budget estimate as described in the Agreement.

If there are any questions or you require further information, please feel free to call me at (281) 654-3289 or Ben Wood at (907) 929-4113.

Sincerely,

Clerk Konto

Charlie Kominas Alaska South Central LNG Project Environmental, Regulatory and Land Manager For and on behalf of ExxonMobil Alaska Production Inc.

Mr. Robert Lloyd Chief, Branch of Lands and Realty Bureau of Land Management 222 West 7<sup>th</sup> Ave Anchorage, Alaska 99513-7504

5ubject: Alaska LNG Project Description of Work Activities for Fiscal Year 2014 BLM Application Serial No. AA-93952

Dear Mr. Lloyd:

This letter addresses the requirement in Section 4.1 of the Cost Reimbursement Agreement between ExxonMobil Alaska Production Inc. and Bureau of Land Management Alaska State Office, for the Alaska LNG Project, to advise the Bureau of Land Management (BLM) of any work planned during the next fiscal year (October 1, 2013 to September 30, 2014).

In October, the Alaska LNG Project selected a site in the Nikiski area on the Kenai Peninsula as the lead site for the proposed natural gas liquefaction plant and terminal. Pipeline routing definition work is ongoing. A revised *Application for Transportation and Utility Systems and Facilities on Federal Lands* will be submitted in the second quarter of 2014 following finalization of the pipeline route.

In addition, the Alaska LNG Project plans to conduct a 2014 Field Study Program during the period between approximately April 1 and October 31, 2014. The primary objective is to collect the data necessary to support environmental reporting and permitting for the Project. The focus of the studies will be along the pipeline route from Livengood to the Nikiski LNG plant site. These studies may include the following disciplines: Cultural Resources; Stream Fish; Hydrology; Raptors; Ambient Noise Monitoring; Contaminated Sites; Wetlands (mapping and field verification); Vegetation (mapping and field verification); Sediment Sampling; and Air Quality.

An ExxonMobil Subsidiary

The majority of the 2014 Field Study program will be conducted on State- and privately-owned lands. However, there may be activities on BLM lands. Thus, we anticipate a level of support from the BLM similar to 2013 which included the processing of Temporary Use Permits and a Permit for Archaeological Investigations on federal lands. In the event the Project initiates the Federal Energy Regulatory Commission (FERC) pre-file process, coordination activities with FERC and federal and state agencies may be needed in support of required pre-filing documents.

If there are any questions or you require further information, please feel free to contact me at (832) 624-2816 or Ben Wood at (907) 929-4113.

Sincerely,

Charlie Kominas Alaska LNG Environmental, Regulatory and Land Manager For and on behalf of ExxonMobil Alaska Production Inc.

## **Re:** Review of Cultural Resources Reports Submitted by the Alaska Pipeline Project and the Alaska LNG Project

Dear Mr. Lloyd:

On behalf of the Alaska LNG Project (Project), this letter and its attachments seek your concurrence regarding data to be used in the regulatory approval process for the Project. As discussed in previous meetings with the Bureau of Land Management (BLM), a considerable body of work has been compiled for portions of the proposed Project footprint north of Livengood, Alaska, including data that is common to a previous gas project (Alaska Pipeline Project). The available body of work includes information gathered by the previous project as well as information gathered during supplemental surveys conducted by the Project in 2013. To date you have received the following reports for the proposed Project footprint north of Livengood:

| Reference No.                                                                                                                                                                                                                                                                                                                                                        | Title                                                                                                                                                              | Year |

| USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010<br>USAG-UR-SRZZZ-000010 |                                                                                                                                                                    | 2011 |

Some of the previously gathered data are no longer applicable or within the proposed Alaska LNG Project footprint; therefore the Project has developed and enclosed the following: an overview of the Cultural Resources Program to explain program objectives and summarize study results (Attachment A); a site tracking table summarizing the cultural resource sites located within a 300-foot-wide corridor centered on the potential Alaska LNG Mainline Pipeline

centerline and the Point Thomson Pipeline centerline (Attachment B); and two mapbooks (one for the Mainline Pipeline and one for the Point Thomson Pipeline) illustrating the locations of the cultural resource sites listed in the summary table. These mapbooks also include sites outside of the study corridor (Attachment C).

The Project requests BLM's review and endorsement of this data set so that it may be used in the upcoming Federal Energy Regulatory Commission application and resulting Environmental Impact Statement. If you have any questions or require further information, please contact Adrienne Rosecrans at (832) 624-2722.

Sincerely,

Jub

Ruben Medrano Alaska LNG Regulatory Lead For and on behalf of ExxonMobil Alaska LNG LLC

October 27, 2014

Dr. Robert King, BLM State Archaeologist U.S. Department of the Interior, Bureau of Land Management, Alaska State Office 222 West 7<sup>th</sup> Ave., #13 Anchorage, AK 99513-7504

Subject: Request for Informal Consultation under Section 106 of the National Historic Preservation Act FERC Docket No.: PF14-21-000

Dear Dr. King:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (together, Project Participants) have initiated the Federal Energy Regulatory Commission's ("FERC" or "Commission") pre-filing review process for the Alaska LNG Project (Project) under 18 C.F.R. Section 157.21 of the FERC regulations. On September 12, 2014, the Director of the Office of Energy Projects ("OEP") issued a letter order granting the Project Participants' pre-filing request and assigning the Project FERC Docket No. PF14-21-000. Project Participants plan to prepare and file an application for authorization under Section 3 of the Natural Gas Act to site, construct and operate the Alaska LNG Project.

#### Alaska LNG Project Overview

The Alaska LNG Project Participants are proposing to construct one integrated liquefied natural gas (LNG) project with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular the Point Thomson Unit and Prudhoe Bay Unit production fields on the Alaska North Slope for export in foreign commerce. The proposed project includes the construction of a liquefaction facility in south central Alaska, an approximately 800-mile mainline gas pipeline, a gas treatment plant on the North Slope, and gas transmission lines connecting the gas treatment plant to the Point Thomson Unit and Prudhoe Bay Unit fields. The mainline gas pipeline will include at least five off-take points to allow for the opportunity for future in-state deliveries of natural gas.

Enclosed with this letter are a general project map and a project overview diagram reflecting the proposed facilities and their planned locations. Additional information on the project can be found at <u>www.ak-lng.com</u>.

FERC authorizations are required to construct and operate these facilities. The Project Participants are targeting to file a formal application with the FERC in September 2016. FERC authorizations for the project and commencement of construction are anticipated in the 2018 – 2019 timeframe. Pursuant to this schedule, facilities would begin operating in the 2024 – 2025 timeframe.

Proposed facilities will be located in the North Slope Borough, Yukon-Koyukuk Census Area, Fairbanks North Star Borough, southeast Fairbanks Census Area, and the Kenai Peninsula Borough.

#### FERC Pre-filing Process

The FERC will be the lead federal agency responsible for implementation of the National Environmental Policy Act (NEPA), and the National Historic Preservation Act (NHPA; 16 USC § 470 as amended). Pursuant to 36 CFR 800; and at 18 CFR Parts 380.12, 380.14, and Appendix A to Part 380; and pursuant to the FERC's *Guidelines for Reporting on Cultural Resources Investigations for Pipelines* (December 2002), Project Participants are asked to consult with the State Historic Preservation Office, Alaska Native Organizations, and/or land-managing agencies as early as possible in the project planning.

Project Participants do not represent the FERC in terms of government-to-government consultations with Alaska Native Tribes. The FERC has an established policy for consulting with Native American Tribes, articulated in Order 635, *Policy Statement on Consultations with Indian Tribes in Commission Proceedings* issued July 23, 2003. The FERC will initiate direct consultations with Tribes when it issues its Notice of Intent to Prepare an Environmental Impact Statement (NOI). For all major projects, after the NOI is issued, the FERC will also write letters to Alaska Native Tribes that may attach religious or cultural importance to historic properties in the area of potential effect, and follow up Tribal contacts with emails, telephone calls, or meetings. Feel free to discuss any concerns directly with the FERC archaeological staff by emailing or calling Lori Boros, FERC Archaeologist at 202-502-8046 (email: Lori.boros@ferc.gov).

Project Participants have met numerous times with you and your staff to discuss field survey methodologies for the 2013 and 2014 field seasons, a process for review and acceptance of prior project data, and the Section 106 process in general. However, no formal consultation has been initiated with the BLM regarding the project; therefore, with this letter Project Participants, acting as the FERC's designated non-federal representative for purposes of complying with Section 106 of the NHPA, respectfully requests your input regarding compliance with the relevant historic preservation laws. Project Participants understand that the BLM is the lead federal agency responsible for issuing the Right-of-Way Grant for the Project and will coordinate that process with the other federal land managing agencies affected by the Project. However, at this time, no other federal land managing agency is affected by the Project.

On behalf of the Project Participants we appreciate your assistance with this request. If you have any questions, please contact me at 832-624-2816 or by email at Charlie.kominas@exxonmobil.com.

Sincerely,

Clarke Kominas

#### Re: Alaska LNG Phase II Site-Specific Plans for NRHP Eligibility Evaluations

Dear Mr. Hedman:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 field work plan detailing proposed methods for determining National Register of Historic Places (NRHP) eligibility at specific, select archaeological sites on BLM lands within the project footprint.

Upon your review of the plan, we would like to arrange a meeting to seek your input and agreement with our proposed methods.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or <u>caryn.rea@exxonmobil.com</u>.

Alan Peck Soil, Water and Air Program Lead BLM State Office 222 W 7th Ave. #13 Anchorage, AK 99513

#### Re: Alaska LNG air quality modeling approach for Federal Conservation Units

Dear Alan

The Alaska LNG Project plans to construct several stationary sources of air emissions as part of its plan to construct an integrated project with interdependent facilities for the purpose of liquefying natural gas for export and opportunity for in-state delivery. This letter and supporting documentation, was developed in response to a meeting between the Alaska LNG Project team, the Federal Energy Regulatory Commission (FERC), Federal Land Managers (FLM), and the Alaska Department of Environmental Conservation on April 21, 2015.

The enclosed memorandum and supporting information, outlines Alaska LNG's proposed air dispersion modeling approach for stationary sources proposed to be constructed as part of the Alaska LNG Project, including the Gas Treatment Plant (GTP) on the North Slope, compressor stations along the proposed pipeline, and the Liquefaction Facility along Cook Inlet. The approach addresses the modeling and air quality-related analyses that would be required to support the review of the project under the federal National Environmental Policy Act (NEPA). This approach does not address air quality permitting required by agencies that implement the Clean Air Act, although the analyses that are prepared in support of those applications also would be used to support the NEPA process. In evaluating impacts from proposed project sources, this modeling approach considers Federal Conservation Units (Class I and sensitive Class II areas) as nominated by the National Park Service and U.S Fish and Wildlife Service. The U.S. Bureau of Land Management chose not to nominate any Federal Conservation Units as sensitive Class II areas.

Since this modeling approach will serve as the basis of the air quality impact assessment to be provided in Resource Report 9 as part of the FERC application, the Alaska LNG Project requests agency comments by July 15, 2015.

Please contact our Environmental Impact Statement Advisor, Norman Scott, at 907-929-4129 or by e-mail at norm.scott@exxonmobil.com if you have any questions.

Karen Wuestenfeld Alaska LNG Project 3201 C Street, Suite 506 Anchorage, AK 99503

Dear Ms. Wuestenfeld:

The BLM has reviewed the Memorandum of Modeling Approach for Federal Conservation Units for the Alaska LNG Project, dated June, 2015. Overall, the memo appears to present a good roadmap for the dispersion modeling. We do find a few areas in need of correction or further information, as detailed below.

- 1. GTP should be identified in parenthesis next to Gas Treatment Plant in Tables 1 and 2 and spelled out in the GTP column in Table 3.
- 2. In Table 3, in the Design Capacity/Total Power row please indicate whether the power is input or output.
- 3. In Table 3, for Surface UA Meteorology an explanatory footnote should be added for 'MAKEMET'.
- 4. Footnote 7 is missing from (not indicated anywhere in) Table 3.
- 5. In Table 3, items such as Denali(183), Gates(9), Yukon Flats(16), etc. need explanations. What are the numbers in parentheses?
- 6. To address Air Quality Related Values (AQRVs) for the Gas Treatment Plant (GTP), why would there be no Visibility modeling (VISCREEN/PLUVUE) or Deposition modeling (AERMOD) performed when the GTP is likely to need a Prevention of Significant Deterioration (PSD) permit and is located only 94 km (58 miles) from the Arctic National Wildlife Refuge?
- 7. There appear to be several sources in Table 3 w/in 300 km of a Class I/sensitive Class II area. Why are some of the sources (GTP, Comp. Station 10, Heater #1 and Station #16/Heater #2) not being modeled for visibility and deposition in the near-field?

- 8. Table 3, footnote #4 This is irrelevant for NEPA purposes; therefore this source should be modeled.
- 9. Why is MAKEMET being used? AERMET is the appropriate met pre-processor for use with AERMOD.

If you have any questions regarding our comments please do not hesitate to contact me. I can be reached email at <u>elwillia@blm.gov</u> or by telephone at (907) 271-5762.

#### Re: Visual/Aesthetics Study Work Plan

Dear Mr. Goodwin:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 study plan to conduct surveys that identify visually sensitive resources that may be impacted by the construction and operation of the Alaska LNG project. The goal of this study is to describe existing visual conditions in the Project Planning Area in support of the Federal Energy Research Commission (FERC) application and subsequent Bureau of Land Management (BLM) and State Pipeline Coordinator's Office (SPCO) permits. In addition to identifying visual viewsheds, the study will address those areas of high recreational use that could be sensitive to changes from construction and operation.

We are available to walk through the plan components with the BLM team at your earliest convenience. If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or <u>caryn.rea@exxonmobil.com</u>.

Sincerely,

Kareh Wuestenfeld

Alaska LNG Project EIS Lead For and on behalf of ExxonMobil LNG, LLC

Ms. Caryn Rea Sr. ElS Advisor AK LNG Project 3201 C Street, Suite 505 Anchorage, AK 99503

Dear Ms. Rea:

ExxonMobil Alaska LNG LLC requested and received a permit for archaeological investigations on Bureau of Land Management lands in the Umiat and Fairbanks Meridians on 12 May, 2015 (Permit AA-094006). Following this approval Northern Land Use Research Alaska LLC requested approval on behalf of ExxonMobil Alaska LNG LLC for fieldwork authorization for specific archaeological survey and testing on lands managed by the Central Yukon Field Office. The exact nature of testing and sites involved was presented to this office for approval. After review it was determined that the proposed testing, which was largely limited to systematic shovel testing at select sites, would result in unnecessary impacts to site CHN-00018. Through consultation with Central Yukon Field Office archaeologist Bill Hedman, it was determined that only very minimal sub-surface testing within the sod layer would be permitted at this sensitive historic site; these changes were reflected in a new draft of proposed Phase II protocols and was approved for fieldwork by this office on 22 May 2015. A teleconference to again discuss the aforementioned BLM approval was hosted by ExxonMobil on 10 June 2015 and attended by Mr. Hedman and several members of the AK LNG team; no additional concerns were raised by BLM.

The methods described in the approved Request for Fieldwork fall under our category of casual use, and therefore do not require a permit from our field office. Furthermore, this action is covered under Departmental Categorical Exclusion 1.6, i.e., "Nondestructive data collection, inventory (including field, aerial, and satellite surveying and mapping), study, research, and monitoring activities," and as such does not require any further NEPA review.

Our findings of casual use and Departmental CX 1.6 are based upon the proposed activities and locations specifically outlined in your application, specifically pedestrian surveying and recording for cultural resources with limited testing (i.e., select standard shovel test pits at specific topographic locales). If you need to work outside of these specifics, in either the proposed field work (e.g., test excavations; camping; ATV access) or location, please contact us for approval. If you have questions, feel free to contact either myself (474-2356) or Bill Hedman, Archaeologist (474-2375), at any time.

MAY 2 0 2016

Mr. Charlie Kominas ExxonMobil Alaska LNG LLC 3201 C Street, Suite 506 Anchorage, AK 99503

Dear Mr. Kominas:

As you may know, on December 4, 2015, the President signed into law the Fixing America's Surface Transportation (FAST) Act. Title 41 of the FAST Act (hereafter FAST-41) created a new governance structure, set of procedures, and funding mechanisms to improve the timeliness, predictability, and transparency of the Federal permitting and environmental review process for major infrastructure projects (i.e., "covered projects") across a broad range of sectors and project types (the full text of Title 41 can be viewed here: https://goo.gl/ts1mCt).

FAST-41 defines "covered projects" as those that require authorization or environmental review by a Federal agency involving construction of infrastructure for a covered sector, are subject to the National Environmental Policy Act of 1969 (NEPA), are likely to require a total investment of more than \$200,000,000, and do not qualify for abbreviated authorizations or environmental review processes. They may also include construction projects in covered sectors that are subject to NEPA for which, due to their size and complexity, the applicable Federal agencies determine the FAST-41 coordination process and oversight would be beneficial.

One of the first actions that FAST-41 requires agencies on the newly-established Federal Permitting Improvement Steering Council (hereafter Council) to take is to establish an inventory of all existing "covered projects" that have pending Federal environmental reviews or authorizations by June 1, 2016. Agencies must then create "a specific and searchable entry" for each project on the Federal Infrastructure Permitting Dashboard (www.permits.performance.gov) by June 15, 2016.

Your Alaska LNG project has been identified as a potential "covered project" because (1) it is subject to NEPA and (2) requires a total investment of more than \$200,000,000 and does not qualify for an abbreviated authorization or environmental review process.

The following information, which we have generated from previously-provided project documentation, will be publicly reported for "covered projects":

**Project Information** 

- Title
- Sector (e.g., Renewable Energy Generation)
- Type (e.g., Solar, Wind, Geothermal, etc.)
- Description
- Status (In Progress/Delayed/Paused)
- Website (if available)
- Is Total Estimated Project Cost More than \$200 Million? (Y/N)
- Location: City, County, and State(s)

Schedule Information

- Date Application Received by Lead Agency
- Date Application Accepted for Review by Lead Agency
- Draft Environmental Assessment (EA) Complete (If applicable)
- Final EA Complete \*
- Date of FONSI \*
- Draft Environmental Impact Statement (EIS) Published \*
- Final EIS Published \*
- Date of ROD \*
- Additional Agency-Specific Actions ^

\* If applicable; ^ by August 15

Lead Agency Information

- Agency/Department
- Bureau/Mode
- POC Name
- POC Title
- POC Email

Project Sponsor Information

- Project Sponsor
- Sponsor POC

If you believe any of this information represents proprietary or confidential business information, please notify me before May 27, 2016, with your reasons, and we will make all reasonable efforts to ensure such information is not made public. Otherwise, all of the above project information for existing "covered projects" will be posted on the Dashboard no later than June 15, 2016.

In addition, for any project for which a Draft EA (if applicable), final EA, or draft EIS has not yet been released, the agencies involved in the review of these projects will be required to develop a detailed Coordinated Project Plan, including a detailed review schedule for public involvement and completion of all required Federal environmental reviews and authorizations, and to publicly post these documents and related project information within sixty days after the initial project information listed above is posted to the Dashboard. Project sponsors are expected to cooperate throughout the Federal environmental review and authorization process.

These early-stage projects would receive the following benefits:

- · Use of clear procedures to agree upon, modify, and resolve issues with project timelines
- Greater transparency into the Federal permitting process and schedule through tracking on the public Federal Permitting Dashboard
- Enhanced oversight from the new Council
- Potential for adoption of State environmental reviews
- Limitation of lawsuits on authorizations and environmental reviews to those filed not later than 2 years after the date of a Federal Register notification of the final approval and,
- Special consideration for the judicial review of actions seeking temporary restraining orders or preliminary injunction against the "covered project"

Lastly, note that Section 41009 of the FAST Act allows agencies to issue new regulations to establish a "fee structure for project proponents to reimburse the United States for reasonable costs incurred in conducting environmental reviews and authorizations for covered projects." OMB is currently developing the guidance that will inform these regulations, and there will be no fees assessed on "existing" "covered projects" at this time.

Thank you for cooperation, and we look forward to working with you in this new process. If you have any questions regarding FAST-41 and AGDC's pipeline right-of-way application, please do not hesitate to contact Earle Williams, Natural Gas Pipelines Project Manager. Mr. Williams can be reached by email at <u>e1willia@blm.gov</u> or by telephone at (907) 271-5762.

Sincerely,

Timothy J. La Marr Field Manager Central Yukon Field Office

#### Alaska LNG Project

10613 West Sam Houston Parkway N., Suite 500 Houston, Texas 77064

June 9, 2016

Mr. Timothy J. La Marr Field Manager, Central Yukon Field Office Bureau of Land Management 222 Univerrsity Avenue Fairbanks, Alaska 99709-3816

Re: 2880 (940) AA-93592

Dear Mr. La Marr:

In response to your letter dated May 20, 2016 regarding the the Alaska LNG Project (Project) being identified as a potentially "covered project" under Title 41 of the Fixing America's Surface Transportation (FAST) Act, the Project has developed an Attachment A to this letter providing specific responses regarding:

- Project Information
- Schedule Information
- Lead Agency Information
- Project Sponsor Information

Please review at your convenience and should you have questions, please contact Matthew Horneman at (907) 929-4132 or via email at <u>matthew.e.horneman@exxonmobil.com</u>

Sincerely,

-DocuSigned by: une 9, 2016

Attachments:

Attachment A

## **Attachment A**

#### **Project Information**

- Title: Alaska LNG Project
- Sector: Energy
- **Type:** Natural Gas
- **Description:** The Project includes the following: a liquefaction facility (Liquefaction Facility) in Southcentral Alaska; an approximately 800-mile, 42-inch diameter gas pipeline (Mainline); a gas treatment plant (GTP) on the North Slope; a gas transmission line connecting the GTP to the PTU gas production facility (PTU Gas Transmission Line or (PTTL)); and a gas transmission line connecting the GTP to the PBU gas production facility (PBU Gas Transmission Line or PBTL). All of these facilities are essential to export natural gas in foreign commerce.
- Status: In Progress
- Website: <u>www.ak-lng.com</u>
- Is Total Estimated Cost More than \$200 Million? Yes
- Location: Rural Alaska from the North Slope (Point Thomson and Prudhoe Bay) to Nikiski, Alaska. Boroughs crossed include: North Slope Borough, Yukon-Koyukuk Census Area, Fairbanks North Star Borough, Denali Borough, Matanuska Susitna Borough, Kenai Peninsula Borough.

#### **Schedule Information**

June 25 2015

Deyna Kuntzsch Chugach National Forest U.S Department of Agriculture 161 East 1<sup>st</sup> Avenue, Door #8 Anchorage, AK 99501

#### Re: Alaska LNG air quality modeling approach for Federal Conservation Units

Dear Deyna

The Alaska LNG Project plans to construct several stationary sources of air emissions as part of its plan to construct an integrated project with interdependent facilities for the purpose of Ilquefying natural gas for export and opportunity for in-state delivery. This letter and supporting documentation, was developed in response to a meeting between the Alaska LNG Project team, the Federal Energy Regulatory Commission (FERC), Federal Land Managers (FLM), and the Alaska Department of Environmental Conservation on April 21, 2015.

The enclosed memorandum and supporting Information, outlines Alaska LNG's proposed air dispersion modeling approach for stationary sources proposed to be constructed as part of the Alaska LNG Project, including the Gas Treatment Plant (GTP) on the North Slope, compressor stations along the proposed pipeline, and the Liquefaction Facility along Cook inlet. The approach addresses the modeling and air quality-related analyses that would be required to support the review of the project under the federal National Environmental Policy Act (NEPA). This approach does not address air quality permitting required by agencies that implement the Clean Alr Act, although the analyses that are prepared in support of those applications also would be used to support the NEPA process. In evaluating impacts from proposed project sources, this modeling approach considers Federal Conservation Units (Class I and sensitive Class II areas) as nominated by the National Park Service and U.S Fish and Wildlife Service. The U.S. Bureau of Land Management chose not to nominate any Federal Conservation Units as sensitive Class II areas.

Since this modeling approach will serve as the basis of the air quality impact assessment to be provided in Resource Report 9 as part of the FERC application, the Alaska LNG Project requests agency comments by July 15, 2015.

Please contact our Environmental Impact Statement Advisor, Norman Scott, at 907-929-4129 or by e-mail at norm.scott@exxonmobil.com if you have any questions.

Sincerely,

**EIS Lead** 

miny aren Wuestenfeld

Forest Service

**Chugach National Forest** 

United States **Department** of

161 East 1st Avenue Door 8 Anchorage, AK 99501-1639

File Code: 2580 Date: July 30, 2015

Karen Wuestenfeld Alaska LNG Project 3201 C Street Suite 506 Anchorage, AK 99503

Dear Karen.

We have reviewed the Memorandum: Modeling Approach for Federal Conservation Units dated June 2015. In general the approach outlined is logical, but lacks sufficient specificity for us to offer formal concurrence on. Please follow up with a more detailed modeling protocol to further elaborate on the following areas:

o **AERMOD** 

- Meteorological data
  - Why MAKEMET for some areas, observations for others?
  - Length of record of surface and upper air data
  - Sources of meteorological data
  - Procedures for accounting for missing data
  - Surface characteristics
    - How will land use/land cover (LU/LC) characteristics be accounted for in **AERMET?**
    - What source(s) of LU/LC will be used?
- **Receptor placement**
- **Emission** rates
  - How calculated
  - Initial NO2/NOx ratios, and sources of where information obtained
- Source information
  - Source release information
    - Stack heights, diameters, flow rates or exit velocities, temperatures for point sources
    - Characteristics for area and/or volume sources and justification of characteristics
    - Emission scalars if some source operations are intermittent.
- Versions of AERMET and AERMOD to be used
- Model control options to be employed for both AERMET and AERMOD
  - How will deposition be handled with AERMOD? The Forest Service has • developed specific guidance on use of AERMOD for deposition and recommends these procedures be followed. These will be supplied upon request.
- CALPUFF  $\mathbf{O}$ 
  - Meteorological fields development
    - Information on sources of MM5/WRF data including

- o Domain configuration (horizontal/vertical)
- o Physics options employed
- o Statistical performance evaluation documentation
- Will CALMET be used to develop meteorological fields? The Forest Service recommends that the Mesoscale Model Interface Program (MMIF) be used in lieu of CALMET.
  - o If so, protocol should identify the following:
    - Model control options
    - Meteorological observations (locations, length of record, etc)
    - Procedures for accounting for missing data (both surface and upper air)
- Dispersion model setup
  - Same information needs under source information sub-bullet above
  - Model control options
  - Receptor grid development (note that many sensitive Class II areas are likely not in the NPS Class I receptor database commonly used for AQRV modeling for CALPUFF).
- Post processing
  - General Information on versions to be used
  - Will POSTUTIL be employed for PNO3/HNO3 rebalance?
  - CALPOST settings for both visibility and deposition
- o VISCREEN/PLUVUE
  - Requires additional information regarding distance from source to areas, view angles, etc.
  - The Forest Service developed a modified version of VISCREEN to account for variable NO2/NOx ratios (previous versions of VISCREEN assumed a fixed 10% ratio, while source test data indicates many combustion sources have higher ratios). We request this version be utilized.

Knowing we were not included in the earlier interagency coordination, your staff provided a list of Alaskan contacts from other federal agencies. However, due to the delay in receiving the Memorandum for review and your request for a quick feedback response, we were unable to coordinate with and review other federal agency feedback. We would welcome further dialogue and coordination with you and other federal agencies on this topic.

Please contact our Resources and Planning Staff Officer, Deyna Kuntzsch, at 907-743-9517 or by email at <u>dkuntzsch@fs.fed.us</u> for further coordination and dialogue.

Sincerely,

wi Mauer-

TERRI MARCERON Forest Supervisor

# Alaska Department of Transportation & Public Facilities

### ADOTPF

## Alaska LNG..

Alaska LNG Project 10613 W Sam Houston Pkwy N Suite 500 Houston, TX 77064

Document No.: USAL-PE-SALTR-00-000002-000

10 November 2015

Alaska Department of Transportation & Public Facilities Attn: Mr. John Linnell: P.O. Box 196900 MS-2525 Anchorage, Alaska 99519-6900

#### Re: Kenai Spur Highway Re-route: Request for Clarification on URA Applicability

Dear Mr. Linnell:

The purpose of this letter is to request that Alaska Department of Transportation & Public Facilities (ADOT&PF) meet and discuss the applicability of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (URA) in the context of the requirements for Privately Funded Right-of-Way Certification, Highway Construction, and National Highway Dedication, combined with an examination of requisite steps to vacate a segment of the legacy (Kenai Spur) highway near Nikiski, Alaska.

#### Executive Summary:

ExxonMobil Alaska LNG LLC (EMALL), on behalf of the Alaska LNG Project participants, AGDC, ExxonMobil, ConocoPhillips, and BP, is considering progressing a land acquisition and highway construction project in Alaska to relocate a segment of the National Highway System to help facilitate the safe execution of a major energy project (Alaska LNG) in the 2018/9-2025 timeframe. At issue is whether the purchase of lands and relocation of occupants during the late 2016-2018 timeframe, required for the completed highway acceptance and transfer to the State, needs to comply with the URA if no Federal funds are used for either development or construction. A potential Federal Highway Administration (FHWA) and ADOT&PF project-specific concurrence or agreement on applicability of the URA will provide the necessary guidance to the acquisition process and facilitate a successful acceptance and transfer of the new highway to the ADOT&PF.

In addition to the URA, key issues to discuss include:

- 1. Whether, as part of the process by which the ADOT&PF would accept and take possession of the relocated segment of the National Highway System, the corresponding segment of the legacy highway would be abandoned and vacated by the State of Alaska?
- 2. What agencies have jurisdiction over the vacation of an existing state highway ROW?
- 3. What are the pertinent policies and/or guidelines that would affect the requisite steps to be taken, and the corresponding timeline for transfer of the legacy highway ROW and facilities to the private project developer?

Concurrence or agreement between the parties, setting forth terms for agency input and expectation for specific requirements to include, at a minimum, the issues discussed herein, should be advanced prior to initiation of the project land acquisition program.

#### Summary:

A land acquisition and highway construction project would relocate a segment of the National Highway System without the use of Federal funds. To successfully execute the highway relocation project, EMALL requires agency clarification on the applicability of the URA with regard to new land rights and ROW needing to be acquired in support of the construction and operation of the new highway segment.

In addition, confirmation of the process required for abandonment and vacation of the corresponding segment of the legacy highway is also needed.

In the event, DOT&PF wishes to have clarifying discussions with our highway relocation consultant, HDR, please feel free to contact Mr. Mark Dalton by calling (907) 644-2071.

If you have questions for EMALL, please contact Jeff Raun by calling (907) 929-4105 with our regulatory group in Anchorage or me by calling (832) 624-2950. If at some point you would prefer to meet and discuss this matter, we are available at your convenience.

Thanks in advance for your support on this matter.

Very truly yours,

Jeffrey D. McDonald Land & Right-of-Way Manager Alaska LNG Project

ENERGY, INSTALLATIONS AND ENVIRONMENT

February 9, 2017

Kimberly D. Bose, Secretary Federal Energy Regulatory Commission 888 First Street NE, Room 1A Washington, DC 20426

Dear Ms. Bose:

As requested, the Department of Defense (DoD) Siting Clearinghouse coordinated within DoD an informal review of the Alaska LNG Project. The results of our informal review indicated that the project proposed by Alaska Gasline Development Corporation, BP Alaska LNG LLC, Conoco Phillips Alaska LNG Company, and ExxonMobil Alaska LNG LLC, may potentially impact military operations conducted in this area.

The data provided for review showed that the project is either near or over the boundary of Clear Air Force Station. If more detailed data is provided, the Air Force will be able to provide a definitive response. I request that you contact 1<sup>st</sup> Lieutenant Steven Havens, at 907-585-6520 or steven.havens3@us.af.mil, to discuss this proposed project. It is my hope that your continued cooperation will help us preserve our military's operational, training, and testing capabilities.

Please note that this informal review by the DoD Siting Clearinghouse does not constitute an action under 49 United States Code Section 44718 and the DoD is not bound by the conclusion arrived at under this informal review. Please call me at 703-571-0076 with any questions.

Sincerely,

Steven J. Sample Deputy Director DoD Siting Clearinghouse

#### Re: Alaska LNG Phase II Site-Specific Plans for NRHP Eligibility Evaluations

Dear Dr. King:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 field work plan detailing proposed methods for determining National Register of Historic Places (NRHP) eligibility at specific, select archaeological sites on BLM lands within the project footprint.

Upon your review of the plan, we would like to arrange a meeting to seek your input and agreement with our proposed methods.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or caryn.rea@exxonmobil.com.

Sincerely,

itemreto M

Re: Response to Knik Tribe Project Comments Alaska LNG PF14-21-000

Dear Mr. Martin:

The Alaska LNG project has reviewed the comment letter sent to FERC by the Knik Tribe, as filed on the docket on October 16, 2015. In this letter, the Knik Tribe expressed interest in participating in the National Historic Preservation Act Section 106 consultation process with FERC as the lead, and with the Project as the non-federal representative. We appreciate the early feedback and input provided in their letter on cultural resources and other environmental and social aspects of the project. In this letter, we provide a summary of our consultation with the Tribe.

As the non-federal representive for Section 106 consultation, the Project sent a letter requesting input on the identification of archaeological sites or Traditional Cultural Properties to potentially affected tribes on October 23, 2014. To date, no direct responses have been received, including from the Knik Tribe. The Project is currently in the process of conducting followup phone conversations with the tribes to solicit feedback.

During the spring and early summer of 2015, the Project conducted open houses in all communities along the Project corridor to inform local residents of upcoming 2015 summer field season fieldwork activities, including cultural resources surveys. Representatives of the Knik Tribe were in attendance at the June 3, 2015 meeting in Wasilla, where Knik administrative centers are located. At this meeting, Project representatives informed the community about upcoming cultural resources work in the Project corridor, which included surveys between Cantwell and Beluga.

Cultural Resources Advisors from Alaskan Tribes accompanied Project cultural resources field crews during the 2015 field season. While the advisors did not represent specific Tribes at this level of informal consultation, their role was to: provide local knowledge and expertise in areas where they are familiar; document cultural resource investigations from an Alaska Native perspective; and comment generally on traditional and cultural practices. Two cultural observers who are shareholders of Cook Inlet Region, Incorporated (CIRI), the upper Cook Inlet Dena'ina

ANCSA regional corporation that includes Knik, accompanied Project cultural resources crews and provided important input during 2015 field surveys.

We appreciate Knik Tribe providing a list identifying general geographic locations with higher potential for containing archaeological sites. We also appreciate their efforts to provide specific locations, based on LiDAR data and published ethnographic sources, of specific drainages containing archaeological sites. The Project has taken this information into account. We look forward to engaging further with the Knik Tribe during the Section 106 process and other community engagements. We will also actively consider the Knik Tribe's comments on other environmental social aspects of the Project in our planning and design.

If you have any questions or additional information requests, please contact me at 907.929.4124 or by email at <u>karen.wuestenfeld@exxonmobil.com</u>.

Sincerely,

Am Utull

Karen Wuestenfeld EIS Lead For and on behalf of Exxonmobil LNG, LLC

Pursuant to AS 46.15 and rules and regulations promulgated thereunder, notice is hereby given that an application was received on September 23, 2013 (Provisional Priority Date), from Alaska Electric & Energy Cooperative Inc., (AEEC) 280 Airport Way, Kenai AK, 99611, to appropriate water as follows:

To withdraw up to 52.56 million gallons of water per year from January 1<sup>st</sup> through December 31<sup>st</sup> from a drilled well, 157 ft. in depth, located in Kenai Peninsula Borough Tax Parcel ID 01505023 at 49989 North Miller Loop Road, within the NE¼NE¼NW¼ Sec 27, T7N, R12W, S.M. Water use is for AEEC's Nikiski Combined Cycle Combustion Plant. This water right will be appurtenant to the Nikiski Combined Cycle Power Plant at Milepost 21.5 of the Kenai Spur Highway, located in the NW¼NW¼ Section 27 and SW¼SW¼ Sec 22, T7N, R12W, Seward Meridian.

You are receiving this notice because you represent the current owners of prior appropriations, under ADL 201536, for Tract A, Williamson Subdivision, Plat 76-73 and under ADL 201537, for Tract B, Williamson Subdivision, Plat 76-73 which potentially could be affected by any permit to appropriate water issued to the applicant AEEC.

Alaska LNG Project LLC is invited to comment on this application. For further information on the subject, please contact Henry Brooks at the telephone number listed in the attached Public Notice or at this e-mail address <u>henry.brooks@alaska.gov</u>. The Water Resources Section must receive comments in writing by 5:00 p.m., November 24, 2015 at the above address to be considered. If issued, a permit may be extended for good cause shown, pursuant to AS 46.15.110 and 11 AAC 93.120(f), without additional public notice.

Henry C. Brooks Natural Resources Manager I Water Management Unit 907-269-8641

ł

From: RAUN, JEFF Sent: Tuesday, November 24, 2015 4:02 PM To: 'Brooks, Henry C (DNR)' Cc: McKim, Julie /C; Horneman, Matthew E Subject: RE: Public Notice of Water Right Application LAS 29332

Mr. Brooks,

Thank you for the opportunity for public comment on Water Right Application LAS 29332 submitted by Alaska Electric & Energy Cooperative Inc. (AEEC) to the Alaska Department of Natural Resources (DNR). The following comments are offered for DNR's consideration.

Alaska LNG Project LLC (hereinafter AKLNG) has no objection to the subject application but notices that it may represent a 4-5 fold increase over current water usage. The application to withdraw up to 52.56 million gallons of water per year is consistent with Temporary Water Use Permit A2010-146 initiated on 12/23/2010, and, we trust, is based on sound business requirements for near-term demand and meets criteria for the intent and ability of the applicant to complete the appropriation.

But given the sizeable increase in demand over current usage and consideration for other industry plans for the area, which will also need water, AKLNG recommends that DNR require the applicant to submit monthly water use reports available to the public that summarize monthly groundwater usage, drawdown, and recovery information. Documentation of water usage and levels is protective of the public interest, considerate of the rights of prior appropriators, and beneficial to ongoing and future operations of the applicant and neighbors.

Also, since the existing well (the point of appropriation) is situated on private land now owned by AKLNG, we ask the DNR condition LAS 29332, as now constituted or hereafter amended, upon compliance by AEEC with the terms and provisions of that certain Easement Agreement between AEEC and Alaska LNG Project LLC dated May 22, 2015, and recorded on June 3, 2015, as Document No. 2015-004592-0, Kenai Recording District.

Thank you for your consideration of these comments. Please contact me directly if you have any follow-up questions.

Regards, Jeff

Alaska LNG Project 3201 C Street Suite 506 Anchorage, AK 99503

Ref No.: LT-AKE-PT-14-0102-001

October 27, 2014

Mr. Greg Balogh Field Office Supervisor National Marine Fisheries Service, Protected Resources Division 222 W. 7<sup>th</sup> Ave. Box 43 Anchorage, AK 99513-7577 Greg.balogh@noaa.gov

RE: Alaska LNG Export Project FERC Docket No.: PF14-21-000

Dear Mr. Balogh:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (together, Project Participants) have initiated the Federal Energy Regulatory Commission's ("FERC" or "Commission") pre-filing review process for the Alaska LNG Project (Project) under 18 C.F.R. Section 157.21 of the FERC regulations. On September 12, 2014, the Director of the Office of Energy Projects ("OEP") issued a letter order granting the Project Participants' pre-filing request and assigning the Project FERC Docket No. PF14-21-000. Project Participants plan to prepare and file an application for authorization under Section 3 of the Natural Gas Act to site, construct and operate the Alaska LNG Project.

In accordance with provisions of the NEPA (83 Stat. 852; 42 U.S.C. 4321 *et seq.*), federal laws governing the protection of Federally listed endangered and threatened species (listed species) including the Endangered Species Act (ESA) (87 Stat. 884, as amended; 16 U.S.C. 153 I *et seq.*), the Marine Mammal Protection Act (MMPA) (86 Stat. 1027; 16 U.S.C. 1361 *et seq.*) and Essential Fish Habitat Consultation (EFH) ( 50 CFR Part 600; 16 U.S.C. 1801 *et seq.*) apply to the review and approval of this Project. This letter is a request to initiate informal consultation with the National Marine Fisheries Service ("NMFS") for the proposed Project pursuant to Section 7(a)(2) of the ESA. The Project Participants are the Commission's designated non-Federal representative under 18 C.F.R. Section 380.13(b)(1) for purpose of informal consultation with the NMFS under the ESA.

Project Participants are in the early stages of planning for the proposed Project. Project Participants have established a preliminary study corridor for the Mainline and study areas for the facilities of the Project. A route within the study corridor will be finalized with stakeholder input during the pre-filing process. A general project overview map depicting the study areas/corridor for the Project is attached for your review, along with GIS shapefiles.

On behalf of the Project Participants, this letter requests any information (including but not limited to a list of species) you may have regarding federally threatened or endangered species or critical habitat that may occur in the vicinity of the Project. Protected species information provided by the FWS will be included in an applicant-prepared Biological Assessment (BA) that will be included as an appendix to Resource Report No. 3 of the Environmental Report (ER) that would form part of our application. It is expected that this BA will be developed over the next two draft submittals of the ER to result in a complete BAE for the final FERC application. FERC and NMFS can then properly consider any effects on known listed species and propose avoidance or mitigation measures during their review. Concurrent consultation with United States Fish and Wildlife Service, Anchorage, Alaska Office will also occur.

We look forward to your participation in the evaluation of this project. If you have any questions, please contact me at 832-624-2816 or by email at Charlie.kominas@exxonmobil.com.

Sincerely,

Charlie Kominas On Behalf of Alaska LNG Project Participants

Re: Water Right Certificate of Appropriation, ADL 201536, Transfer

To Whom It May Concern:

This letter is to advise you that the property Tract A, Williamson Subdivision located in the Kenai Recording District has a current water right, above referenced Certificate of Appropriation. The water right was granted for 7,200 gallons per day for multi-family domestic use in an eighteen unit apartment complex. This water right is subjected to an annual Administrative Service Fee, 11 AAC 05.010(a)(8)(M), see enclosed fact sheet. As an advisory, this annual Administrative Service Fee is active and will be billed in 2017.

I have enclosed copies of the water right Certificate of Appropriation ADL 201536, Water Rights in Alaska Fact Sheet and a summary of the Water Use Act for your review. If you have not utilized the full quantity of water under the Alaska Water Use Act in the last 5 years, you have abandoned the water. You may do a full or partial relinquishment down to the quantity in use. Please contact this office about submitting a Notice of Relinquishment, or perhaps a Statement of Beneficial Use if you are still using the water in the manner listed above in order to move to certificate.

If you have any questions on the matter, please do not hesitate to contact me at telephone number (907) 269-8620. Thank you for your cooperation with the Water Resources Section.

Sincerely,

risting Ballard

#### Kenal Recording District, Third Judicial District, State of Alaska

After recording return to the Grantor:

Department of Natural Resources Division of Mining, Land and Water 550 West 7<sup>th</sup> Avenue, Suite 1020 Anchorage, Alaska 99501-3562

Slate Business - No Charge

### **Fact Sheet**

Division of Mining, Land and Water – February 2006

### Administrative Service Fee

#### Annual Administrative Service Fee.

Under 11 AAC 05.010(a)(8)(M) an annual administrative service fee for each appropriation of water for which a permit, certificate, or an authorization for temporary use of water has been issued is \$50 per year. However, the following uses are exempt from the annual administrative service fee:

- a permit or certificate authorizing the use of 500 gallons or less per d ay for all uses;
- a permit or certificate authorizing domestic use of 1,500 gallons or less per day for one single-family residence or duplex;
- a reservation of water under AS 46.15.145.

#### Why an annual administrative service fee?

The administrative service fee helps pay for the following administrative services:

- Update water right records in an online database for use as a management tool and public record source. This system contains data on customers, water right status, water source (well depth or water body name), type of water use, amount of water, period of water use, water right priority date, and property description (meridian, township, range, section, quarter sections, latitude and longitude, subdivision name or survey number, tract, block, and lot). Currently, the water right database has over 24,000 recor ds.
- Update water source locations on the state's online mapping programs for use by the department and the public.
- Respond to complaints from the public and government agencies regarding water use and misuse.
- Administratively handle complaints and appeals regarding the protection of prior water rights.
- Collect and monitor specific data, such as water use records, stream gage data, water level records, well logs, as-built plans, and specifications.

- Assist the Department of Law with appeals to the Superior Court on water resource management issues and water rights.
- Provide driller's well logs for inclusion in the online water well log database. Currently, the water well log database has over 30,000 records.
- Conduct coastal zone consistency reviews, to assure that the appropriation and use of water is consistent with the Alaska Coastal Management Program.
- Work with potential water users prior to filing water right applications to ensure that water right holders and water resources are not harmed by their proposed activity (examples: Pebble Gold and Copper Mine, Chuitna Coal Mine, Donlin Creek Mine, Blue Lake Hydroelectric, Cooper Creek Hydroelectric, Falls Creek Hydroelectric, Nikaitchuq Offshore Oil and Gas Project, The Ranch Subdivision, and Meadowbrook Subdivision).
- Participate in site-specific water resource planning and review (examples: state area and management plans, federal land management plans, wildlife refuge plans, recreation plans, and groundwater task forces).
- Conduct or assist in hydrologic and water use data collection for specific areas not related to a water right request but to an area of water management concern.

The fee has become necessary as the state legislature has directed the Department to find other sources of revenues to replace general funds. Program receipts are collected from the individual beneficiary of a program, and the funds collected are used to administer that program for the benefit of the water right holders and the gener al public.

#### Why a \$50 fee for the work listed above?

The revenues generated will offset budget cuts and allow us to improve the administration and management of Alaska's water resources. It has been determined that the collection of a fee less

A 17

than \$50 is not economical due to the cost of sending a bill and receipting a payment. It is also a fact that of the permits, certificates, and authorizations subject to this fee, not all of them will receive \$50 worth of work each and every year. Some of the files will require only minimal work. The fee helps pay for the administrative, management, and technical assistance by which the water right system supports the economy of Alaska and its development.

#### Why the exemptions to the fee?

It is not in the state's best interest to impose the fee on an individual or group that has reserved water for instream flows to protect fish and wildlife and public recreation opport unities.

The exemption to the fee for appropriations of 1,500 gpd or less for one single-family residence or duplex is based on the fact that time spent on administrative work associated with this type of use is, on the average, a lot less than on permits, certificates, and authorizations issued for other types of water uses. Water use for a single-family residence or duplex is a very stable water use - the type of water use and the location of water use rarely changes, and the source of water is normally uncontroversial due to the amount of water required. The Department purposely structured this exemption for domestic water uses such as lawn and garden, domestic livestock, greenhouses, and other water-related household amenities. The water well log data obtained from the many singlefamily residences is a valuable source of hydrologic information that is incorporated into an online database shared by state, federal, and municipal agencies, and used by the public and private sectors. The cost of this type of data collected, if it were not collected through the water right application process, would cost much more than the monies collected through an administrative service fee.

In short, the Department of Natural Resources has structured this fee to be fair to all water right appropriators of the state and has considered the economics of collecting a fee, in providing the above exemptions to the fee.

#### Where can I get more information?

More information is available in the Department of Natural Resources' fact sheets on Water Rights in Alaska, Dam Safety in Alaska, Reserving Water for Instream Use, Federal Reserved Water Rights, and Alaska Hydrologic Survey. Further information and application forms may be obtained from the following offices or visit <u>www.dnr.state.ak.us/mlw/water/index.htm</u>.

### WATER USE ACT ALASKA STATUTE 46.15

#### Sec. 46.15.140. Abandonment, Forfeiture, and Reversion of Appropriation.

(a) The commissioner may declare an appropriation to be wholly or partially abandoned and revoke or amend the certificate of appropriation as to the unused quantity of water if an appropriator, with intention to abandon, does not make beneficial use of all or a part of the appropriated water.

(b) The commissioner may declare that an appropriator has wholly or partially forfeited an appropriation, and shall revoke the certificate of appropriation in whole or in part if the appropriator voluntarily fails or neglects, without sufficient cause, to make use of all or a part of the appropriated water for a period of five successive years. A person who has a permit to develop a use of water including but not limited to residential, agricultural, industrial, or mining use, but has not developed that property to the point of water use before permit expiration, may file a request for permit extension with the commissioner.

(c) Failure to use beneficially for five successive years all or part of the water granted in a certificate of appropriation raises a rebuttable presumption that the appropriator has abandoned or forfeited the right to use the unused quantity of water and shifts to the appropriator the burden to prove otherwise to the satisfaction of the commissioner.

(d) If the commissioner revokes a certificate in whole or in part, the portion of the certificate covered by the revocation reverts to the state and the water becomes unappropriated water.

#### Sec. 46.15.160. Transfer and Change of Appropriations.

(a) The right to use water under an appropriation or permit shall be appurtenant to the land or place where it has been or is to be beneficially used, provided, that water supplied by one person to another person's property is not appurtenant to the property unless the parties so intend. An appurtenant water right shall pass with a conveyance of the land, or transfer, or by operation of law unless specifically exempted from the conveyance.

(b) With the permission of the commissioner, all or any part of an appropriation may be severed from the land to which it is appurtenant, may be sold, leased or transferred for other purposes or to other land and be made appurtenant to other land. A permit or certificate or a deed, lease, contract, assignment of permit or other instrument transferring an appropriation must be filed in the office of the commissioner and a certified copy of the instrument must be recorded in the recorder's office of the recording district in which the appropriation is located.

Revised (3/02)

Sec. 1.

### Water Rights in Alaska

#### What are water rights?

A water right is a legal right to use surface or ground water under the Alaska Water Use Act (AS 46.15). A water right allows a specific amount of water from a specific water source to be diverted, impounded, or withdrawn for a specific use. When a water right is granted, it becomes appurtenant to the land where the water is being used for as long as the water is used. If the land is sold, the water right transfers with the land to the new owner, unless the Department of Natural Resources (DNR) approves its separation from the land. In Alaska, because water wherever it naturally occurs is a common property resource, landowners do not have automatic rights to ground water or surface water. For example, if a farmer has a creek running through his property, he will need a water right to authorize his use of a significant amount of water. Using water without a permit or certificate does not give the user a legal right to use the water.

#### How do I obtain a water right?

To obtain water rights in Alaska, you need to submit an application for water rights to the DNR office in the area of the water use. After your application is processed, you may be issued a permit to drill a well or divert the water. Once you have established the full amount of water that you use beneficially and have complied with all of the permit conditions, a certificate of appropriation may be issued. This is the legal document that establishes water rights.

#### What costs are involved?

An application for water rights must be accompanied by the appropriate filing fee as determined by 11 AAC 05.010(a)(8) :

- \$100 for one single-family residence or duplex, or for water use associated with one single-family residence or duplex
- \$1,200 for activities related to oil and gas and associated substances
- Fee varies for activities related to locatable minerals, unless the application is filed under 11 AAC 05.010(a)(9)(E)(i) or (9)(F)(i) - contact Water Resources Section for pre-application meeting

Division of Mining, Land and Water - February 2006

- Fee varies for hydroelectric power generation - contact Water Resources Section for pre-application meeting
- Fee varies for water removal out of a hydrologic unit under AS 46.15.035 or 46.15.037 - contact Water Resources Section for pre-application meeting
- \$200 for 5,000 gallons per day (gpd) or less for a use not listed above
- \$450 for greater than 5,000 gpd and no more than 30,000 gpd for a use not listed above
- \$550 for greater than 30,000 gpd and no more than 100,000 gpd for a use not listed above
- \$900 for greater than 100,000 gpd for a use not listed above

To ensure that the public is notified of proposed water uses, you may be required to pay the cost of a legal advertisement in at least one issue of a local newspaper in the area of the proposed water use. Public notice is required if the appropriation is greater than 5,000 gpd. Public notice may be required for uses of less than 5,000 gpd if the water source is an anadromous fish stream or the water source has a high level of competition among water In addition, permit, certificate, and users. authorization holders are subject to an annual \$50 administrative service fee. Water appropriations of 500 gpd or less for any use, appropriations of 1,500 gpd or less for a single-family residence or duplex, and reservations of water for public benefit are exempt from the annual fee.

#### Why should I apply for water rights?

- If you have water rights, you have legal standing to assert those rights against conflicting water users who do not have water rights.
- A person with water rights has priority to use water over persons who later file for water rights from the same source.
- Anyone who diverts, impounds, or withdraws a significant amount of water for use, without a permit, certificate, or authorization is guilty of a misdemeanor (AS 46.15.180). A significant amount of water is defined by 11 AAC 93.035(a) and (b) as:

4

- the consumptive use of more than 5,000 gallons of water from a single source in a single day;
- the regular daily or recurring consumptive use of more than 500 gpd from a single source for more than 10 days per calendar year;
- the non-consumptive use of more than 30,000 gpd (0.05 cubic feet per second) from a single source; or
- any water use that may adversely affect the water rights of other appropriators or the public interest.
- 4. By filing for water rights, you provide valuable information about water use and water availability in Alaska. Water right records are updated and maintained in an online database. This system contains data on customers, water right status, water source (well depth or water body name), type of water use, water quantity, period of water use, water right priority date, and property description (meridian, township, range, section, quarter sections, latitude and longitude, subdivision name or survey number, tract, block, and lot). Currently, the water right database has over 24,000 records. This information allows state water managers to estimate present uses of water, determine how much water is available from streams and aquifers in the state, protect established water right holders, prevent over-appropriation of water sources, and manage the state's water resources

# What other water resources authorizations are available from the Department of Natural Resources?

- <u>Dam Safety</u>: A certificate of approval is required for constructing or modifying a dam that impounds 50 acre-feet of water and is at least 10 feet high, or is at least 20 feet high, or poses a threat to life and property. An application form and the fee prescribed by 11 AAC 05.010(a)(8) should be filed with the Department of Natural Resources.
- Instream Flow: A certificate is required for maintaining a specific flow in a portion of stream or water level in a lake. An instream flow reservation can be made to protect fish and wildlife habitat, migration, and propagation; recreation and park purposes; navigation and transportation purposes; and sanitary and water quality purposes. An application form and the fee prescribed by 11 AAC 05.010(a)(8) should

be filed with the Department of Natural Resources.

### How do I obtain authorization for short-term water use (temporary water use authorization)

A temporary water use authorization may be needed if the amount of water to be used is a significant amount, the use continues for less than five consecutive years, and the water to be used is not appropriated. This authorization does not establish a water right but will avoid conflicts with fisheries and existing water right holders. The application fee for a temporary water use authorization is \$350 for all uses of water from up to five water sources.

#### Where can I get more information?

More information is available in the Department of Natural Resources' fact sheets on Administrative Service Fee, Dam Safety in Alaska, Reserving Water for Instream Use, Federal Reserved Water Rights, and Alaska Hydrologic Survey. Further information and application forms may be obtained from the following offices or visit www.dnr.state.ak.us/mlw/water/index.htm.

#### Alaska LNG Project

3201 C Street, Suite 506 Anchorage, AK 99503

Document No.: USAG-PE-SALTR-00-000001-000

11 May 2016

Ms. Bridget Crokus Endangered Species Act Consultation Biologist NMFS Anchorage Field Office 222 West 7<sup>th</sup> Avenue Anchorage, AK 99513

#### Re: Alaska LNG 2016 Field Program in the Beaufort Sea

Dear Ms. Crokus:

The Alaska LNG Project team wishes to thank you for meeting with us on April 1, 2016 to discuss the proposed sampling program near West Dock in the Prudhoe Bay Unit for summer 2016. As discussed, the Project plans to mobilize a 50-foot vessel to collect data along the causeway, near the STP proposed dockhead, dredge channel location, and turning basin. The Project has streamlined the summer program to meet two main objectives which include: (1) Collect metocean and bathymetric data in the 2015 test trench locations to validate the GTP sedimentation model; the model will used to more accurately predict dredge volumes at the locations along West Dock that are being considered for module offload and (2) Collect bathymetric data along the causeway and STP location to support feasibility studies for the potential construction of a new dockhead at STP.

The current summer program no longer plans to use vibracores or geophysical equipment, but future work could require the use of such equipment in order to collect data to support our EIS and other Major Permits. The Project will make every effort to engage NMFS in a timely manner in order to understand the requirements and conduct the appropriate consultations.

We thank you again for the time that you took to review our program and we will be sure to inform you of our future plans as they are scoped.

If you have any questions about this Program during implementation, please call Dr. Jennifer Dupont at 832 732 2467.

Sincerely,

PEBAURA

Philip Brinkmann Licensing Manager For and on behalf of EMALL

#### Re: Alaska LNG air quality modeling approach for Federal Conservation Units

**Dear Brooke** 

The Alaska LNG Project plans to construct several stationary sources of air emissions as part of its plan to construct an integrated project with interdependent facilities for the purpose of liquefying natural gas for export and opportunity for in-state delivery. This letter and supporting documentation, was developed in response to a meeting between the Alaska LNG Project team, the Federal Energy Regulatory Commission (FERC), Federal Land Managers (FLM), and the Alaska Department of Environmental Conservation on April 21, 2015.

The enclosed memorandum and supporting information, outlines Alaska LNG's proposed air dispersion modeling approach for stationary sources proposed to be constructed as part of the Alaska LNG Project, including the Gas Treatment Plant (GTP) on the North Slope, compressor stations along the proposed pipeline, and the Liquefaction Facility along Cook Intet. The approach addresses the modeling and air quality-related analyses that would be required to support the review of the project under the federat National Environmental Policy Act (NEPA). This approach does not address air quality permitting required by agencies that implement the Clean Air Act, although the analyses that are prepared in support of those applications also would be used to support the NEPA process. In evaluating impacts from proposed project sources, this modeling approach considers Federal Conservation Units (Class I and sensitive Class II areas) as nominated by the National Park Service and U.S Fish and Wildlife Service. The U.S. Bureau of Land Management chose not to nominate any Federal Conservation Units as sensitive Class II areas.

Since this modeling approach will serve as the basis of the air quality impact assessment to be provided in Resource Report 9 as part of the FERC application, the Alaska LNG Project requests agency comments by July 15, 2015.

Please contact our Environmental impact Statement Advisor, Norman Scott, at 907-929-4129 or by e-mail at norm.scott@exxonmobil.com if you have any questions.

Sincerely,

Karen Wuestenfeid EIS Lead

July 24, 2015

Norman Scott, EIS Advisor AK-LNG 3201 C Street, Suite 506 Anchorage, AK 99503

Dear Mr. Scott:

Thank you for the opportunity to provide comments on the Alaska LNG Project's proposed Air Quality Modeling Approach. The NPS has the following comments for the NEPA air quality analyses affecting the NPS units Gates of the Arctic NP and Preserve, Denali NP and Preserve, Lake Clark NP and Preserve, and Kenai Fjords NP.

1. The Alaska LNG Project air quality analysis should include construction emissions for facility and gas pipeline construction.

The NPS disagrees with screening method #1 presented in the June 2015 Air Quality Modeling Approach Memorandum which states "Evaluate impacts due to operations emissions, but not construction." The NPS requests that to fully evaluate effects under the NEPA process, the Alaska LNG project conduct a two-phase air quality impact analysis for impacts to the above cited NPS Alaska Units. The first phase of the impact analysis should assess the impacts during the construction phase for all of the Alaska LNG project including the construction of the pipeline and the construction of the stationary sources such as the GTP Facility, compressor and heater stations, the Liquefaction facility, and the ship port terminal. The second phase should evaluate impacts due to operations emissions.

The comments below address the air quality impact modeling analysis methodology and data to be applied in both the modeling of the construction phase and the operation phase. The modeling of the two different phases, construction and operations, will be very similar to each other in terms of meteorological data, the air dispersion models and methodologies. The main differences in the modeling of the two different phases will be the source of emissions, the quantity of emissions, and the geographic location of the emission sources. The NPS would like the opportunity to review the modeling protocols for both the construction and operation phase modeling with the AERMOD, CALPUFF, and VISCREEN models. If a PLUVUE II analysis is required, the NPS will provide assistance to Alaska LNG in developing the modeling protocol.

2. The Alaska LNG Project should evaluate impacts of National Ambient Air Quality (NAAQS) criteria pollutants for NPS Alaska units, even where Q/D (emissions for the maximum 24 hour emission rate divided by distance in kilometers) < 10.

The Alaska LNG modeling approach to the apply the Q/D (emissions for the maximum 24-hour emission rate divided by distance in kilometers) screening method to screen out some of the four NPS units from an Air Quality Related Values analysis does not apply for distances less than 50 km as per Federal Land Managers' Air Quality Related Values Work Group (FLAG) 2010 (Section 3.2). Also although the FERC is not a signer to the Federal Memorandum of Understanding (NPS, FWS, USFS, EPA) regarding oil and gas development and the associated air quality analyses, the NPS is referencing this inter Federal government MOU as guidance that Q/D does not apply to an oil and gas project.

Therefore, even though Table 2 in the Alaska LNG Modeling Approach may indicate a Q/D of less than "10" for the NPS Units that are less than 50 km from one of the project's sources, the NPS at this time cannot eliminate those particular sources and the NPS Unit for an air quality analysis until the exact emission quantity and species are known for that particular source. In footnote #1 for Table 3, the value Q should be calculated following the FLAG guidance Section 3.2 and should include primary sulfate (SO<sub>4</sub>) emissions along with the listed NOx+SO<sub>2</sub>+PM.

Regardless of the distances and emissions involved, the NPS is requesting that the NEPA air quality impact analysis model the impacts to the NAAQS criteria pollutants emitted from the from the Alaska LNG project at the four NPS units. As stated in the Modeling Approach document's Table 3, the correct models to calculate impacts of the criteria pollutants (other than ozone) are the EPA AERMOD model for distances of 50 km and less and the EPA CALPUFF model for distance beyond 50 km out to the distance of 300 km from the source to the respective NPS unit. The NPS also agrees with the proposed meteorological data sets listed in Table 3 for the AERMOD near field model and the EPA long-range transport model CALPUFF. The AERMOD modeling protocols should provide a description of the proposed receptor grid resolution for both the construction phase and operation phase for the four NPS units. The CALPUFF analyses can use the CALPUFF receptors from the NPS data base for Denali NP. The CALPUFF modeling protocol should propose a similar receptor grid density for the Gates of the Arctic, Lake Clark, and Kenai Fjords NPs and Preserves.

#### 3. The Air Quality Related Values (AQRV) analysis

The National Park Service Organic Act of 1916 (16 USC1, et seq.) and the Wilderness Act of 1964 (16 USC 1131, et seq.) guide the protection of park and wilderness areas. The general mandates of the Organic Act state that the NPS will "promote and regulate the use of ... national parks...by such means and measures as conform to the fundamental purpose of said parks, ... which purpose of the said parks, ... which purpose is to conserve the scenery and the natural and historic objects and wildlife therein and to provide for the enjoyment of the same in such manner

and by such means as will leave them unimpaired for the enjoyment of future generations (16 USC 1). Thus the NPS has an "affirmative responsibility" to protect Air Quality Related Values (AQRVs).

AQRV analyses for both the construction and operation phases should address impacts to visibility and acid deposition. Impacts to both the Night Sky resource and Visual Scenery resources from both the construction and operation phases should also need to be addressed for the four NPS units.

The Alaska LNG Modeling Approach for the construction phase of the project does not include distances of the construction activity and the emission rates of the potential pollutants, and thus the NPS at this time cannot determine which sections of the pipeline construction will warrant an AQRV analyses for the four NPS units. We request that Alaska LNG perform the Q/D calculations for the construction phase for pipeline sections near the four NPS units.

The Q/D value calculated for the stationary sources in Table 2 is not a bright line at the value of 10, but a guideline. The NPS is requesting that AQRV analyses also be performed for Compressor Stations 4 and 6 near Gates of the Arctic NPP and Compressor Station 14 near Denali NPP. For the acid deposition analyses of total nitrogen and total sulfur the Alaska LNG project may apply either the EPA AERMOD model with the methodologies found in the attached FLM guidance document Near Field Nitrogen Deposition Modeling Guidance for distances less than 50 km or the EPA CALPUFF model for acid deposition for distances greater than 50 km from the source or activity and the respective NPS unit.

4. The Alaska LNG Project should use the EPA CALPUFF model following the methodologies outlined in the FLAG 2010 guidance document to conduct a visible haze analysis for NPS Alaska units.

The NPS agrees with the use of the visibility models proposed in Table 3 to access the impacts to visibility at either distances of less than 50 km with the EPA coherent plume models VISCREEN or PLUVUE II. To calculate impacts of visible haze at the four NPS units at distances of greater than 50 km, the NPS will request that the visible haze analysis use the EPA CALPUFF model . following the methodologies outlined in the FLM's FLAG 2010 guidance document.

#### **Other Comments**

The construction phase air quality analysis, air pollutant emissions to be incorporated in the analysis should include emissions from all sources of air pollutant generating activities such as land preparation, point sources such as concrete and asphalt plants, storage piles of materials, construction equipment, and transportation equipment emissions such as haul trucks and rail transport.

Table 3 for the operations phase air quality analysis, air pollutant emissions to be incorporated in the analysis should include emissions from associated transportation at the LNG facility, including truck, rail and shipping emissions.

While these comments respond to the NEPA process, due to the very close proximity of some of the larger stationary sources to Denali NP and Preserve, the Alaska LNG project should be aware that during the air permitting process Prevention of Deterioration (PSD) the following regulation may apply :

§ 52.21 Prevention of significant deterioration of air quality, 40 CFR 52.21(iii): Notwithstanding paragraph (b)(23)(i) of this section, significant means any emissions rate or any net emissions increase associated with a major stationary source or major modification, which would construct within 10 kilometers of a Class I area, and have an impact on such area equal to or greater than 1 microgram per cubic meter (24-hour average).

Finally, the NPS is strongly suggesting that Alaska LNG conduct a meeting or conference call to discuss the requests above. Most likely the Fish and Wildlife Services and the US Forest Service would also like participate in the same meeting. The meeting should cover modeling of the emission rates and locations from the construction phase and explore how best to conduct the air quality analysis of the construction phase. The meeting agenda should also provide for discussion any questions that Alaska LNG has about the above requests as well as issues raised by the other Federal Land Managers.

The NPS appreciates this effort by the Alaska LNG project to develop this preliminary modeling protocol. The NPS welcomes any questions regarding our comments and recommends future discussions to provide additional detail to the requirements for the NEPA Air Quality Analysis for the Alaska LNG project. Please contact John Notar at 303-969-2079 or john\_notar@nps.gov to arrange further discussion, or with any air quality-related concerns and Brooke Merrell at 503-724-5481 or brooke\_merrell@nps.gov with NEPA-related concerns.

Sincerely,

Jean 6. Janel

#### Re: Visual/Aesthetics Study Work Plan

Dear Ms. Darnall:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 study plan to conduct surveys that identify visually sensitive resources that may be impacted by the construction and operation of the Alaska LNG project. The goal of this study is to describe existing visual conditions in the Project Planning Area in support of the Federal Energy Research Commission (FERC) application and subsequent Bureau of Land Management (BLM) and State Pipeline Coordinator's Office (SPCO) permits. In addition to identifying visual viewsheds, the study will address those areas of high recreational use that could be sensitive to changes from construction and operation.

We are available to walk through the plan components with the National Park Service's team at your earliest convenience. If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or <u>caryn.rea@exxonmobil.com</u>.

Sincerely,

Karen Wuestenfeld Alaska LNG Project EIS Lead For and on behalf of ExxonMobil LNG, LLC

#### Re: Alaska LNG's EIS Baseline Studies 2015 Summer Field Season Protocols

Dear Ms Lee:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal. Project development in the waters of Cook Inlet would include a portion of the Mainline which would cross Cook Inlet, and a marine terminal facility for loading of product in LNG Carriers.

As requested in the Agency Workshops of March 17-19, 2015, we are sending you the protocols (to date) for the Project's 2015 field programs supporting the Project and the EIS baseline study for your information.

If you have any questions or information requests, please contact Erika Herlugson at 907.929.4113 or erika.herlugson@exxonmobil.com.

Sincerely. Hille (Entre Henningson, signing Fore Kassin Whesterfeld)

## Re: Review of Cultural Resources Reports Submitted by the Alaska Pipeline Project and the Alaska LNG Project

Dear Ms Bittner:

On behalf of the Alaska LNG Project (Project), this letter and its attachments seek your concurrence regarding data to be used in the regulatory approval process for the Project. As discussed in previous meetings with the Alaska Department of Natural Resources, Office of History and Archaeology (OHA) a considerable body of work has been compiled for portions of the Project footprint north of Livengood, Alaska, including data that is common to a previous gas project (Alaska Pipeline Project). The available body of work includes information gathered by the previous project as well as information gathered during supplemental surveys conducted by the Project in 2013. To date you have received the following reports for the Project footprint north of Livengood:

| Reference No.                           | Title                                                                                                                                                                               | Year |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| USAKE-UR-SRZZZ-00-0020_B<br>2013 Report | 2013 Phase I Cultural Resource Report,<br>Archaeological Survey and Documentation                                                                                                   | 2013 |
| USAG-UR-SRZZZ-000030                    | Phase I Cultural Resources Overview and Survey<br>Report for the Alaska Pipeline Project, Prudhoe<br>Bay, to the Alaska, United States-Canada Border,<br>2010-2011                  | 2012 |
| USAG-UR-SRZZZ-000010                    | 2010 Cultural Resource Field Study Results, Phase<br>I: Identification Cultural Resource Survey of the<br>Alaska Pipeline Project. Supplemental Report to<br>OHA Permit No. 2010-17 | 2011 |

Some of the previously gathered data are no longer applicable or within the proposed Alaska LNG Project footprint; therefore the Project has developed and enclosed the following: an overview of the Cultural Resources Program to explain program objectives and summarize

study results (Attachment A); a site tracking table summarizing the cultural resource sites located within a 300-foot-wide corridor centered on the potential Alaska LNG Mainline Pipeline centerline and the Point Thomson Pipeline centerline (Attachment B); and two mapbooks (one for the Mainline Pipeline and one for the Point Thomson Pipeline) illustrating the locations of the cultural resource sites listed in the summary table. These mapbooks also include sites outside of the study corridor (Attachment C).

The Project requests OHA's review and endorsement of this data set so that it may be used in the upcoming Federal Energy Regulatory Commission application and resulting Enivronmental Impact Statement. If you have any questions or require further information, please contact Adrienne Rosecrans at (832) 624-2722.

Sincerely,

Midu

Subject: Request for Informal Consultation under Section 106 of the National Historic Preservation Act FERC Docket No.: PF14-21-000

Dear Ms. Bittner:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (together, Project Participants) have initiated the Federal Energy Regulatory Commission's ("FERC" or "Commission") pre-filing review process for the Alaska LNG Project (Project) under 18 C.F.R. Section 157.21 of the FERC regulations. On September 12, 2014, the Director of the Office of Energy Projects ("OEP") issued a letter order granting the Project Participants' pre-filing request and assigning the Project FERC Docket No. PF14-21-000. Project Participants plan to prepare and file an application for authorization under Section 3 of the Natural Gas Act to site, construct and operate the Project.

#### Alaska LNG Project Overview

The Alaska LNG Project Participants are proposing to construct one integrated liquefied natural gas (LNG) project with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular the Point Thomson Unit and Prudhoe Bay Unit production fields on the Alaska North Slope for export in foreign commerce. The proposed project includes the construction of a liquefaction facility in south central Alaska, an approximately 800-mile mainline gas pipeline, a gas treatment plant on the North Slope, and gas transmission lines connecting the gas treatment plant to the Point Thomson Unit and Prudhoe Bay Unit fields. The mainline gas pipeline will include at least five off-take points to allow for the opportunity for future in-state deliveries of natural gas.

Enclosed with this letter are a general project map and a project overview diagram reflecting the proposed facilities and their planned locations. Additional information on the project can be found at <u>www.ak-Ing.com</u>.

FERC authorizations are required to construct and operate these facilities. The Alaska LNG Project Participants are targeting to file a formal application for the Alaska LNG Project with the FERC in September 2016. FERC authorizations for the project and commencement of construction are anticipated in the 2018 – 2019 timeframe. Pursuant to this schedule, facilities would begin operating in the 2024 – 2025 timeframe.

Proposed facilities will be located in the North Slope Borough, Yukon-Koyukuk Census Area, Fairbanks North Star Borough, southeast Fairbanks Census Area, and the Kenai Peninsula Borough.

#### FERC Pre-filing Process

The FERC will be the lead federal agency responsible for implementation of the National Environmental Policy Act (NEPA), and the National Historic Preservation Act (NHPA; 16 USC § 470 as amended). Pursuant to 36 CFR 800; and at 18 CFR Parts 380.12, 380.14, and Appendix A to Part 380; and pursuant to the FERC's *Guidelines for Reporting on Cultural Resources Investigations for Pipelines* (December 2002), Project Participants are asked to consult with the State Historic Preservation Office, Alaska Native Organizations, and/or land-managing agencies as early as possible in the project planning.

Project Participants do not represent the FERC in terms of government-to-government consultations with Alaska Native Tribes. The FERC has an established policy for consulting with Native American tribes, articulated in Order 635, *Policy Statement on Consultations with Indian Tribes in Commission Proceedings* issued July 23, 2003. The FERC will initiate direct consultations with Tribes when it issues its Notice of Intent to Prepare an Environmental Impact Statement (NOI). For all major projects, after the NOI is issued, the FERC will also write letters to Alaska Native Tribes that may attach religious or cultural importance to historic properties in the area of potential effect, and follow up Tribal contacts with emails, telephone calls, or meetings. Feel free to discuss any concerns directly with the FERC archaeological staff by emailing or calling Lori Boros, FERC Archaeologist, at 202-502-8046 (email: Lori.boros@ferc.gov).

Project Participants have met numerous times with you and your staff to discuss field survey methodologies for the 2013 and 2014 field seasons, a process for review and acceptance of prior project data, and the Section 106 process in general. However, no formal consultation has been initiated with the OHA regarding the project; therefore, with this letter Project Participants, acting as the FERC's designated non-federal representative for purposes of complying with Section 106 of the NHPA, respectfully requests your input regarding compliance with the relevant historic preservation laws.

On behalf of the Project Participants, we appreciate your assistance with this request. If you have any questions, please contact me at 832-624-2816 or by email at Charlie.kominas@exxonmobil.com.

é.

Sincerely,

.

Re: Cultural Resources Evaluation, Alaska LNG Project – Proposed 2014 Ambient Air Quality Station, Alaska LNG Project, Nikiski, Alaska

Dear Ms. Bittner:

ExxonMobil Alaska LNG LLC (EMALL), ConocoPhillips Alaska LNG Company, BP Alaska LNG LLC, TransCanada Alaska Midstream LP, and Alaska Gasline Development Corporation (the "Alaska Parties") are currently working together to progress the Alaska LNG Project ("Project"). The Alaska Parties will be installing an ambient air quality monitoring station to collect necessary information for siting and design of the proposed liquefaction facilities. This station will be located on a privately owned land parcel within the Nikiski area on the Kenai Peninsula. Since the installation of the air quality station includes ground-disturbing activities, EMALL has conducted a cultural resources evaluation for the Area of Potential Effect (APE), consisting of a single 2-acre parcel. Although there is no federal nexus or state permit required to install this station on private land, the Project team is voluntarily conducting an analysis of potential effects to historic resources consistent with cultural surveys performed to support other Alaska LNG project activities in the area.

The air monitoring station installation activities are planned to begin mid-November 2014. EMALL, via our consultant URS, has conducted both desktop and field based cultural resource analysis to determine if any historic properties would be affected in the APE. That evaluation was conducted using the same protocols outlined in the August 22, 2014 letter for Alaska LNG Project Geophysical and Geotechnical Site Investigations. This letter and attached memorandum provides the results and recommendation from that analysis.

The desktop review and on-the-ground reconnaissance of the proposed ambient air monitoring station location examined during the course of the current inventory did not result in the identification of cultural resources. In addition, the study confirmed that no previously documented cultural resources were present within this area. Therefore, EMALL does not anticipate that adverse impacts will occur to cultural resources during construction and operation of this facility. We request concurrence with the finding of "No Historic Properties Affected" from the Alaska State Historic Preservation Office.

We appreciate and thank you for your cooperation. If you have any questions about the proposed field studies and the enclosed technical memo, please feel free to contact Mr. Jeff Raun at (907) 929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

Charlie Kominas Alaska LNG Safety, Security, Health and Environment Manager For and on behalf of ExxonMobil Alaska LNG LLC MSJ No Historic Properties Affected Alaska State Historic Preservation Officer Date: ||.12.14 File No.: 3BO-1R FERC Please review 36 CFR 600.137 A.S. 41.35.070(d)

Jeff,

Ms. Bittner forwarded the subject project for review (per Shannon's request). I have attached our stamped concurrence with a finding of 'No Historic Properties Affected'. We were able to expedite the review process this time, but as a reminder we technically have 30 days to respond to requests for concurrence; this quick of turn-around is not always feasible. Thank you for the opportunity to comment and review. Please let me know if I can assist further.

#### Re: 2014 Phase I Cultural Resources Inventory Report, Nikiski, Alaska

Dear Ms. Bittner:

In support of the Alaska LNG Project, ExxonMobil Alaska LNG LLC (EMALL) commissioned URS Corporation (URS) to evaluate potential effects to historic resources in the Nikiski area for the proposed liquefaction facility component of the Project. The survey was accomplished through the application of archaeological sensitivity analysis of the project footprint, pedestrian survey, and shovel testing. Previous survey efforts were documented in a technical memorandum submitted to your office on August 22, 2014. Concurrence of a finding of "no historic properties affected" for the 2014 Nikiski geophysical and geotechnical program was received from your office on August 27, 2014 (File No. 3130-1R FERC AK LNG, 3130-2R SPCO AK LNG).

In 2014, 100 parcels were subject to cultural survey, the results of which are included in the enclosed report titled 2014 Phase I Cultural Resources Inventory Report for the Proposed Liquefaction Facility Component of the Alaska LNG Project, Nikiski, Alaska. The 2014 survey efforts identified eleven historic, mid to late 20<sup>th</sup> Century, resource locations comprised of eight archaeological sites and three isolated finds.

Based on National Register of Historic Places (NRHP) evaluations in the enclosed report, none of the eleven resources are recommended as eligible for the NRHP and no additional work is recommended. We request your concurrence with our recommendations of NRHP eligibility for these eleven resources.

Additional shovel testing to confirm absence of buried archaeological materials is recommended in areas of some parcels identified as having higher archaeological sensitivity. Further shovel probing in these areas is anticipated to occur in the 2015 field season.

We appreciate and thank you for your cooperation. If you have any questions about the field studies and the enclosed inventory report, please feel free to contact Mr. Jeff Raun at (907) 929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

IN

Charlie Kominas Alaska LNG Safety, Security, Health and Environment Manager ExxonMobil Development Company For and on behalf of ExxonMobil Alaska LNG LLC

SUBJECT: 2014 Phase I Cultural Resources Inventory Report, Nikiski, Alaska

The Alaska State Historic Preservation Office (AKSHPO) received notice from your office and ExxonMobil Alaska LNG, LLC regarding the subject cultural resources inventory report. We also appreciated the opportunity to meet with representatives from your office, ExxonMobil, and their consultants regarding the report and its recommendations on February 5, 2014. Following our review of the documentation provided, we offer the following comments:

We concur with the determination that the following sites are not eligible for the National Register of Historic Places (NRHP): KEN-00642, KEN-00643, KEN-00644, KEN-00645, KEN-00646, KEN-00647, KEN-00648, KEN-00649, KEN-00650, KEN-00651, and KEN-00652.

Thank you for the opportunity to comment. We look forward to continued consultation on the subject project. Please contact Shina duVall at 269-8720 or shina, duvall@alaska.gov if you have any questions or if we can be of further assistance.

Richard Vanderhoek Office of History and Archaeology Alaska Department of Natural Resources 550 W. 7<sup>th</sup> Ave. Suite 1260 Anchorage, AK 99501-3557

#### Re: Evaluating the Presence of Submerged Cultural Resources in Cook Inlet

Dear Mr. Vanderhoek:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and Marine Terminal. Project development in the waters of Cook Inlet would include a portion of the Mainline which would cross Cook Inlet, and a Marine Terminal facility for loading of product in LNG Carriers.

As reviewed with you on April 17, 2015, Attachment 1 of this letter reflects the Project's planned methodology for evaluating the presence of submerged cultural resources in Cook Inlet in the Project's marine Area of Potential Effect (APE; preliminary area shown in Attachment 2) in order to satisfy site identification requirements of Section 106 of the National Historic Preservation Act of 1966 (NHPA, as amended) found in 36 CFR 800.4.

We respectfully request your concurrence that for the Cook Inlet marine aspects of the project the approach as outlined in Attachment 1 will satisfy Section 106 NHPA site identification requirements codified in 36 CFR 800.4.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or caryn.rea@exxonmobil.com.

Sincerely,

'em 16

#### Re: Alaska LNG Phase II Site-Specific Plans for NRHP Eligibility Evaluations

Dear Dr. Vanderhoek:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 field work plan detailing proposed methods for determining National Register of Historic Places (NRHP) eligibility at specific, select archaeological sites within the project footprint.

Upon your review of the plan, we would like to arrange a meeting to seek your input and agreement with our proposed methods.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or caryn.rea@exxonmobil.com.

Sincerely,

andlung

Karen Wuestenfeld Alaska LNG Project EIS Lead

## Re: Alaska LNG's Proposed Phase II Site-Specific Methodology for Evaluation National Register of Historic Places (NRHP) Eligibility

Dear Ms. Duvall:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal. Project development in the waters of Cook Inlet would include a portion of the Mainline which would cross Cook Inlet, and a marine terminal facility for loading of product in LNG Carriers.

We provided you with the document detailing our proposed Phase II methods for evaluating National Register of Historic Places (NRHP) eligibility at specific prehistoric and historic sites in the Project corridor on May 19, 2015, and reviewed the proposed methods with you on May 27, 2015.

We respectfully request your concurrence that the proposed site-specific methodology as outlined in our Phase II Site-Specific Protocols document, and discussed with you on May 27, is adequate for evaluating NRHP eligibility.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or caryn.rea@exxonmobil.com.

Sincerely,

arm S. Ulunliff

**SUBJECT:** 2015 Proposed Phase II Site-Specific Methodology for Evaluation of NRHP-Eligibility

The Alaska State Historic Preservation Office (AKSHPO) received documentation from the Alaska LNG Project regarding the proposed methods for evaluating the National Register of Historic Places (NRHP) eligibility of a select list of prehistoric and historic sites in the Project corridor. Following our review of the documentation provided as well as our discussions in a meeting on May 27, we have no objection to the proposed approach for completing these determinations of eligibility (DOE). We look forward to receiving a report of the results of the effort. We will review the recommended DOEs and respond with our concurrence or comments at that time.

Thank you for the opportunity to comment. We look forward to continued consultation on the subject project. Please contact Shina duVall at 269-8720 or <u>shina.duvall@alaska.gov</u> if you have any questions or if we can be of further assistance.

## Re: 2015 Phase I Cultural Resources Survey Report and 2015 Paleontological Resources Survey & Inventory Report for the Proposed Alaska LNG Project

Dear Dr. Vanderhoek:

The Alaska Gasline Development Corporation (AGDC), BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, and ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LLP (a wholly-owned affiliate of AGDC, and with AGDC, collectively referred to herein as "AGDC") (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce and opportunities for in-state deliveries of natural gas.

Enclosed please find one (1) hard copy of the final 2015 Phase I Cultural Resources Survey report and one (1) hard copy of the final 2015 Paleontological Resources Survey and Inventory report for the proposed Alaska LNG Project. Also enclosed is one (1) CD copy of each report. These are being submitted per the stipulations of the Office of History and Archaeology Cultural Resource Use Permit 2015-11. The required OHA cover sheet is also enclosed.

We look forward to the opportunity of working with your office again in the upcoming 2016 field season.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or <u>caryn.rea@exxonmobil.com</u>.

Sincerely,

Karen Wuestenfeld EIS Lead For and on behalf of Applicants

Subject: Determinations of National Register Eligibility for KEN-00656, LIV-00778, and PSM-00580

Dear Mr. Brinkmann:

The Alaska State Historic Preservation Office (AK SHPO) received your correspondence on September 13, 2016 requesting our concurrence on two determinations of eligibility for sites KEN-00656 and LIV-00778. In addition, on August 22, 2016, we received a corrected site form for PSM-00580 with a request for our final concurrence on its National Register eligibility as well. Following our review of the documentation provided, we concur that KEN-00656 and LIV-00778 are **eligible** for the National Register of Historic Places (NRHP) under Criterion D. Further, we concur that PSM-00580 is **not elibible** for the NRHP.

Thank you for the opportunity to comment. We look forward to continued consultation on the subject project. Please contact Shina duVall at 269-8720 or <u>shina.duvall@alaska.gov</u> if you have any questions or if we can be of further assistance.

Mr. John A. Gale, Director Office of Standards and Rulemaking (PHP-30) PHMSA, U.S. Department of Transportation, 1200 New Jersey Avenue, SE Washington, DC 20590–0001 USA

# Re: Request for Interpretation of 49 CFR §192.112(b)(3) and §192.112(b)(2)(iii) with respect to crack arrestor spacing for gas transmission lines

Dear Mr. Gale:

Our project has performed fracture control calculations in accordance with §192.112(b)(1) and found that the fracture arrest requirements of §192.112(b)(2)(iii) cannot be intrinsically obtained with modern X80 line pipe given our anticipated 2,075 psi design pressure, 42" diameter gas transmission line. We plan to utilize an alternative maximum allowable operating pressure design. Therefore, we plan to design crack arrestors with a spacing of 8 joints to meet the requirements of §192.112(b)(3). We are seeking confirmation in this request for interpretation regarding fracture control crack arrestor requirements under 49 CFR Part 192.112(b).

#### **Background**

The regulation at 49 CFR Part 192.112(b)(3) states that

If it is not physically possible to achieve the pipeline toughness properties of paragraphs (b)(1) and (2) of this section, additional design features, such as mechanical or composite crack arrestors and/or heavier walled pipe of proper design and spacing, must be used to ensure fracture arrest as described in paragraph (b)(2)(iii) of this section.

§192.112(b)(2)(iii) goes on to state that fracture control must

ensure at least 99 percent probability of fracture arrest within eight pipe lengths with a probability of not less than 90 percent within five pipe lengths

The language in Part 192.112 (b)(2)(iii) is based on the common approach of specifying pipe toughness requirements such that 50% of pipe joints will be capable of arresting a running ductile fracture. With 50% of pipe joints arresting a crack, the 99% probability in eight joints and 90% probability in five joints criteria are satisfied. It is not clear how this requirement is applied with the use of mechanical crack arrestors since every crack arrestor is expected to arrest a running ductile fracture, and there is no guidance on this in consensus standards.

In PHMSA's March 8, 2011 letter to the Alaskan Pipeline Project, it communicated the following with respect to "Crack arrestor spacing" (emphasis added):

As prescribed in 49 CFR § 192.112(b), a pipeline that operates under the alternative MAOP provisions of Part 192 must be able to demonstrate that failure cracks will selfarrest within five (5) pipe joints with 90% probability, <u>or</u> within eight (8) pipe joints with 99% probability.

The PHMSA letter to APP, which includes the conjunction "or" between the two probabilistic requirements, indicates that ensuring arrest within eight (8) pipe lengths is sufficient to meet the regulatory requirements.

#### **Request for Interpretation**

AKLNG believes that a crack arrestor spacing of eight joints, with each arrestor designed to arrest a running ductile fracture, meets the requirements of §192.112(b)(3) and §192.112(b)(2)(iii). Confirmation of this interpretation is requested.

Thank you for your consideration of this request for interpretation.

Sincerely,

nl

Rick Noecker PHMSA Filing Coordinator AKLNG Project, Pipeline Engineering #19025, 237- 4th Ave SW Calgary, Alberta T2P 0H6

587-476-4891 (voice) 587-582-9666 (mobile) rick.noecker@exxonmobil.com

Pipeline and Hazardous Materials Safety Administration

#### SEP 2 8 2015

Mr. Rick Noecker PHMSA Filing Coordinator Alaska LNG #19025, 237- 4th Ave SW Calgary, Alberta T2P OH6, Canada

Dear Mr. Noecker:

In a letter to the Pipeline and Hazardous Materials Safety Administration (PHMSA) dated April 30, 2015, you requested an interpretation on 49 CFR 192.112(b)(3) and 192.112(b)(2)(iii) with respect to crack arrestor spacing for gas transmission lines.

You stated that you performed fracture control calculations in accordance with § 192.112(b)(1)and found that the fracture arrest requirements of § 192.112(b)(2)(iii) cannot be intrinsically obtained with modern X-80 line pipe for an anticipated 2,075 psi design pressure, 42" diameter gas transmission line. You plan to utilize an alternative maximum allowable operating pressure design with crack arrestor spacing of 8 joints to meet the requirements of §192.112(b)(3). You are seeking guidance regarding fracture control crack arrestor requirements under 49 CFR Part 192.112(b). Specifically, you asked how the § 192.112(b)(2)(iii) requirement is applied with the use of mechanical crack arrestors since every crack arrestor is expected to arrest a running ductile fracture, and you stated that there is no guidance on this in industry consensus standards.

Section 192.112(b) requires the remediation of potential pipe crack initiation, propagation, and arrest of fractures to be based upon the full range of gas compositions, operating pressures, operating temperatures, pipe grades, and maximum operating stresses including maximum pressures and minimum temperatures for shut-in conditions that the pipeline will experience during its operating life. The fracture control described in § 192.112(b) limits the maximum fracture length to 8 pipe joints with a 99 percent probability of arrest through several possible methods an operator may select, which may include higher pipe toughness, heavier walled pipe, crack arrestors (either mechanical or composite) or a combination of these methods.

The Pipeline and Hazardous Materials Safety Administration, Office of Pipeline Safety provides written clarifications of the Regulations (49 CFR Parts 190-199) in the form of interpretation letters. These letters reflect the agency's current application of the regulations to the specific facts presented by the person requesting the clarification. Interpretations do not create legally-enforceable rights or obligations and are provided to help the public understand how to comply with the regulations.

1200 New Jersey Avenue, SE Washington, D.C. 20590 Therefore, it is your responsibility to make sure that the methods chosen are appropriate to the relevant operating factors and § 192.112 requirements are met. I hope that this information is helpful to you. If we can be of further assistance, please contact Tewabe Asebe of my staff at 202-366-5523.

Sincerely,

John A. Gale

Director, Office of Standards and Rulemaking

16 October 2015

Mr. John A. Gale, Director Office of Standards and Rulemaking (PHP-30) PHMSA, U.S. Department of Transportation, 1200 New Jersey Avenue, SE Washington, DC 20590–0001 USA

# Re: Request for interpretation of the cover requirements for the Cook Inlet pipeline crossing and the applicability of 49 CFR §192.327(f)(2)

Dear Mr. Gale:

The Alaska LNG (AKLNG) Project is being developed to condition Alaska North Slope (ANS) natural gas and transport it to a tidewater port near Nikiski on the Cook Inlet for liquefaction and loading to liquefied natural gas (LNG) marine vessels. The project participants include the Alaska Gasline Development Corporation (AGDC) and affiliates of ExxonMobil, ConocoPhillips, BP and TransCanada Pipelines. The proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 1,287-km (800-mi), large-diameter natural gas pipeline from the North Slope.

ExxonMobil Alaska LNG LLC (EMALL) is leading the design and engineering of the Project facilities, including a large diameter gas transmission pipeline that will cross the Cook Inlet in Alaska. EMALL is seeking confirmation that 1) the Cook Inlet is considered "Offshore" for the purposes of CFR 192 and 2) that 49 CFR Part 192.327(f)(2) details the cover requirements for the pipeline segment that crosses the Cook Inlet.

#### Background

In response to Request for Interpretation PI-97-100, PHMSA identified the Cook Inlet waters as "Offshore" with the following statements:

"The lines in Cook Inlet are offshore... "Offshore" means beyond the line of ordinary low water along the portion of the coast of the United States that is in direct contact with the open seas and beyond the line marking the seaward limit of inland waters." "Cook Inlet waters are considered offshore as they are in direct contact with the open sea and not categorized as "inland waters". Inland waters are specifically established by the US Coast Guard under 33 CFR 80.01."

U.S. Coast Guard Title 33 CFR 80.01 goes on to state:

The regulations in this part establish the lines of demarcation delineating those waters upon which mariners shall comply with the International Regulations for Preventing Collisions at Sea, 1972 (72 COLREGS) and those water upon which mariners shall comply with the Inland Navigation Rules.

The waters inside of the lines are Inland Rules waters. The waters outside the lines are COLREGS waters.

U.S. Coast Guard Title 33 CFR 80.1705 declares that:

The 72 COLREGS shall apply on all the sounds, bays, harbors, and inlets of Alaska.

For offshore pipelines, the requirements for cover are covered in 49 CFR 192.327(f)(2), which states:

(f) All pipe installed offshore, except in the Gulf of Mexico and its inlets, under water not more than 200 feet (60 meters) deep, as measured from the mean low tide, must be installed as follows:

(2) Pipe under water at least 12 feet (3.66 meters) deep must be installed so that the top of the pipe is below the natural bottom, unless the pipe is supported by stanchions, held in place by anchors or heavy concrete coating, or protected by an equivalent means.

#### **Request for Interpretation**

Based on the foregoing, the Cook Inlet is considered Offshore in the context of PHMSA's regulations per CFR 192. The Project pipeline as it crosses Cook Inlet, therefore, is an offshore pipeline that is subject to the cover requirements of 49 CFR Part 192.327(f)(2). According to that provision, the Cook Inlet crossing pipeline does not need to be buried so long as it is "supported by stanchions, held in place by anchors or heavy concrete coating, or protected by an equivalent means. EMALL respectfully requests PHMSA's confirmation of this interpretation.

Thank you for your consideration of this request for interpretation. If you have any questions, please contact me at 587-476-4891 or rick.noecker@exxonmobil.com.

Sincerely,

Rale

Rick Noecker PHMSA Filing Coordinator AKLNG Project, Pipeline Engineering For and On Behalf of EMALL

#### Re: Alaska LNG Project –Acceptability of Concrete LNG Storage Tank Design FERC Docket PF14-21-000

Dear Sandra,

The Pipeline and Hazardous Materials Safety Administration (PHMSA) is responding to a request by the Alaska LNG Project to consider the acceptability of an LNG storage tank technology that has not been implemented in a modern plant, and is not well addressed by the current codes and regulations. Because the precast all concrete LNG (PAC-LNG) storage tank technology has been selected as the base case for the Alaska LNG project, PHMSA has been asked to provide an opinion on the applicability of the current codes and standards to such a tank design, for application within the regulation of 49 CFR 193.

PHMSA has reviewed the Alaska LNG document USAL-PL-PRTEC-80-000001-000, titled *Report on Equivalency of NFPA 59A-2001, 2006 and 2013 Editions*, dated 26 July 2016. That document is the basis for this review.

As you are aware, 49 CFR 193 does not contain any specific language that addresses the PAC-LNG technology. Currently, 49 CFR 193 incorporates by reference the 2001 version of the National Fire Protection Association (NFPA) 59A standard. 59A-2001 does not specifically refer to or exclude the PAC-LNG design, but instead refers to several standards written by the American Concrete Institute (ACI).

As outlined in the above mentioned document, the requirements for concrete in cryogenic applications (such as for LNG storage tanks) have changed significantly since the 2001 version of NFPA 59A. The primary change is the reliance on a standard developed by ACI at the request of the NFPA 59A committee – ACI 376-2011, *Code Requirements for Design and Construction of Concrete Structures for the Containment of Refrigerated Liquefied Gases and Commentary.* This standard provides replacement of previous ACI standards that were reference by NFPA 59A, as well as an expanded treatment for cryogenic concrete.

In principle, PHMSA agrees with the presentation of equivalency shown in the Alaska ALNG document and has no objection to the use of precast all concrete storage tanks, provided that they are designed, fabricated, and constructed according to the ACI 376 standard.

PHMSA will continue to work with the Alaska LNG Project to confirm compliance with the siting and design requirements of Part 193 as needed.

If I can be of further assistance, please contact me by phone at 202-366-2694.

Sincerely,

Kenneth Lee Director, Engineering and Research Office of Pipeline Safety

RE: Alaska South Central LNG Project Description of Work Activities for Next Fiscal Year

Dear Mr. Thompson:

This letter addresses the "Agreements" Section I.1 of the Reimbursement Services Agreement Between ExxonMobil Alaska Production Inc. and the Alaska Department of Natural Resources for the Alaska South Central LNG (SCLNG) Project to advise the State Pipeline Coordinators (SPCO) of any work planned during the next fiscal year (July 1, 2013 to June 30, 2014). At this time, the SCLNG Project plans to complete the various reports required by SPCO and other agencies following the 2013 summer field studies program and begin planning for potential future field studies. The SCLNG Project will inform the SPCO as soon as additional work scope is confirmed for the next fiscal year so that the agency may further enhance its Initial Work Plan and budget estimate as described in the Agreement.

If there are any questions or you require further information, please feel free to call me at (281) 654-3289 or Molly Birnbaum at (907) 929-4107.

Sincerely,

Clerken Kon

Charlie Kominas Alaska South Central LNG Project Environmental, Regulatory and Land Manager For and on behalf of ExxonMobil Alaska Production Inc.

RE: Alaska LNG - FY 2014 Reimbursable Services Agreement Work Scope

Dear Mr. de Gruyter,

The purpose of this letter is to address Section 1.2 of the Reimbursable Services Agreement between ExxonMobil Alaska Production Inc. and the Alaska Department of Natural Resources (ADNR) by amending the work plan for fiscal year 2014 (July 1, 2014 through June 30, 2015). As discussed with the State Pipeline Coordinator's Office (SPCO) in recent planning meetings, the Alaska LNG Project is planning 2014 field season activities that will continue through this calendar year. Additional potential work scopes extending beyond this summer season are also included; however, the schedules and activity details are less defined. The intent of this letter is to identify our planned work activities that will likely require input and coordination with state agencies this fall and continue into the first half of 2015. Should activities change or additional activities be considered, we will communicate with your office and update the Work Plan as needed.

Scope of Work/Services - Amendment 1

#### Re: Alaska LNG Phase II Site-Specific Plans for NRHP Eligibility Evaluations

Dear Dr. King:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 field work plan detailing proposed methods for determining National Register of Historic Places (NRHP) eligibility at specific, select archaeological sites on BLM lands within the project footprint.

Upon your review of the plan, we would like to arrange a meeting to seek your input and agreement with our proposed methods.

If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or caryn.rea@exxonmobil.com.

Sincerely,

vvuestenfeld

#### Re: Visual/Aesthetics Study Work Plan

Dear Mr. Morones:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 study plan to conduct surveys that identify visually sensitive resources that may be impacted by the construction and operation of the Alaska LNG project. The goal of this study is to describe existing visual conditions in the Project Planning Area in support of the Federal Energy Research Commission (FERC) application and subsequent Bureau of Land Management (BLM) and State Pipeline Coordinator's Office (SPCO) permits. In addition to identifying visual viewsheds, the study will address those areas of high recreational use that could be sensitive to changes from construction and operation.

We are available to walk through the plan components with the Alaska Department of Natural Resources team at your earliest convenience. If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or <u>caryn.rea@exxonmobil.com</u>.

Sincerely,

Karen Wuestenfeld

#### Re: Signing Authority for ExxonMobil Alaska LNG, LLC Alaska LNG Project

Dear Mr. Brinkman:

The State Pipeline Coordinator's Section (SPCS) is aware of restructuring affecting the Alaska LNG Project and is requesting that documentation for signing authority be submitted to the SPCS for ExxonMobil Alaska LNG, LLC (EMALL). Signing authorities may take a variety of forms but are typically a corporate resolution, a delegation of authority, or a power of attorney. Signing authorities are needed for any individual who will be submitting permit applications, permit amendment requests, the Right-of-Way lease application, other DNR applications, or entering into authorizations on behalf of EMALL. Additionally, please submit an updated list of individuals, with contact information, who are approved to work on EMALL authorizations. If a new organizational chart for the Alaska LNG Project Team has been created that would also be very useful.

The SPCS is furthermore requesting that a new Designated Point of Contact be appointed for the responsibilities outlined under Section II Subsection 8 of the 2014 Memorandum of Agreement (MOA) between EMALL and the SPCS for reimbursable services for the Alaska LNG Project.

Please refer to Enclosures 1 and 2, for the most recent contacts on file for Alaska LNG Project.

Thank you for your attention to these details and if you have any questions please contact Jennifer Murrell at (907) 269-6479.

Sincerely,

unona 😽 Jason Walsh

State Pipeline Coordinator

#### Re: Signing Authority for ExxonMobil Alaska LNG LLC, Alaska LNG Project

Dear Mr. Walsh:

In response to your request by letter No. 15-495-AS, please find enclosed a list of individuals who are approved to request authorizations from the State of Alaska on behalf of ExxonMobil Alaska LNG LLC (EMALL). Additional officers of EMALL are not included in the list because they do not typically sign requests for authorization from the State of Alaska. Also enclosed is documentation of the authority to sign on behalf of EMALL for the individuals provided.

If you have any questions, please contact Julie McKim at (907) 792-9358 or by email at julie.mckim@exxonmobil.com.

Sincerely,

Charlie Kominas Alaska LNG Safety, Security, Health, and Environment Manager ExxonMobil Development Company For and on behalf of ExxonMobil Alaska LNG LLC

#### **Documentation of Authority**

**EXXONMOBIL ALASKA LNG LLC**, a company duly organized and existing under the laws of the state of Delaware (the "Corporation"), for its own behalf and as agent hereby designates, constitutes and appoints **Charlie Kominas** as its true and lawful attorney-in-fact, empowering and conferring upon said person, the authority to do and perform any and all acts in the name and on behalf of the Corporation that may be necessary or appropriate to carry out the purposes of the Alaska LNG Project, including but not limited to, the authority to execute and deliver in the name and on behalf of the Corporation any and all agreements, documents and instruments related thereto as may be deemed necessary or desirable and in the best interest of the Corporation to consummate the purposes mentioned above.

This Limited Power of Attorney is limited to (a) lands, or interests in lands, owned, held, or claimed by the State of Alaska, or over which the State of Alaska exercises jurisdiction; (b) lands, or interests in lands, owned, held, or claimed by the United States or over which the United States exercises jurisdiction and which are located within the boundaries of the State of Alaska or on Outer Continental Shelf lands contiguous to the State of Alaska; (c) lands, or interests in lands, whose ownership or title is disputed by the United States and the State of Alaska; or (d) lands or interests in lands whose ownership or title is Private, Tribal or Agency held which are located within the boundaries of the State of Alaska. This Limited Power of Attorney does not extend to any Oil & Gas Leasehold interest owned by the Corporation.

This Limited Power of Attorney shall be effective as of the date hereof and shall remain in full force and effect until April 1, 2016, or until duly revoked, in whole or in part, by the Grantor or the Board of Directors of the Corporation; whichever is the earlier, provided, however, that all acts lawfully done or performed pursuant to this Limited Power of Attorney by the said **Charlie Kominas** prior to such revocation shall be, and the same hereby are, ratified and confirmed.

IN WITNESS WHEREOF, EXXONMOBIL ALASKA LNG LLC. has caused this Limited Power of Attorney to be signed by a duly authorized officer of the Corporation in the City of Houston, State of Texas, on this day of July, 2014.

STATE OF TEXAS COUNTY OF HARRIS U. S. A. EXXONMOBIL ALASKA LNG LLC.

ydia J. Johnson, Vice President

#### MEMORANDUM OF AGREEMENT BETWEEN THE ALASKA DEPARTMENT OF NATURAL RESOURCES AND EXXONMOBIL ALASKA LNG, LLC FOR ACTIVITIES RELATED TO PREPARING FOR AND AJUDICATION OF AN ALASKA NATURAL GAS PIPELINE RIGHT-OF-WAY LEASE UNDER ALASKA STATUTE 38.35 AND ACTIVITIES ASSOCIATED WITH OTHER STATE AUTHORIZATIONS COORDINATED THROUGH THE STATE PIPELINE COORDINATOR'S OFFICE, DEPARTMENT OF NATURAL RESOURCES

This Memorandum of Agreement ("Agreement") is entered into between the Department of Natural Resources ("DNR") and ExxonMobil Alaska LNG, LLC ("Prospective Lessee") under the authority of the Right-of-Way Leasing Act, Alaska Statute 38.35 ("AS 38.35"). The purpose of this Reimbursement Agreement ("Agreement") is to establish procedures for the Prospective Lessee to reimburse the State of Alaska for reasonable costs incurred by the State related to the Prospective Lessee's application to be filed under AS 38.35 and associated State authorizations.

#### RECITALS

- 1. The Prospective Lessee is engaged in activities related to obtaining a state Pipeline Right-of Way ("ROW") Lease and other associated state permits and authorizations that would be required to transport natural gas by means of a pipeline from the North Slope of Alaska to market ("Project");
- 2. A state pipeline ROW Lease is an important element of this proposed Project and the Prospective Lessee and the DNR recognize the value in addressing matters associated with adjudicating a ROW Lease expeditiously to facilitate progress on this Project;
- 3. The Prospective Lessee and the DNR are prepared to initiate Pre-Application work in support of submission of an application for a ROW Lease on state land under AS 38.35;
- 4. The Prospective Lessee is also prepared to initiate pre-application work with other state agencies (coordinated through the SPCO) with respect to permits and other authorizations related to this Project;
- 5. It is to the benefit of the Prospective Lessee that the DNR have a multi-agency office prepared to receive and process applications for a ROW Lease, permits and other authorizations related to this Project;
- 6. The DNR State Pipeline Coordinator's Office ("SPCO") is the specific DNR agency assigned the responsibility to coordinate the processing of state approvals for this Project;
- 7. It is to the mutual benefit of the SPCO and the Prospective Lessee that state technical and resource employees work closely with the Prospective Lessee to facilitate activities related to Pre-Application and ROW Lease Application adjudication as well as processing of other necessary authorizations;
- It is to the mutual benefit of the SPCO and the Prospective Lessee that the SPCO conduct a coordinated project process among the state agencies and between the state, federal, and local agencies;

- AS 38.35.140 and AS 38.35. 145 specifically provide that a Prospective Lessee, Lease Applicant, or Lessee is to reimburse the DNR for reasonable costs based on an annual estimate of the projected costs (estimated budget) and Work Plans for this Project; and
- 10. As required by AS 38.35, the Prospective Lessee is prepared to reimburse reasonable costs incurred by state agencies for work related to this Project as provided in this agreement. The Parties acknowledge that any capital expenses that may be incurred by the Prospective Lessee as a result of a Highway Use Agreement portion of a ROW Lease are not covered under this Agreement. The Parties further acknowledge that costs and/or expense incurred by the SPCO with respect to the coordination of state approvals under a Highway Use Agreement are not covered under this agreement.

Therefore, the Prospective Lessee and SPCO on behalf of the DNR (collectively the "Parties" or individually a "Party"), enter into this Agreement as follows:

#### I. AGREEMENTS

- 1. <u>Applicability:</u> This Agreement covers the Prospective Lessee's reimbursement of SPCO costs from the date of final signature, (the "Effective Date") though the final decision and issuance or denial of a ROW Lease under AS 38.35, unless terminated as provided under Section II.
- 2. Annual Project Work Plan, and SPCO Estimated Budget [Exhibit B]: The Prospective Lessee and the SPCO will meet and review the Prospective Lessee's Annual Project Work Plan ("Work Plan"), broken out by quarter, no later than March 30<sup>th</sup> and discuss the SPCO anticipated General Scope of Work for each ensuing year. Based on the Work Plan, the SPCO shall develop an estimate of anticipated expenses ("Budget Estimate") for the ensuing state fiscal year. By June 15th of each year and prior to each quarter of the ensuing fiscal year (July 1 June 30), the SPCO and Prospective Lessee shall review the Budget Estimate for next quarter to determine whether adjustments to the Work Plan or Budget Estimate are needed, based on progress made and other circumstances. As needed, Exhibit B will be revised and attached to this agreement.
- 3. <u>Invoices:</u> The SPCO shall invoice the Prospective Lessee on a monthly basis or as otherwise agreed for all costs incurred in accordance with this Agreement. SPCO invoices shall contain detail in a format that allows the Prospective Lessee to determine whether the costs incurred are "qualified expenditures" as defined in AS 43.90 and 15 AAC 90. The Prospective Lessee shall pay undisputed amounts within thirty (30) calendar days of receipt of invoices in accord with Section II of this Agreement. Disputed billings must be elevated to the Commissioner of DNR within thirty (30) days of their original due date, and resolved consistent with Section II of this Agreement. If resolved in favor of the State of Alaska, said bills must be paid within thirty (30) days of the resolution.
- 4. <u>Costs:</u> The Prospective Lessee shall reimburse the SPCO for reasonable costs incurred by other state agencies working with the SPCO. Reimbursement of personnel costs shall be estimated on an annual basis in Exhibit B including a line item of the estimated administrative indirect costs.
- 5. <u>Availability of Public Information</u>: Considerable pre-application and permitting work already has been performed by SPCO, applicants and lessees for previous state pipeline projects. Data from these and other work projects that is public information and available at the SPCO may be used

by the Prospective Lessee. The Prospective Lessee and the SPCO will address the need for, and use of, available public data. The Prospective Lessee and the SPCO, through the quarterly review process, will jointly agree on the reimbursement of SPCO expenditures for state resources necessary in compiling requested data.

6. <u>Pre application and Application</u>: The Prospective Lessee will submit to the SPCO Pre-Application ROW lease information for this Project. This pre-application information is intended to assist the Prospective Lessee with completion and submission of an AS 38.35 ROW Lease Application by identifying needed information and data requirements for a complete application. Although additional information may be required after submission of an application, submission of the ROW Lease Application will initiate the formal ROW Lease Application adjudication and review process.

#### II MISCELLANEOUS PROVISIONS

- 1. <u>Agreement Form and Assignment Rights:</u> This Agreement is a reimbursement agreement. All previous understandings, agreements, or promises regarding reimbursement for SPCO activities under AS 38.35 directly associated with this Project are merged in this Agreement. The Prospective Lessee may assign the rights, privileges and obligations under this Agreement to a qualified entity or qualified entities that will have responsibility for the ROW Lease, subject to the approval of DNR.
- 2. <u>Termination and Amendments</u>: Either Party may terminate this Agreement upon ninety (90) calendar day's prior written notice to the other Party. This Agreement may only be amended in writing, and signed by each Party.
- 3. <u>Notices:</u> Any notice or communication required or allowed under this Agreement to any Party shall be given in writing and shall be deemed sufficiently given when sent by facsimile transmission (with retention of the printed automatic successful transmission report) or by certified mail (with return receipt requested and received) or personally delivered by a third party delivery service with a written reliable record of delivery retained, to the following addresses:

| ExxonMobil Alaska LNG, LLC | State Pipeline Coordinator's Office |
|----------------------------|-------------------------------------|
| 3201 C Street, Suite 505   | 411 W.4th Ave, Suite 2C             |
| Anchorage, AK 99503-3968   | Anchorage, AK. 99501-2343           |

Informal copies may be sent by electronic means such as email.

- 4. <u>Payments:</u> All payments herein specified are expressed in and shall be paid in United States of America currency by cable, wire, electronic transfer or check, without deduction of exchange, collection or other charges. The Prospective Lessee will need to contact Steve Schmitz with DNR Financial Services (907) 465-3787 to arrange electronic transfers.
- 5. <u>Enforcement</u>: If a Party fails to enforce a provision of this Agreement that Party has not waived its right to enforce such provision in the future.
- 6. Applicable Law: The laws of the State of Alaska shall govern this Agreement.

- 7. Audit Process: The Prospective Lessee is entitled to conduct, at its own expense, reasonable audits by auditors or accountants, of the books, records, and documents of the SPCO. The audits must be related to items on an invoice submitted under Section 14 of this Agreement, and must be at a place where such books, records, and documents are usually maintained and at reasonable times. The Prospective Lessee shall give written notice of an audit to the SPCO at least thirty (30) calendar days before the audit and not later than one (1) year after the close of the state fiscal year for which the books, records, and documents are sought to be audited. The Prospective Lessee may conduct an audit under this section only once per fiscal year, unless the Parties agree in writing to a different time frame because of special circumstances. The Prospective Lessee shall complete an audit under this section within sixty (60) calendar days after initiation. Within ninety (90) calendar days after completion of the audit, the Prospective Lessee shall notify the SPCO of the results of the audit and shall provide the SPCO a copy of the audit report if the Prospective Lessee requests adjustment or reimbursement of any invoice. The Commissioner of the Department of Natural Resources after consulting with the Prospective Lessee shall make the final determination if a cost/expense is appropriate and reasonable. Notwithstanding the foregoing, however, the SPCO will grant the Prospective Lessee access to its books, records and documents as may be necessary to allow the Prospective Lessee to comply with an audit request made pursuant to AS 43 .90.220(b).
- Designated Points of Contact: The designated points of contact for the SPCO and the Prospective Lessee shall attempt to timely resolve any disagreements regarding matters covered by this Agreement. The designated point of contact for the SPCO is Shannon Miller, Project Manager. The designated point of contact for the Prospective Lessee is Charlie Kominas, Attorney-in-Fact.
- 9. <u>Dispute Resolution</u>: Any disputes that arise under the Agreement will first be addressed and attempted to be resolved by the designated points of contact. Any disputes that remain after this process has occurred will be elevated for resolution between senior representatives of the Prospective Lessee and the State Pipeline Coordinator (SPC) of the SPCO. Any dispute that can not be resolved by the Prospective Lessee and SPC will be considered by the Commissioner of DNR who will consult with the Prospective Lessee prior to making a final decision.
- 10. <u>Term and Amendment</u>: Subject to the Annual Project Work Plan and budget provisions of Section II, the term of the Agreement shall expire 120 days after the date the DNR issues a final decision on a ROW Lease Application as provided in Section Iof the Agreement. If the decision is to issue a ROW Lease, following issuance of the ROW Lease and before the 120 day period expires, the SPCO and the Prospective Lessee may amend this Agreement to extend it or enter into a new agreement that addresses reimbursement of SPCO expenses for Project construction and operational oversight.
- 11. Execution: This Agreement may be executed in counterparts, all of which will be considered one and the same document, and will become effective when all counterparts have been signed by the authorized representatives of the below parties on the Effective Date.

The signatories to this Agreement warrant that they have the authority to enter into this Agreement.

This Agreement is effective as of the date of final signature, "Effective Date".

## Re: Letter to ADNR-SPCS - Review of Nikiski Capital Dredge Material Characterization SAP

Dear Ms. Murrell:

ExxonMobil Alaska LNG LLC (EMALL) on behalf of the Alaska LNG Project (Project) is requesting your review of the revised Sampling and Analysis Plan (SAP) for the Alaska LNG Project sediment sampling program at Nikiski to support future evaluation and permitting of potential capital (construction) dredging in Cook Inlet.

We would greatly appreciate feedback on the SAP by July 29<sup>th</sup> if possible so that we can incorporate any modifications and plan potential future work programs.

We appreciate and thank you for your cooperation. If you have any questions about the enclosed plan, please contact Jeff Raun at 907-929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

PEBruken

## Re: Alaska LNG Project

Dear «To Whom»:

The Alaska Gasline Development Corporation (AGDC) and affiliates of BP, ConocoPhillips, ExxonMobil, and TransCanada (together, Alaska LNG Project Participants) have commenced the Federal Energy Regulatory Commission's (FERC) pre-filing process for authorization to construct and operate the Alaska LNG Project. As part of this process, you are receiving information about the Alaska LNG Project because you either own land within or near proposed or alternative locations of new facilities, or have otherwise expressed interest in receiving information about this project. The purpose of this letter is to provide you with information on the Alaska LNG Project, the FERC pre-filing process, procedures for participating in that process, and contact information should you have additional questions.

## Alaska LNG Project Overview

The Alaska LNG Project Participants are proposing to construct one integrated liquefied natural gas (LNG) project with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular the Point Thomson Unit and Prudhoe Bay Unit production fields on the Alaska North Slope for export in foreign commerce. The proposed project includes the construction of a liquefaction facility in south central Alaska, an approximately 800-mile mainline gas pipeline, a gas treatment plant on the North Slope, and gas transmission lines connecting the gas treatment plant to the Point Thomson Unit and Prudhoe Bay Unit fields. The mainline gas pipeline will include at least five off-take points to allow for the opportunity for future in-state deliveries of natural gas.

Enclosed with this letter are a general project map and a project overview diagram reflecting the proposed facilities and their planned locations. Additional information on the project can be found at <u>www.ak-Ing.com</u>.

FERC authorizations are required to construct and operate these facilities. The Alaska LNG Project Participants are targeting to file a formal application for the Alaska LNG Project with the FERC in September 2016. FERC authorizations for the project and commencement of construction are anticipated in the 2018 – 2019 timeframe. Pursuant to this schedule, facilities would begin operating in the 2024 – 2025 timeframe.

## FERC Pre-filing Process

The FERC requires a collaborative pre-filing process to identify and resolve significant issues prior to applicants filing a formal application with the agency. A significant portion of the environmental review of the Alaska LNG Project will be completed as part of this pre-filing process. The FERC has accepted the request to initiate the pre-filing review process for the Alaska LNG Project under Docket No. PF14-21-000. Links to the Alaska LNG Project's current and future pre-filina materials can be found on FERC's website at http://elibrary.ferc.gov/idmws/docket search.asp (search "PF14-21" in the Docket Search field).

## Find Out More

The Alaska LNG Project Participants will hold public meetings regarding the Alaska LNG Project during October and November 2014 at a number of different locations in the vicinity of the proposed project facilities. Details about the community meetings will be provided through publication in local newspapers, the project website at <u>www.ak-Ing.com</u>, and other communication channels where necessary.

The FERC's website provides information about the agency's pre-filing procedures, citizen involvement, and basic landowner questions and answers, and can be accessed at <u>http://www.ferc.gov/for-citizens/citizen-guides.asp</u>. The FERC Office of External Affairs can be contacted at 866-208-3372 or 202-502-8004 to answer any additional questions about the procedures involved.

Thank you for taking the time to review this information and we look forward to communicating with you soon. For immediate questions, please contact Michael Nelson at 855-550-5445 or via email at info@ak-Ing.com.

Sincerely,

Center Ko

## RE: Homer Spit Marine Support Capabilities Business Begins ... Where Land Ends LNG Project Support Opportunities

Ms. O'Connor:

The City of Homer is very interested in partnering with the LNG project participants in creating a successful project on the Kenai Peninsula.

Whether it is short-term construction material mobilization or as a base for long-term operational/logistical support, the Homer City Council and I believe that the ice-free Port of Homer and the infrastructure that currently exists can play an important role in making this project profitable and contribute significantly to safe and effective project operations.

The City is currently in the planning stages of two major infrastructure projects that could benefit the LNG project (as we understand it to be). We believe that the expansion of our Deep Water Dock (to improve cargo handling/material off-loading capabilities) and the expansion of our Small Boat Harbor (which could provide berthing for tugs, spill response, and other support vessels) should be evaluated as potential solutions to LNG project needs. The City may be able facilitate local, state and federal funds needed to construct needed project support infrastructure.

Attached is a brochure that highlights the marine services that can currently be provided by the Homer Harbor, the Spit, and City as a whole.

The City of Homer would welcome any opportunity to discuss ways that we could assist you as plans for this important project develop.

Sincerely;

CITY OF HOMER

February 25, 2016

Ms. Betsy McGregor Environmental Manager Alaska Energy Authority Susitna-Watana Hydroelectric Project 813 West Northern Lights Boulevard Anchorage, AK 99503

RE: Acquisition of TK data from Susitna-Watana Hydroelectric Project

Dear Ms. McGregor:

My colleagues Mark Jennings and Lisa Gray had the pleasure of meeting you and Marie Steele on February 9, 2016 to discuss traditional knowledge (TK) studies completed by the Susitna-Watana Hydro Project and the TK needs of the Alaska LNG Project. As discussed during the meeting, the Alaska LNG Project has identified three communities for TK data collection that overlap with the communities previously surveyed by the Susitna-Watana Hydroelectric Project. The communities are Cantwell, Eklutna and Tyonek. In order to help minimize duplication of effort in those communities, the Alaska LNG Project wishes to acquire/share the TK data previously collected by the Susitna-Watana Hydroelectric Project.

The Alaska LNG Project data requested are as follows:

- The Susitna-Watana Hydroelectric Project TK report for the communities of Cantwell, Eklutna and Tyonek, as submitted to HDR;
- The complete Susitna-Watana Hydroelectric Project TK data for these communities which would consist of quotes in word.doc format.

The TK information provided will be included in Resource Report 5 (Socioeconomics) being submitted as part of the Alaska LNG Project's FERC license application. We plan to apply proper citations for TK information provided by the Susitna-Watana Hydro Project.

We appreciate the assistance and cooperation of the AEA in considering our request. We look forward to hearing from you.

Sincerely,

1

Charlie Kominas Alaska LNG Safety, Security, Health, and Environment Manager ExxonMobil Development Company For and on behalf of ExxonMobil Alaska LNG LLC

#### Re: ALASKA LNG FIELD STUDIES PROGRAM - Wetlands Determination Protocol

Dear Mr. Holley,

BP, ConocoPhillips, ExxonMobil, and TransCanada are currently developing a potential project, known as the Alaska LNG Project, to treat, transport, and deliver natural gas from the Alaska's North Slope to a new liquefied natural gas (LNG) plant and marine terminal on Cook Inlet (the "Project"). The proposed Project includes the following major components in Alaska: an LNG Plant, a Gas Pipeline, a Gas Treatment Plant (GTP), a Prudhoe Bay Unit (PBU) Gas Transmission Line, and a Point Thomson Unit (PTU) Gas Transmission Line. In October 2013, the Project selected a site in the Nikiski area on the Kenai Peninsula as the preferred location for a proposed natural gas liquefaction plant and marine terminal. Pipeline routing definition from the Prudhoe Bay Unit to the plant location is ongoing.

The Project is planning summer field studies to analyze existing environmental conditions along the proposed project footprint and gather information to aid in facility location. Summer field studies will include wetlands mapping and field data collection and verification. The intent is to utilize this wetlands data for the applicable Section 404/10 permits and in the NEPA process, which the USACE will be party to. We submit the attached Wetlands Determination Protocol for your review and endorsement.

We appreciate and thank you for your cooperation. If you have any comments, questions or information requests, please contact Adrienne Rosecrans at (832) 624-2722.

Sincerely,

Charlie Kominas

Alaska LNG Project 16945 Northchase Drive, DEV-GP4 Houston, Texas 77060

## Re: Review of Wetland Studies Data Gathered by the Alaska Pipeline Project and the Alaska LNG Project

Dear Mr. Holley:

On behalf of the Alaska LNG Project (Project), this letter and its attachments seek your concurrence regarding data to be used in the regulatory approval process for the Project. As discussed in previous meetings with the US Army Corps of Engineers (USACE), a considerable body of work has been compiled for portions of the Project footprint north of Livengood, Alaska, including data that is common to a previous gas project (Alaska Pipeline Project). The available body of work includes information gathered by the previous project as well as information gathered during supplemental surveys conducted by the Project in 2013.

Some of the previously gathered data are no longer applicable or within the proposed Alaska LNG Project footprint; therefore the Project has developed and enclosed the following: an overview of the Wetlands Program to explain program objectives and summarize study results (Attachment A); two tables, one which presents all wetlands that intersect watersheds crossed by the potential Project footprint north of Livengood and another that summarizes wetland types by watershed north of Livengood (Attachment B); and two mapbooks (one for the Mainline Pipeline and one for the Point Thomson Pipeline) illustrating the locations of all wetlands listed in the tables (Attachment C).

The Project requests USACE's review and endorsement of this data set so that it may be used in the upcoming Federal Energy Regulatory Commission application and resulting Environmental Impact Statement. If you have any questions or require further information, please contact Adrienne Rosecrans at (832) 624-2722.

Sincerely,

ul Meder

Ruben Medrano Alaska LNG Regulatory Lead For and on behalf of ExxonMobil Alaska LNG LLC

 AK LNG Wetland Delineation Letter (UNCLASSIFIED)

 Date:
 Friday, January 30, 2015 10:10:29 PM

 Attachments:
 SPN-2010-45.pdf AK LNG WD Review. Memo 1-30-2015.docx Jurisdictional Determination General Concepts.pdf Example of Aquatic Resources.xlsx

Classification: UNCLASSIFIED Caveats: NONE

Hi Jon:

We have completed our review of the wetland delineation of the AK LNG project from Point Thompson to Prudhoe Bay to Livengood, Alaska prepared by the applicant dated 17 July 2014.

We concur that the wetland boundaries within the study area have been established in accordance with the Corps of Engineers 1987 Wetland Delineation Manual and its 2007 regional supplement for Alaska. The following is an overview of our findings:

\* Please find attached our special public notice that will give you more details on the components of your wetland delineation.

\* The wetland delineation data sets submitted by the applicant successfully identifies the waters of the U.S. (WOUS) contained within the study area with the exceptions described in the attached Memorandum for the Record dated 30 January 2015.

\* Our review was limited to the identification and delineation of WOUS, which is central to our jurisdictional determination. A function and values assessment was not included in this evaluation.

\* We request that your data be organized as per the attached spreadsheet which will allow us to download your dataset into our National Database (ORM2). As you can see in the spreadsheet, there are columns for waters name, water types, acreage, coordinate, local names, among others. Water types are defined as TNW, TNWWD, RPW, RPWD, and RPWWN; we are attaching a pdf to provide more details on how to separate water types (which also includes wetlands). We recommend you use the 8HUCs to determine the waters name, and the HUC10 to determine the local waters. Because the attached spreadsheet will not allow you to enter two equal waters names, it is recommended that you use the water type as part of the water name (Colville River-TNW for the river and Colville River-TNWW for the wetlands adjacent to the river). Remember that for all TNWs you will need to provide a rational on why they are navigable in fact(NIF). This rationale provides an explanation as to why a water body sustains navigation and further how a stream flows into a Section 10 water. Please review the information attached and let us know if you would like to discuss this further.

Hope this is helpful,

Janet Post Regulatory Specialist US Army Corps of Engineers Regulatory District Office, JBER 907.753.2831 http://www.poa.usace.army.mil/Missions/Regulatory.aspx From: Rea, Caryn /SEC Sent: Wednesday, May 20, 2015 1:10 PM To: Romero, Mary R POA; Jewel Bennett (jewei bennett@fws.gov); martin.gavle@epa.gov Cc: Antonakos, Elena A Subject: Wetland Protocols

#### Hello everyone

Attached are the wetlands protocols the Alaska LNG is following for mapping wetlands in the proposed project area. We had a good discussion about this a couple of weeks ago; subsequently we received a request from Mary to forward these along to all of you. Please cascade through your organization as appropriate. Prior to my joining the Alaska LNG team in mid-October 2014, the permits staff met with Janet Post to review the protocols – based on input received, the protocols were revised to the version you see in this attachment. If there are any glaring omissions from the protocols that you think might be a problem for us as we move toward development of an ASA, please do let us know.

1

Otherwise, the team will be moving forward with these protocols this season, to be consistent with prior years. Best, Caryn

Sr. EIS Advisor AK LNG Project 3201 C Street, Suite 505 Anchorage, AK 99503

DEPARTMENT OF THE ARMY ALASKA DISTRICT, U.S. ARMY CORPS OF ENGINEERS REGULATORY DIVISION P.O. BOX 6896 JBER, AK 99506-0698

JUL 08 2015

Regulatory Division POA-2015-329

Ms. Caryn Rea Exxonmobil Alaska LNG LLC 3201 C Street, Suite 505 Anchorage, Alaska 99503

Dear Ms. Rea:

This is in regards to the 2015 Wetland Determination Field Survey Protocols' associated with the natural gas pipeline known as the Alaska Liquid Natural Gas (Alaska LNG) project. The proposed project is located entirely within the state of Alaska and follows the Dalton and Parks Highways for the majority of the route, and crosses Cook Inlet to Nikiski.

Based on the Corps' review of the field protocols report provided on May 20, 2015, and other information made available to the Corps, these are the main comments:

- 1. Comments on the wetland delineation protocol:
  - (1) Please provide a map overlaying the 800-mile pipeline and the Nowacki et al. ecoregions (shapefile CD attached). Although LNG may use geographic spreads (segments) for planning purposes, the Corps will require quantification of wetland impacts by ecoregion and watershed units. Acreage of wetland impacts should be grouped by wetland types within specific ecoregions and 8 digit HUC watershed units. Wetland impact acre-calculations using the ecoregion/watershed approach will be used in the alternative analysis, development of the ROD, data entry in ORM-2, and to determine wetland mitigation (avoidance/minimization/compensatory mitigation) at ecoregion/watershed scales.
  - (2) In section 2.2. (Project Area), LNG identified two delineation zones along the 800-mile pipeline: the mapping corridor and a narrower area described as the field survey corridor, which is also the Right of Way/Impact Area. The mapping corridor is a 2,000-foot area with 1,000 feet on either side of the proposed alignment centerline.

The field survey area is the 300-foot impact area with 150 feet on either side of the proposed alignment centerline. During this field season, LNG plans to concentrate its field data collection and ground truthing only within the 300-foot field survey corridor. Field data collection and ground truthing should occur for the complete 2000-foot mapping corridor. Data outside the 300-foot belt (right of way) is critical to determine jurisdiction and potential changes in project configuration.

- (3) The terminology used in the wetland delineation report and associated datasets shall be in accordance with the 1987 Wetland Delineation Manual and the 2007 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Alaska Region (2007 Alaska Regional Supplement). In the 3.1. Overview section, LNG stated that, 'other non-wetland waters of the U.S. under Corps jurisdiction include deepwater aquatic habitats, unvegetated ponds, river channels, and other special aquatic sites as non-wetlands. The 1987 manual refers to non-wetlands as drier areas or uplands (1987 Manual-page 9, page 11:28.a.). A more appropriate term for deepwater aquatic habitats, unvegetated ponds, river channels, etc. wetter than wetlands is 'other aquatic habitats' leaving the term 'non wetlands' to represent only uplands.
- (4) Follow the Alaska District Special Public Notice 2010-45 when developing the Preliminary Jurisdictional Determination Report (see attached). Data should be provided in a digital GIS format to expedite review. Spatial datasets (ortho-rectified and geo-reference imagery, contour lines, vector data for streams/wetland polygons, sampling sites GPS, etc.) will be required by the Corps to generate the approved jurisdictional determination.
- (5) The Wetland Determination Data Form used in the field must follow the same order as the one provided in the 2007 Supplement and provide specific location (latitude and longitude) and general conditions information. Photopoints should also provide information on their location (latitude and longitude) in the landscape and a brief description of general conditions, vegetation, landform, local relief, slope, natural or anthropogenic disturbances, etc.
- (6) Please ensure wetland delineation and aquatic site assessment sampling points, as well as ground reference points/field targets contained accurately geo-referenced GPS points. The Corps may ask for any premapping information and reference sources used in generating the wetland delineation if such information is not easily accessible through public venues.

- (7) The wetland delineation report must include a section describing the criteria used to extrapolate sampled wetland/non-wetlands to other mapped areas based on vegetative aerial signature and other imagery elements (imagery color, texture, landscape position, etc.). Such section should include comparisons and reference photos of sampled wetlands, field targets, and vegetative signature imagery.
- (8) Section 3.3. Field target selection: when wetland/non-wetland components are too closely associated to be easily delineated or mapped separately, wetland/non-wetland mosaics are to follow the field protocols described on the 2007 Alaska Regional Supplement (page 98-99). Be mindful that wetland/non wetland mosaics are atypical and considered difficult wetland situations.
- (9) Areas ≤6.6 ft mean annual depth that support only submergent aquatic plants are vegetated shallows, not wetlands.
- 2. Review of the wetland functional assessment protocol;
  - (1) Magee and Hollands (1998) was developed for the glaciated northeast and mid-west and can be used as an example of a rapid assessment procedure. For Alaska it needs to be modified or redefined to make it applicable to the specific subregions where the project would be located by adding, deleting or modifying the functions, adjusting variables, and variable conditions, or by making other changes appropriate for the location based on ecological conditions.
  - (2) Considering the extent of organic flats (peatlands/peat bogs) in Alaska and clear functional differences between organic flats and mineral flats (See Conceptual Framework, table 1. Brinson et al.1995), we are asking that you please separate organic flat wetlands from mineral flat wetlands. Organic flats may be associated to depressions filled with peat, whereas mineral flats are mainly associated to extensive relic lake bottoms or floodplain terraces without large peat accumulation.
  - (3) If the proposed project would include discharges on tidal/estuarine fringe wetland, the aquatic site assessment (ASA) should be one of the hydrogeomorphic classes included within the ASA.

- (4) Eight functions were identified to evaluate each HGM class. Identify whether a particular function is indeed performed by the HGM class evaluated at the ecoregion scale. If a representative HGM class does not perform a particular function in natural conditions, it is not appropriate to evaluate such function. The aquatic site assessment should provide a rationale on your thought process on the selection of functions (for example, explain whether a hydrogeomorphic wetland class underlay with permafrost will provide groundwater recharge functions, etc.).
- (5) Use different titles for the form used for wetland delineation and for the form used to gather data for the aquatic site assessment (refer to Appendix A, page 4 of the 2015 Field Protocols). Also, provide latitude and longitude data for each aquatic site assessment sites.
- (6) We concur with your statement that the vegetation, soils, hydrology, and landscape variables presented in the 'Aquatic Site Assessment' field form needs to be adapted and defined in relation to each function. An illustration of the relationship between functions and variables by ecoregions will be needed prior to incorporating them into the assessment model and generating the functional indices.
- (7) Please coordinate with the Corps as you generate your functional assessment model and develop the Functional Capacity Index for the various HGM wetland classes.

Please contact Mary Romero via email at mary.r.romero@usace.army.mil, by mail at the address above, by phone at (907) 753-2773, or toll free from within Alaska at (800) 478-2712, if you have questions or concerns. Visit our web site at www.poa. usace.army.mil/Missions/Regulatory.aspx for additional information about our Regulatory Program.

Sincerely,

lR. A.

Mike Salyer North Branch Chief

## Re: POA-2015-329, Alaska LNG Project Wetland Delineation and Functional Assessment Protocol Response to July 8, 2015 Letter

Dear Mr. Salyer:

Thank you for your comments and suggestions regarding Alaska LNG's 2015 Wetland Determination Field Survey Protocols provided to U.S. Army Corps of Engineers (USACE) staff on May 20, 2015. We have reviewed your comments and offer some clarifications, as well as additional information for discussion with your team in the near future. In addition, we have provided a response to the USACE's comments on an aquatic site assessment/functional assessment method for consideration.

- 1. Response to USACE comments on the wetland delineation protocol:
  - (1) We have received the ecoregion files from the USACE and will prepare tables (and an overview map) that summarize the temporary and permanent impacts to waters of the US, including wetlands, using the ecoregion breakdown as well as by 8 digit HUC watershed unit. We expect to have the required information in the Draft 2 Resource Reports which will be filed in early 2016.
  - (2) Alaska LNG is not planning to conduct ground truthing outside the 300foot study corridor. However, the area between the 300-foot study corridor and the 2,000-foot wide mapping corridor will be revised based on information gathered during ground truthing efforts to ensure wetlands within the larger mapping corridor are correctly identified. Alaska LNG believes that this method provides accurate and sufficient data for

jurisidictional determinations and comparison of route alternatives, similar to other recent pipeline and linear projects in Alaska, which used the mapping data identified in the 2,000-foot corridor rather than conducting field surveys of each alternative. This is primarily due to the fact that upland or wetland polygons ground truthed within the 300-foot study corridor frequently extend into the 2,000-foot corridor. Field data collection for the entire 2,000-foot wide corridor would require multiple field seasons and an unnecessary and unprecedented burden on Alaska LNG.

- (3) As stated in the Alaska LNG wetland determination plan, the terminology contained in the USACE's 1987 Wetland Delineation Manual and 2007 Regional Supplement will be followed, including the recommendation for classification of non-wetlands as indicated in the USACE's July 8 letter.
- (4) Alaska LNG provided the field data sheets, GPS and GIS files of wetland mapping conducted from 2010 through 2013 for the Project footprint north of Livengood in October 24, 2014. The data were provided in a digital GIS format as described in the USACE letter and it is our intent to provide similar level of detail from the surveys conducted in 2014/2015 for the Project footprint south of Livengood. We will follow the requirements of SPN-2010-45 as outlined in your letter for filing the preliminary jurisdictional determination report.
- (5) Alaska LNG is currently collecting the required wetland determination data referenced on the Data Form provided in the 2007 Supplement, including the latitude and longitude of the locations and on associated photographs. A brief description of general site conditions is also included on the Data Form.
- (6) The field data collection locations, including photographs, include the required GPS information.
- (7) A description of the criteria used to extrapolate sampled wetlands/nonwetlands will be provided in the wetland delineation report. This information was also provided for the data north of Livengood that was supplied to the USACE on October 24, 2014 for their jurisdictional review of the data north of Livengood.
- (8) Alaska LNG will be cognizant of difficult wetland situations as guided by the 2007 Alaska Regional Supplement.
- (9) Areas ≤ 6.6 feet mean annual depth that support only submergent aquatic plants will be referred to as 'vegetated shallows' not wetlands.

## 2. Response to USACE review of the wetland functional assessment protocol:

Alaska LNG is developing an aquatic assessment/functional assessment method to provide to the USACE for their review and concurrence in the near future. The points provided in the USACE letter will be included in our proposed methodology. Please note that the title of our aquatic site assessment (ASA) form will be changed to distinguish it from the wetland determination form. Alaska LNG will coordinate with USACE as the functional assessment model and Functional Capacity Index are refined.

We look forward to meeting with you to review our comments and ensure that we provide the USACE with sufficient information to process future permit applications for the Alaska LNG Project. In the interim, if you have any questions about the content of this letter, please contact Caryn Rea at (907) 229-8972.

Sincerely,

an Munter

## **Re:** Alaska LNG's Aquatic Site Assessment Comparison Analysis and Recommended Methodologies

Dear Mr. Salyer:

Further to the U.S Army Corps of Engineers (USACE) recommendations in a letter dated 8 July 2015, the Alaska LNG Project (Project) has developed a proposed methodology for the implementation of an Aquatic Site Assessment (ASA). The Project compared eight different functional assessment methods previously used in Alaska for various projects (or proposed projects) to arrive at a method using a proposed three-tiered approach:

- 1. Tier 1 includes compiling existing Project data and landcover classifications (where available) to prepare a draft of wetland functional classes expected to be encountered along the proposed Project route.
- Tier 2 involves modifying and employing the Rapid Aquatic Assessment Method (RAAM), Alaska Wetlands Assessment Method (AKWAM), and Aquatic Functional Rapid Ranking System (AFRRS) methods to capture the variations in wetland function that occur in the eight ecoregions that comprise the Project area. The modified methodologies will be used to assign standardized functional capacity rankings to the wetland functional classes identified in Tier 1.
- 3. Tier 3 incorporates existing available GIS datasets to assign geographic context to the standardized functional capacity rankings established in Tier 2. An example of a Tier 3 application would include using recreation or subsistence-use spatial data to identify aquatic resources that may support these activities.

Please see the attached document entitled *Aquatic Site Assessment Methodology Review and Recommendations* for additional information regarding the Project's analysis, conclusions and recommendations.

We look forward to meeting with you to review our recommendations and ensure that the ASA will contain sufficient information to process future Project permit applications. In the interim, if you have any questions about the content of this letter, please contact Caryn Rea at (907) 929-4106 or (907) 229-8972.

Sincerely,

Mg n

March 10, 2016

Mr. Ryan H. Winn North Section Chief, CEPOA-RD U.S. Army Corps of Engineers Post Office Box 6898 JBER, AK 99506-0898

## Re: Wetlands Mapping Protocols for the Alaska LNG Project POA-2015-329 and 2015 Wetland Field Study Report

Dear Mr. Winn:

Please find enclosed the 2015 Wetland Field Study Report prepared by AECOM for the Alaska LNG Project (Project). This is the third annual wetlands report provided to the U.S. Army Corps of Engineers (USACE). Previous reports were submitted on October 24, 2014, and May 20, 2015, to cover the 2013 and 2014 field seasons, respectively. After the 2016 summer field season, the Project will submit a final Wetlands Delineation Report that encompasses all work performed through 2016 and fully addresses all review comments received from the USACE.

As described in previous correspondence (i.e., letters accompanying the 2013 and 2014 reports), the Project has been applying a USACE-approved mapping protocol that involves a three-tiered approach.

- The pre-mapping component uses digital ortho-rectified and geo-referenced true color aerial photography at a 1.6-foot pixel resolution from multiple sources including the U.S. Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) digital datasets, Light Detection and Ranging (LiDAR)-generated topographic contours, and Natural Resources Conservation Service (NRCS) soil surveys. Field targets are then selected from the pre-mapping effort to verify both reference polygons and areas with potential mapping uncertainties to better define the wetland boundaries and NWI classifications.
- 2. Field targets identified through the pre-mapping effort are surveyed in the field using sample plots and wetland data forms, then confirmed for accuracy against the mapped classifications.
- 3. The maps are revised to incorporate the field data and then finalized.

This mapping protocol is consistent with the Federal Wetland Delineation Offsite Method for identifying and delineating wetlands. Field protocols are consistent with both the 1987 Wetland Delineation Manual and the 2007 Alaska Regional Supplement. This methodology is used by both NRCS and USACE for wetland/jurisdictional determinations both in Alaska and the lower 48 (subject to the local Regional Supplement) and has been accepted by the Alaska District per email from Janet Post, dated January 30, 2015, and letter from Mike Salyer dated July 8, 2015). Enclosed please find the 2015 Wetland Field Study Report and a portable hard drive with digital data including the wetland data forms, field photographs, and GIS data.

We respectfully request concurrence that the wetland mapping protocols employed by the Project and described in the 2015 Wetland Field Study Report remain acceptable to the USACE.

We hope to meet with you in the near future to discuss the 2015 Wetland Field Study Report. If you have any questions about the content of this letter, please contact Caryn Rea at (907) 229-8972 or via email at caryn.rea@exxonmobil.com.

Sincerely,

Karen Wuestenfe

DEPARTMENT OF THE ARMY ALASKA DISTRICT, U.S. ARMY CORPS OF ENGINEERS REGULATORY DIVISION P.O. BOX 6898 JBER, ALASKA 99506-0898

May 2, 2016

Regulatory Division POA-2015-329

Alaska LNG Attn: Ms. Karen Wuestenfeld 3201 C Street, Suite 506 Anchorage, Alaska 99503

Dear Ms. Wuestenfeld:

This letter is in response to your March 10, 2016 request for a Department of the Army (DA) review and concurrence of the third annual wetlands report. It is our understanding that Alaska LNG (AK LNG) intends to submit the final Wetland Delineation Report after the 2016 sampling season. The 2015 wetlands report included the following survey areas: Revision (REV) B route from Nikiski milepost (MP804), northwest across Cook Inlet to Beluga (MP 764) then continuing north along the Rev B route into the Brooks Range foothills where the northern extent of field data collection concluded near MP 86. Your project has been assigned DA number POA-2015-329, which should be referred to in all correspondence with us.

Based upon our review of the information you provided which is currently underway, we wish to provide you with the following comments and considerations which are based upon your latest submittal:

- 1. The mapping procedures and protocols provided in your wetlands report appear to be compliant with the requirements stated within Special Public Notice 2010-45 Corps of Engineers Regulatory Program Consultant-Supplied Jurisdictional Determination Reports.
- Regarding the map projections, it appears AECOM used GCS NAD 83. When we compare the acreage values with Alaska Albers NAD 83, the amount was slightly higher. On a small scale, this would not make much difference but with a project of this scale, there is concern that the additive effect of the totals would result in a large impact area. Please use Alaska Albers NAD 83.
- 3. Is it possible to remove or separate previously delineated areas into a second data layer so that the GIS current layer is directly associated with the current project proposal? [Note: see the pipeline alignment north of Cook Inlet and at Nikiski There are multiple sections of linear features that aren't defined are these previous routes that were eliminated?]
- 4. Cook Inlet is flagged as "N/A" among several other areas along the proposed pipeline route. Please provide clarification on the "N/A" designation and why

these areas are not characterized according to uplands, wetlands, navigable waterway, etc.

- 5. Data points were identified as being wetland in the attributes table, "N/A" on the HGM field and "U" for the Cowardin class (i.e., W85TI018). Understandably, some areas can be field verified as occurring differently from NWI but the current example is confusing.
- 6. Ensure data sheets are present for field data points (i.e., W85IN024\_OP and \_OP2). A field sheet exists for W85IN024 however there were no additional forms to support findings for the two alternate points with the \_OP name extensions. Several of these data points exist for different areas. Clarification of nomenclature and field forms (if applicable) are appreciated.
- Additionally, W84HT023\_OP is indicated as PFO yet attributes table has "N/A" in primary vegetation type. Also, there is no correlating field form to review for clarification. In contrast, W84HT023 is designated as PEM in the attribute table. This classification is supported based upon the vegetation types identified in the field form.
- 8. Additional efforts are needed to further increase field visibility within the reported 220 (noncontiguous) miles of pipeline corridor currently identified as inaccessible or outside range of feasible accessibility. Based upon responses received from EXP Energy Services, Inc., some of these areas (~49,000 acres) are inaccessible due to the unauthorized right of entry (ROE) agreements with landowners. What is AK LNG's plan to work with these landowners to obtain ROE in order to close data gaps in field data collection? Assuming efforts will be ongoing, please continue to keep the Corps updated on your progress as inaccessible sites are removed or potential alternative strategies, if applicable, to address areas deemed physically inaccessible.

Because the review is ongoing at this time, we will continue to provide feedback as needed based upon our findings as we believe they will provide future benefit towards completion of the full delineation report. If you have questions or to request a paper copy of the DA permit application, please contact me via email at sandy.p.gibson@usace.army.mil, by mail at the address above, by phone at (907) 753-2877, or toll free from within Alaska at (800) 478-2712. For more information about the Regulatory Program, please visit our website at http://www.poa.usace.army.mil/Missions/Regulatory.aspx.

Sincerely,

Sandy P. Gibson Project Manager

## Re: Aquatic Site Assessment Pilot Program for the Alaska LNG Project POA-2015-329

Dear Ms Gibson:

Please find enclosed the 2016 Aquatic Site Assessment (ASA) Pilot Program for the Alaska LNG Project (Project). This is a follow-up to the May 11, 2016, meeting in which the Project staff provided an overview of the Project's Aquatic Site Assessment Methodology Review and Recommendations. This document compares 8 different assessment methods that have been used previously on projects reviewed by the Alaska District, U.S. Army Corps of Engineers (USACE).

As discussed during the meeting, the Project is proposing to perform preliminary assessments on wetlands in the three major ecoregions crossed by the Project as part of a pilot program. The pilot program will provide information regarding both the usefullness and appropriateness of using either or both methods in relation to the wetlands impacted by the Project and the various ecoregions being crossed. We are proposing the use of two different methods (with modifications) to see if one is better suited for different ecoregions of the state than the other. The two methods are ADOT&PF's Alaska Wetland Assessment Method (AKWAM) and ABR's Aquatic Function Rapid Ranking System (AFRRS).

Each method will be modified to include wetland characteristics outside of the major ecoregions that each was originally developed for and applied to. AKWAM was originally developed for interior Alaska (Intermontaine Boreal) and AFRRS was originally developed for the North Slope (Polar/Arctic Tundra). Both methods will have to be modified for the other two major ecoregions including Southcentral (south of the Alaska Range known as Alaska Range Transitional which includes the Cook Inlet).

We respectfully request concurrence that the proposed ASA pilot program is acceptable. The results of the modifications and pilot program will be shared with USACE at the conclusion of the program in the Fall of this year (2016). If you have any questions about the content of this letter, please contact Caryn Rea at (907) 229-8972 or via email at caryn.rea@exxonmobil.com.

Sincerely,

21

## Re: Letter to USACE - Review of Nikiski Capital Dredge Material Characterization SAP

Dear Ms. Gibson:

ExxonMobil Alaska LNG LLC (EMALL) on behalf of the Alaska LNG Project (Project) is requesting your review of the revised Sampling and Analysis Plan (SAP) for the Alaska LNG Project sediment sampling program at Nikiski to support future evaluation and permitting of potential capital (construction) dredging in Cook Inlet.

We would greatly appreciate feedback on the SAP by July 29<sup>th</sup> if possible so that we can incorporate any modifications and plan potential future work programs.

We appreciate and thank you for your cooperation. If you have any questions about the enclosed plan, please contact Jeff Raun at 907-929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

PEBrukum

## Ex on Mobil

May 15, 2014

Captain Paul Mehler III Captain of the Port, Western Alaska Sector Anchorage G-Wing Bldg 49000 Army Guard Road JBER, Alaska 99505-0727

Re: Letter of Intent Alaska LNG Project

Dear Captain Mehler III:

ExxonMobil Alaska LNG, LLC, ConocoPhillips Alaska LNG Company, and BP Alaska LNG LLC (the "Alaska Parties") are working together with other parties, including TransCanada Alaska Midstream LP and the Alaska Gasline Development Corporation, to develop the Alaska LNG Project ("Project"), which would consist of a liquefied natural gas ("LNG") terminal including natural gas liquefaction, storage and marine loading facilities ("LNG Plant"), a natural gas treatment plant, and natural gas transport pipelines. The Project is being developed for the purpose of liquefying supplies of natural gas from Alaska for export to foreign markets. The Alaska Parties are working to construct, own, and operate the LNG Plant, which would be an approximately 20 million metric tons per annum ("MTA") LNG facility near Nikiski, Alaska. The LNG Plant would be sited on 400 to 800 acres of land within the Kenai Peninsula Borough north of Nikiski and Kenai through the acquisition of property from private, commercial, and borough landowners. In accordance with U.S. Coast Guard ("USCG") regulations at 33 CFR § 127.007, the Alaska Parties are pleased to submit the following information about the Project.

## 1. Name, address and telephone number of the owner and operator.

The LNG Plant will be owned and operated by the Alaska Parties. The permanent address and telephone number for the owner and operator of the LNG Plant has not been established yet. In the interim, please contact the following representative of the Alaska Parties:

Charlie Kominas Environmental, Regulatory and Land Manager Alaska LNG Project 3201 C St., Suite 506 Anchorage, AK 99503 (832) 624-2816

Edward G. Stokes, Marine Project Manager for the Alaska LNG Project, will also be supporting the USCG engagement effort.

## 2. The name, address, and telephone number of the Federal, State, or local agency having Jurisdiction for siting, construction, and operation.

The lead federal agency with jurisdiction over the Project is the Federal Energy Regulatory Commission ("FERC" or "Commission"). FERC will have the responsibility of reviewing the environmental and safety aspects of the Project and preparing the environmental documents required by the National Environmental Policy Act of 1969 ("NEPA"). The mailing address and telephone number for general inquiries is:

Federal Energy Regulatory Commission Lauren O'Donnell, Director OEP, Division of Gas - Environment and Engineering (PJ-11) 888 First Street NE Washington, DC 20426 Telephone: (202) 502-8325 lauren.odonnell@ferc.gov

In addition to the environmental reviews by the FERC for authorization of the Project under Section 3 of the Natural Gas Act ("NGA"), other federal, state, and local agencies participate in the overall regulatory process such as the U.S. Department of Energy ("DOE") for authorization to export LNG to both Free Trade Agreement and Non-Free Trade Agreement countries, the U.S. Army Corps of Engineers ("USACE") for activities affecting wetlands and waterways, the Alaska Department of Environmental Conservation ("ADEC") for air emissions and water discharge permits, the Kenai Peninsula Borough Planning Department, and other agencies as applicable.

#### 3. Name, address, and telephone number of the facility

The permanent address and telephone number for the LNG Plant has not been established yet. In the interim, please contact the following representative of the Alaska Parties:

Charlie Kominas Environmental, Regulatory and Land Manager Alaska LNG Project 3201 C St., Suite 506 Anchorage, AK 99503 (832) 624-2816

#### 4. The physical location of the facility

The LNG Plant site is located in a primarily industrial area in proximity to the existing ConocoPhillips LNG Plant near Nikiski, Alaska, on the eastern shore of Cook Inlet, approximately 100 nautical miles from the entrance to Cook Inlet from the Gulf of Alaska. Cook Inlet is approximately 180 nautical miles north to south. The LNG Plant site is located as shown in Attachment 1, Figure 1. The site is currently accessible by road and is located in proximity to the Kenai Spur Highway as shown in Attachment 1, Figure 3.

#### 5. A description of the facility

The LNG Plant site will include the structures, equipment, underlying access rights and all other associated systems for pre-processing and liquefaction of natural gas, and storage and off-loading of LNG, including marine terminal facilities and auxiliary marine vessels used in support of marine terminal operations (but excluding LNG carriers). The LNG Plant will contain three (3) liquefaction trains that combined will process approximately 20 MTA of LNG. Three (3) 160,000 cubic meter (m<sup>3</sup>) tanks will be used to store the LNG. The LNG Plant will be capable of accommodating two (2) LNG carriers.

The site location of the LNG Plant is shown in Attachment 1, Figures 1 - 3. Construction is projected to begin in the 2018/2019 timeframe with proposed facilities placed into service sometime in the 2024/2025 timeframe.

The LNG Plant will include the following features:

<u>Inlet Receiving Station</u>: Feed gas would be transported to the site boundary via a proposed 42-inch gas pipeline. The Inlet Receiving Station would include an incoming interconnect pipeline, a pig receiver, a filter/separator, custody transfer meter(s), a pressure regulator, an emergency shutdown valve, and a gas analyzer.

<u>LNG Trains</u>: Each individual LNG train would include the following essential facilities: Separators, Dehydration and Mercury Removal Beds, Compressors, Distillation Columns and Heat Exchangers.

<u>LNG Storage</u>: Three full containment LNG storage tanks each with a net working capacity of approximately 160,000 m<sup>3</sup> would store the LNG product. These LNG storage tanks would be designed to meet the requirements of the National Fire Protection Association ("NFPA") Standard 59A, regulations of the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration ("PHMSA") contained in 49 CFR Part 193, and other applicable standards.

LNG Vessel Loading: To accommodate LNG vessels and to minimize interference with existing ship channel traffic, the LNG loading terminal and berth pocket will be situated in Cook Inlet to enhance the safe and efficient loading of LNG vessels. Any required dredging would be done in accordance with the relevant guidelines and in coordination with the USACE. The berth size, location, and orientation would be designed to optimize a number of criteria, primarily to ensure safe navigable approach and departure conditions, a safe mooring environment, proximity to the channel, and safe distance from the influence of passing vessels. Other influences include water depth and optimization of the cryogenic piping arrangement. To achieve the currently proposed maximum 12,500 cubic meters per hour (m<sup>3</sup>/hr.) loading rate for one LNG vessel, the main cryogenic LNG line from the LNG tank to the loading platform would be optimally sized. LNG loading arms would be used to transfer the LNG from the platform to the vessels. A vapor return arm for transfer of the boil-off gas from the vessels to the LNG facilities and a spare hybrid liquid / vapor arm would also be supplied.

<u>Flare System</u>: The pressure relief and flare system would include shore side flares and would be designed to safely and reliably dispose of streams that would need to be vented during startup, shutdown, LNG vessel gas-up operation, plant upsets, and emergency conditions.

<u>Buildings</u>: The LNG Plant would include separate buildings for administration, control room, and workshop functions.

<u>Power Supply</u>: The majority of the LNG Plant's power requirements for liquefaction would be generated by multiple gas turbines on site for each LNG train. Power from the turbines would also run motors for LNG loading pumps and boil-off gas compressors, lighting, and other items.

<u>Water Supply</u>: The LNG Plant would utilize air coolers as the base case. Water cooling using a closed loop system will be studied during the pre-front end engineering and design (pre-FEED) stage. Prior to filing the Follow-on Waterway Suitability Assessment (WSA) and FERC application, a decision on air versus water cooling will be completed. In either case, a source of water will be required for plant utility needs.

<u>Communication System</u>: The communication system at the LNG Plant site would be comprised of a telephone exchange, a radio system, a computer network, a plant telecommunication network, a telemetry system for data transfer to/from gas production sites, an electronic mail system for communication, and a closed-circuit television (CCTV) system.

<u>Plant Safety</u>: The LNG Plant will meet the requirements under NFPA 59A, PHMSA regulations at 49 CFR Part 193, USCG regulations at 33 CFR Part 127, and other applicable standards for safety and fire protection.

<u>Plant Security</u>: The LNG Plant would be subject to USCG facility security regulations under Maritime Transportation Security Act (MTSA) regulations at 33 CFR Part 105 and will have a facility security plan approved by the USCG. The LNG Plant will meet all necessary security measures required under those regulations including security fencing, lighting, access control, and CCTV.

## 6. The LNG vessels' characteristics and the frequency of the LNG export shipments from the Facility

The LNG Plant is being designed with new berthing and mooring configurations to accommodate LNG carriers. The berthing and mooring configurations will be able to accommodate LNG carriers with capacities between 125,000 and 216,000 m<sup>3</sup>. It is currently projected that, on average, 20 LNG carriers per month would make port calls at the LNG Plant.

## 7. Charts showing waterway channels and identifying commercial, industrial, environmentally sensitive, and the residential areas in and adjacent to the waterway to be used by the LNG vessels in and out of the facility, within 25 kilometers (15.5 miles) of the Project.

A chart showing the waterway channel to be used by the LNG carriers to and from the facility is presented in the attached figure which also shows commercial, industrial, environmentally sensitive, and the residential areas in and adjacent to the waterway (See Attachment 1, Figure 2). In addition to the information above, the Alaska Parties are providing a Preliminary WSA ("PWSA") as Attachment 1. Our PWSA has been prepared in accordance with the guidance contained in USCG Navigation and Vessel Inspection Circular 01-2011. If the Coast Guard has any questions or requires any additional information or clarification, please feel free to contact Charlie Kominas at (832) 624-2816. Sincerely,

#### Re: Use of Pipe-in-Pipe in the Marine Transfer Area; NFPA 59A (2013)

Dear Sir:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, and ExxonMobil Alaska LNG LLC (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce and opportunities for in-state deliveries of natural gas.

This letter requests that the United States Coast Guard (USCG) concur with the Project's use of NFPA 59 A (2013) in lieu of NFPA 59A (1994) as cited in 33 CFR 127.003. This letter provides the Project's rational in choosing to examine the use of cryogenic pipe-in-pipe per NFPA 59A (2013) for LNG transfer piping at the proposed liquefaction facility at Nikiski, Alaska. This request follows up our meeting and presentation on the topic with CDR Cintron and staff on October 6, 2015. Enclosure (1) provides the technical material related to topic presented at that meeting.

The USCG has jurisdiction over the marine transfer area of the LNG terminal between the vessel and the last valve before the tank (33 CFR 127.005). Similarly, the 2004 Interagency Agreement among the USCG, the Federal Energy Regulatory Commission (FERC), and the Pipeline and Hazardous Materials Safety Administration (PHMSA) states that USCG jurisdiction includes "all matters pertaining to the safety of the facility or equipment located in or adjacent to the navigable waters up to the last valve immediately before the receiving tank." The USCG, in 33 CFR 127.017 Alternatives, permits the COTP to "allow alternative procedures, methods, or equipment standards to be used by an operator instead of any requirements in this part" subject to certain requirements.

Under NFPA 59A standards (1994, 2001, 2006 and 2013), transfer areas for LNG shall be provided with impoundment in a manner that minimizes the possibility of accidental spills and leaks that could endanger structures, equipment, or adjoining property or that could reach waterways. A secondary containment system has typically been incorporated under the LNG transfer piping to channel a potential release of LNG liquid into an impoundment area designed for a specified volume of LNG. Historically and prior to the release of NPFA 59A (2013) LNG transfer piping was a single-wall design with an outer insulation layer and an open culvert-type system constructed of cryogenic concrete. NFPA 59a (2013) specifically addressed the use of pipe-in-pipe technology.

Several site-specific challenges in Nikiski, such as the large elevation difference between the trestle and LNG storage tanks, the sub-arctic winter weather conditions, and the extreme tides and currents, led the Project to evaluate and select an alternative design that meets regulatory requirements. The geometry of the proposed LNG marine terminal at Nikiski is not conducive to a traditional-type catchment and vapor

barrier system; the LNG loading berths are approximately 3,400 feet from the shoreline and approximately 100 feet below the elevation of the LNG storage tanks. A traditional design featuring a channel and vapor barriers/shrouds would add significant weight and complexity to the trestle and berth structure. In sub-arctic winter weather conditions, the traditional design would necessitate personnel manually clearing snow and ice and potentially performing other maintenance activities for the channel and vapor barriers at height above the water in unfavorable conditions.

Due to these site-specific challenges, the Project intends to provide the required secondary containment system under LNG transfer piping leading from the storage facility to the marine terminal through use of a cryogenic pipe-in-pipe system. The system will be in accordance with NFPA 59A (2013) that specifically addresses the use of this technology as a secondary containment system (*Section 9.11 Cryogenic Pipe-in-Pipe Systems*). Additionally, CG-OES Policy Letter No. 02-15, *Guidance Related to Vessels and Waterfront Facilities Conducting LNG Marine Fuel Transfer Operations*, Enclosure (4), Table of Alternatives to 33 CFR 127 for LNG Fuel Transfer states that NFPA 59A (2013) is an acceptable alternative to the reference cited in 33 CFR 127.003. Further, through an informal inquiry to USCG Headquarters (Mr. Ken Smith, Assistant Division Chief, Vessel & Facility Operating Standards Division – G-PSO-2) we were informed that while 33 CFR 127 points to NFPA 59A (1994) and is regulatory in reference, the USCG would not have an issue with NFPA 59A (2013) standards in the construction of new LNG terminals.

The use of pipe-in-pipe design for the LNG transfer piping offers distinct advantages for the Alaska LNG Project. Use of a pipe-in-pipe system would reduce the weight of materials and required support structures engineering for a long trestle as well as resolve impoundment placement and any additional vapor barrier placement issues. It would allow for quicker detection of any leakage through the inner pipe and not allow for the unconfined escape of vaporized LNG. Pipe-in-pipe systems would eliminate areas for the accumulation of water in catchment systems and in winter conditions prevent the formation of ice and snow buildup, reducing the requirement for personnel to potentially work over the water. Overall the Project feels that pipe-in-pipe systems are much safer in providing the required protection than legacy open culvert and impoundment systems at the Nikiski location.

We appreciate your assistance in this matter and look forward to your response. Should you have any questions or require further information, please contact Dave Raaf at 835 625 6525, email <u>dave.raaf@exxonmobil.com</u> or Dennis Maguire at 978 400 8950 / <u>dennis.maquire@exxonmobil.com</u>.

Sincerely,

Charlie Kominas Alaska LNG Project Safety, Security, Health and Environment Manager For and on behalf of ExxonMobil Alaska LNG, LLC

#### Re: Request for Alternative Compliance per 33 CFR 127

Dear Sir:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC (EMALL), and TransCanada Alaska Midstream LLP (a wholly-owned affiliate of AGDC, and with AGDC, collectively referred to herein as "AGDC") plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit and Prudhoe Bay Unit production fields on the Alaska North Slope, for export in foreign commerce and opportunities for in-state deliveries of natural gas.

In accordance with the provisions of 33 CFR 127.017, EMALL, on behalf of the Project is requesting USCG approval of an alternative method of compliance to the requirements of 33 CFR 127.601 and 127.607, specifically the requirement for fire hydrants and hoses along the length of the trestle supporting the LNG transfer lines between the product loading berths and the shore side abutment. The product loading berths and the shore side abutment. The product loading berths and the trestle would continue to comply with these requirements. The Project would use a Firefighting 1 (FiFi 1) classed tug to provide the necessary fire protection on the trestle in lieu of the hydrant and hose system required by 33 CFR 127.607 for the distance between the product loading berths and the shore side abutment. A (FiFi 1) classed tug will be in close proximity whenever an LNGC is at berth in lieu of the hydrant and hose system.

All the LNG transfer piping along the trestle is welded piping without any flanges, piping branch connections to other plant facilities, valves or equipment and is separated from the road bed such that it cannot be struck by a vehicle driving along the trestle. Furthermore, the trestle is not an occupied structure, but is being designed to support the LNG and vapor transfer lines to load LNGCs and other minor utilities services (e.g. air, water and electrical). It is also being designed to provide access for personnel and supplies transiting to/from the LNGC and maintenance of equipment and system. A FiFi 1 equipped tug would provide better coverage and capabilities to those required by 33 CFR 127.607. The use of a FiFi 1 tug would greatly enhance the safety of firefighting personnel as significant volumes of water could be directed on necessary areas remotely without the need for personnel to engage in close proximity extinguishment and exposure to either the extreme weather elements, unignited vapors or the thermal flux of any flames. A typical FiFi 1 equipped tug can deliver 2400 cubic meters/hour (10,500 gallons per minute) of seawater from two monitors at a throw length of 120 meters (394 feet) and a throw height of 45 meters (148 feet). These capabilities and evacuation procedures would be included in the Emergency and Dock Manuals.

The following table provides a comparison between the system required by regulation and the FiFi 1 equipped tug system proposed. It demonstrates that the tug coverage is superior to that required by the regulations.

|                                  | Minimum<br>nozzles /<br>monitors       | Approximate<br>GPM                          | Approximate<br>stream throw<br>length | Personnel<br>protection           | Comments                                                                                            |
|----------------------------------|----------------------------------------|---------------------------------------------|---------------------------------------|-----------------------------------|-----------------------------------------------------------------------------------------------------|
| Required by<br>33 CFR<br>127.607 | 2 hoses 1 ½"<br>hose<br>diameter       | 100 GPM / hose;<br>Total 200 GPM*           | 100 feet                              | None<br>specified                 | Limited<br>maneuverability, puts<br>responders in<br>proximity to danger                            |

#### **Comparison of Capabilities between Proposed Alternative and Required Equipment**

\* Based on a minimum 75 PSI at the end of a standard fog nozzle and 100 feet of 1 1/2" hose per 33 CFR 127.607 (c)(2)

As stated in 33 CFR 127.017 the Captain of the Port may allow alternative procedures, methods, or equipment standards to be used by an operator instead of any requirements in this part if the alternative provides at least the same degree of safety provided by the regulations in this part. As discussed above, and with the information provided in the comparison table, the alternative proposed by the Project fulfills that requirement.

We appreciate your assistance in this matter and look forward to your response. Should you have any questions or require further information, please contact Dave Raaf at 835-625-6525 / <u>dave.raaf@exxonmobil.com</u> or Dennis Maguire at 978-400-8950 / dennis.maguire@exxonmobil.com.

Sincerely,

CL 12

Charlie Kominas Alaska LNG Project Safety, Security, Health and Environment Manager For and on behalf of ExxonMobil Alaska LNG, LLC

## Alaska LNG.

Alaska LNG Project 3201 C Street, Suite 506 Anchorage, AK 99503

Document No.: USAL-PE-SALTR-00-000005-000

March 16, 2016

Captain Paul Albertson Captain of the Port, Western Alaska U.S. Coast Guard Sector Anchorage G-Wing Bldg 49000 Army Guard Road JBER, Alaska 99505

### Re: Submittal of Alaska LNG Project Follow-on Waterway Suitability Assessment Report pursuant to 33 CFR 127.007

Dear Captain Albertson:

Pursuant to 33 CFR 127.007 and 18 CFR 157.21, the attached Follow-on Waterway Suitability Assessment (WSA) Report is being submitted in support of the Alaska LNG Project. The Follow-on WSA Report has been marked as Sensitive Security Information (SSI) and the file is password protected. The password will be transmitted separately.

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LLP<sup>1</sup> (a wholly owned affiliate of AGDC, and with AGDC, collectively referred to herein as "AGDC") plan to construct one integrated liquefied natural gas (LNG) Project. The Project includes interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska North Slope, for export in foreign commerce and opportunities for in-state deliveries of natural gas. The proposed Liquefaction Facility will be supplied by an approximately 800-mile natural gas pipeline fron the North Slope, located on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula.The Liquefaction Facility is composed of an LNG Plant and Marine Terminal.

The Follow-on WSA Report is the culmination of a multi-stakeholder process carried out in accordance with the guidance in Navigation and Vessel Inspection Circular (NVIC) No. 01-2011 and through coordination with the U.S. Coast Guard (USCG) Sector Anchorage Waterways Management Division. A Letter of Intent and Preliminary WSA in support of the Alaska LNG Project was previously submitted to the USCG on May 15, 2014.

The attached Follow-on WSA Report describes the suitability of the waterway to support additional marine traffic associated with proposed Liquefaction Facility. The report assesses the safety and security of LNG carriers while at berth and during transit to and from the Liquefaction Facility. The Follow-on WSA considers credible safety and security events, infrastructure dependencies and impacts along the proposed LNG carrier route, and assesses resources for safe and secure LNG carrier transist and operations.

<sup>&</sup>lt;sup>1</sup> TransCanada Alaska Midstream LLP is in the process of being dissolved as a corporate entity by AGDC. AGDC will submit an update to the Alaska LNG Project FERC docket (No. PF14-21-000) once the dissolution becomes effective.

The report will support your evaluation of the proposed Project, and will provide a basis for USCG decision-making for issuing a Letter of Recommendation (LOR) to the Federal Energy Regulatory Commission (FERC) as to the suitability of the waterway in question for LNG carrier marine traffic.

Thank you for your staff's support and coordination during this process.

Please contact me at (832) 624-2816 or charlie.kominas@exxonmobil.com if you have any questions.

Sincerely,

12

Charlie Kominas Alaska LNG Project Safety, Security, Health & Environment Manager For and on behalf of Alaska LNG Project Applicants

-----Original Message-----From: Joseph, Claire E [mailto:claire.e.joseph@exxonmobil.com] Sent: Friday, March 18, 2016 12:35 PM To: Cintron, Hector L CDR; Chung, Eugene LT Cc: jennifer.lee@nrg-llc.com; James Martin; Davis, Robert L MST1; Kominas, Charlie; Medrano, Ruben; Wuestenfeld, Karen /SEC; Maguire, Dennis /C; RAUN, JEFF Subject: [Non-DoD Source] Alaska LNG Project Follow-on Waterway Suitability Assessment Report

CDR Cintron, LT Chung -

We are pleased to submit the final Follow-on Waterway Suitability Assessment Report for the Alaska LNG Project to support the Captain's evaluation of the proposed Project and issuance of a Letter of Recommendation to the Federal Energy Regulatory Commission as to the suitability of the waterway for LNG carrier marine traffic.

The password-protected report will be separately transmitted to you. Please let me know if you would like us to provide a paper copy (or copies).

Thank you very much for your time and assistance and that of your team throughout the WSA process.

Regards,

Claire Joseph

Alaska LNG Project Attn: Charlie Kominas Safety, Security, Health and Environmental Manager 3201 C Street Anchorage, AK 99503

Dear Mr. Kominas,

- 1. Your December 3, 2015 request to use the cryogenic pipe-in-pipe installation as an alternative to conventional containment for your Alaska LNG facility in Nikiski, Alaska has been approved, contingent on the following stipulations:
  - (a) Construction of the pipeline and arrangements shall be designed, fabricated, examined, and tested in accordance with ASME B 31.3 as per NFPA 59A (2013) Section 9.11 Cryogenic Pipe-in-Pipe Systems or other alternatives incorporated by reference in 33 CFR Part 127.
  - (b) Once construction of the pipeline and arrangements have been completed and inspection levels have been specified, my Facilities Division must verify the satisfactory installation and tests of the arrangement.
  - (c) The Marine Transportation-Related Facility shall demonstrate a satisfactory means to prevent corrosion either through corrosion protection and/or detection.
  - (d) The Marine Transportation-Related Facility shall demonstrate a satisfactory means to minimize thermal conductance and heat loss in the annular space and inner pipe support system. In addition, provisions shall be provided for temperature monitoring.
  - (e) The Marine Transportation-Related Facility shall conduct annual transfer pipeline tests as required by 33 CFR §156.170 and maintain proper records.
  - (f) If the Marine Transportation-Related Facility conducts a pneumatic test, an approval letter from the Coast Guard Captain of the Port for alternative testing must be maintained by the facility.
  - (g) Satisfactory tests of the emergency shutdown valves must be witnessed by my staff.
  - (h) The Marine Transportation-Related Facility is situated in a way that poses no risk of impacting public and commercial water supply intakes if a spill were to occur from any transfer piping or storage tank.

#### 16611 June 23, 2016

- (i) The topography surrounding the Marine Transportation-Related portion of the facility is such that a spill of an average most probable discharge would have minimal potential impact to navigable waters.
- (j) The Marine Transportation-Related Facility does not conduct secondary marine transfers.
- 2. Please keep a copy of this letter with your facility records. Failure to comply with any of the stipulations listed in this letter will invalidate the alternative containment approval and will require the facility to comply with additional measures. If you have any questions concerning this letter please contact the Sector Anchorage Waterways Management Division at (907) 428-4189.

Sincerely,

P. ALBERTSON Captain, U.S. Coast Guard Captain of the Port, Western Alaska U.S. Department of Homeland Security

United States Coast Guard

16611 August 17, 2016

DIRECTOR OF GAS ENVIRONMENT AND ENGINEERING, PJ 11 FEDERAL ENERGY REGULATORY COMMISION (FERC) 888 1ST ST NE WASHINGTON, DC 20426-0002

Dear Sir or Madam:

1. In response to the Alaska LNG Project (Project) Letter of Intent (LOI) dated May 15, 2014, this Letter of Recommendation (LOR) is issued pursuant to 33 CFR §127.009 and Interagency Agreement (2004) to assist FERC in determining whether the Project should be authorized.

2. The Project proposes to operate the Alaska LNG facility in Nikiski, Alaska, where liquefied natural gas (LNG) is to be transferred in bulk to arriving vessels.<sup>1</sup> The Project expands an existing LNG export terminal. Based on a comprehensive review of marine safety and security issues in coordination with port partners, I recommend Cook Inlet be considered suitable for accommodating the type and frequency of LNG marine traffic associated with the Project.

3. The Coast Guard reviewed the LOI and associated Waterway Suitability Assessment (WSA). On April 11, 2016 we completed our review of the Follow-on WSA submitted by AcuTech Consulting Group March 18, 2016. We did this in accordance with U.S. Coast Guard Navigation and Vessel Inspection Circular (NVIC) 01-2011. We focused on navigation safety and maritime security with respect to LNG vessels transiting Cook Inlet. This included an assessment of risks posed by LNG transits and validation of risk management strategies in the WSA. We consulted a variety of stakeholders including the governing Area Maritime Security Committee, Cook Inlet Harbor Safety Committee, Cook Inlet Regional Citizens Advisory Council, and local emergency response groups.

4. The enclosed LOR Analysis contains a detailed summary of the WSA review process. It documents assumptions made and details potential vulnerabilities and operational safety and security measures analyzed during the review.

5. The LOR Analysis is marked *Sensitive Security Information* and is withheld from distribution.<sup>2</sup> The LOR Analysis identifies navigational safety and maritime security resource gaps that currently exist in, on, and adjacent to the waterway, including the marine transfer area of the proposed facility, and which, to the extent allowable under FERC's existing legal authority, may be addressed in its Commission Order if one is issued. To the extent

<sup>&</sup>lt;sup>1</sup> Vessel-to-vessel LNG bunkering operations fall outside the scope of this Letter of Recommendation.

<sup>&</sup>lt;sup>2</sup> Documents containing SSI may be made available upon certification that the requestor has a need to know and appropriate document handling and non-disclosure protocols have been established.

implementation of specific mitigation measures fall outside the scope of FERC's legal authority, the applicant is expected to examine the feasibility of implementing such measures in consultation with the Coast Guard, state, and local agencies, as applicable.

6. This letter is not an enforceable order, permit, or authorization that allows any party, including the applicant, to operate a facility or a vessel on the affected waterway. Similarly, it does not impose any legally enforceable obligations on any party to undertake any future action, be it on the waterway or at the proposed facility. Further, it neither authorizes nor restricts the transit of properly certificated vessels in Cook Inlet.

7. As with all issues related to waterway safety and security, the Coast Guard may assess each vessel transit on a case-by-case basis to identify what, if any, safety and security measures are necessary to safeguard the public health and welfare, critical marine infrastructure and key resources, the port, marine environment, mariners and vessels. In the event the facility begins operation, LNG vessel transits commence, and matters arise concerning the safety or security of any aspect of the operation, the COTP may issue an order pursuant to the Ports and Waterways Safety Act of 1972, 33 U.S.C. §1221, *et seq.*, as amended by the Port and Tanker Safety Act of 1978, to safeguard maritime safety and security.

8. Please direct any questions you may have to Commander Hector Cintron of my staff. He may be reached at 907-428-4149, or by email: <u>Hector.L.Cintron@uscg.mil</u>

Sincerely,

P. ALBERTSON Captain, U.S. Coast Guard Captain of the Port, Western Alaska

#### Re: Clarification on conditions of approval to use Pipe-in-Pipe in the Marine Transfer Area

Dear Sir:

Thank you for the letter dated 23 June 2016 approving pipe-in-pipe installation as an alternative to conventional containment at the proposed Alaska LNG liquefaction facility in Nikiski, Alaska. On 16 August 2016, Alaska LNG project team members held a teleconference with your staff seeking clarification on the conditions of approval. Please accept this letter proposing the clarifications as discussed with your staff.

1. Item 1(e) in the US Coast Guard letter dated 23 June 2016 is not applicable to the subject approval for pipe-in-pipe installation at the proposed liquefaction facility The appropriate citation is 33 CFR Part 127.407.

Discussion: 33 CFR Part 156.170 is applicable to oil and hazardous materials. Per 33 CFR Part 154.105, "hazardous material" does not include liquefied gases. As liquefied natural gas does not meet the applicable definitions, the reference to 33 CFR Part 156.170 is not applicable and should be removed as a condition to pipe-in-pipe approval.

2. Item 1(f) in the US Coast Guard letter dated 23 June 2016 is not applicable to the subject approval; pressure testing will be in accordance with 33 CFR Part 127.407.

Discussion: 33 CFR Part 127.407 outlines the testing requirements applicable to the proposed pipe-in-pipe installation and is the appropriate citation for testing conditions.

- Coast Guard regulations reference the term Maximum Allowable Working Pressure (MAWP). USCG Sector Anchorage staff requested a comparison between MAWP and the Project terminology of Design Pressure.
  - a. Design Pressure is commonly used (ref. ANSI B31.3) and is the pressure selected by the vessel/equipment designer that is "not less than the pressure at the most severe condition of coincident internal or external pressure and temperature (minimum or maximum) expected during service". The design pressure serves as the basis for the initial selection and thickness of materials required in the fabrication of the vessel/equipment item. It can be equal to, but will never exceed the MAWP.

- b. MAWP for a vessel is the maximum permissible pressure at the top of a vessel in its normal operating position at a specific temperature, usually the design temperature, adjusted for any difference in static head that may exist between the part considered an the top of the vessel. This pressure is based on calculation for every element and component of the vessel using the nominal thickness exclusive of corrosion allowance The MAWP for the vessel will be governed by the MAWP of the weakest parts.
- c. Procurement and fabrication of all AKLNG equipment items will be based on the required design pressure. After fabrication the MAWP, based on actual material utilized, and certified by the manufacturer/fabricator will equal or exceed the design pressure.

We appreciate and thank you for your cooperation on these clarifications. If you have any questions about the proposed changes to the conditions of approval for the use of pipe-in-pipe, please contact Jeff Raun at 907-929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

PEBruham

From: Rea, Caryn /SEC Sent: Wednesday, May 20, 2015 1:10 PM To: Romero, Mary R POA; Jewel Bennett (jewel bennett@fws.gov); martin.gayle@epa.gov Cc: Antonakos, Elena A Subject: Wetland Protocols

#### Hello everyone

Attached are the wetlands protocols the Alaska LNG is following for mapping wetlands in the proposed project area. We had a good discussion about this a couple of weeks ago; subsequently we received a request from Mary to forward these along to all of you. Please cascade through your organization as appropriate. Prior to my joining the Alaska LNG team in mid-October 2014, the permits staff met with Janet Post to review the protocols – based on input received, the protocols were revised to the version you see in this attachment. If there are any glaring omissions from the protocols that you think might be a problem for us as we move toward development of an ASA, please do let us know.

1

Otherwise, the team will be moving forward with these protocols this season, to be consistent with prior years. Best, Caryn

Re: Alaska LNG air quality modeling approach

Dear Herman

The Alaska LNG Project plans to construct several stationary sources of air emissions as part of its plan to construct an integrated project with interdependent facilities for the purpose of liquefying natural gas for export and opportunity for in-state delivery. As the lead agency for the National Environmental Policy Act (NEPA) Environmental Impact Statement (EIS) for Alaska LNG, the Federal Energy Regulatory Commission (FERC) has initiated a pre-filing process that precedes the commencement of the EIS process. As part of pre-filing, Alaska LNG is required to submit a series of draft Resource Reports. FERC issued a number of comments to Alaska LNG following its review of the Draft 1 Resource Reports, some of which are required to be addressed before the submittal of the Draft 2 reports. One such comment relates to Resource Report 9 (Air and Noise Quality), as follows.

"Include results of consultations with the Alaska Department of Environmental Conservation (ADEC) and the U.S. Environmental Protection Agency concerning the availability of ambient monitoring data and that a complete and adequate air quality impact analysis can be accomplished with the available data, or if additional preconstruction ambient air monitoring would be required. If preconstruction monitoring is required, include a rationale for station siting and a schedule for preconstruction air quality and meteorological data collection, approval by the ADEC, and completion of the modeling analyses at the GTP and Liquefaction Facility. Include a contingency plan for any incomplete collection of data in this process (e.g., fill in data gaps with other monitoring datasets). This information is being requested prior to the next draft of resource reports to ensure that the appropriate data are available for analysis during the next round of review." Except from FERC tetter to Alaska LNG; May 15, 2015.

To address the request from FERC, Alaska LNG has prepared a proposed modeling approach, which identifies proposed source data and applicable modeling tools for each stationary source proposed to be constructed as part of the Alaska LNG Project. The approach addresses the modeling and air quality-related analyses that would be required to support review of the project under NEPA.

We are seeking EPA's feedback on the enclosed modeling approach in writing, to be able to provide FERC written evidence of EPA's feedback in response to the above referenced comment.

To assist with a timely response to FERC's request, the Alaska LNG Project requests EPA comments by August 14 2015. We appreciate your assistance with this matter.

Please contact our Environmental Impact Statement Advisor, Norman Scott, at 907-929-4129 or by e-mail at norm.scott@exxonmobil.com if you have any questions.

Sincerely,

Karen Wuestenfeld EIS Lead

Enclosure(s): Memorandum: Modeling Approach

#### 12 August 2015

From: Herman Wong, EPA Region 10

To: Norm Scott, AK LNG

Subj: AK LNG Project Modeling Protocol; Request for Comment

In response to your request, EPA Region 10 is providing comments on the Modeling Approach for Federal Conservation Units, AK LNG Project memorandum dated June 2015 that was attached to an email dated 31 July 2015 and on the AK LNG – EPA Region 10 Air Quality Meeting POWERPOINT presentation provided on 5 August 2015 at our office in Seattle. These comments are intended only as general suggestions to help guide development of the emission calculations, the new and/or modified stationary sources and the non-stationary source modeling analyses, and the cumulative analyses.

Essentially, the proposed project will consist of a new Gas Treatment Plant (GTP) that receives natural gas from the BP Prudhoe Bay Unit (PBU) and the ExxonMobil Point Thomson Unit (PTU) pipelines. From the GTP, the natural gas flows through a 42-inch diameter pipeline (Mainline) 800 miles south to the Liquified Natural Gas (LNG) facility/terminal at Nikiski in the Cook Inlet. Principal facilities along the Mainline include eight compressor stations, two heater stations, four meter stations, 53 Mainline block valves and off-take interconnection points. Adjacent to the LNG facility will be two loading berths for the LNG.

Below are our comments as it relates to the National Environmental Policy Act (NEPA) ambient air quality impact analysis. Please contact me after your review of the comments if there are concerns.

- A. General Comments
  - Region 10 generally defers to the FLMs to address visibility, air quality related values (AQRV) and deposition at Class I and Class II Federal Conservation Units (FCUs). However, EPA has the responsibility to ensure the AK LNG project emissions comply with National Ambient Air Quality Standards (NAAQS) and air quality increments at the FCUs and in ambient air.
  - 2. Region 10 suggests that AK LNG submit a revised modeling protocol to the Federal Land Managers (FLMs) and Region 10 for comment when there are more details and prior to initiation of any modeling analysis.
- B. Specific Comments
  - Table 2 Calculation of Q/D for Proposed Facilities and Federal Conservation Units (where D < 300 km) in the June 2015 Memorandum. Clarification should be obtained from the FLMs regarding cumulative analyses and the use of the screening tool, Q/D.
  - 2. Table 3 Air Dispersion Modeling for Screened Class I and Sensitive Class II Areas in the June 2015 Memorandum.
    - a. Emissions from GTP along with the PBU and PTU should be included as part of the North Slope analyses.

- b. Region 10 will provide 2009 2012 Weather Research and Forecasting (WRF) model solutions to the FLMs for the FCU modeling analyses affected by the North Slope emission sources. Three years of modeling analysis is recommended since the solutions are available.
- c. Region 10 recommends at least one calendar year of WRF solutions during the years 2009 - 2012 for the FCU modeling analyses affected by the Nikiski/Cook Inlet emission sources. WRF has replaced the mesoscale meteorological model, version 5 (MM5).
- 3. Emission Rate and Source Parameters

Air pollutant emissions during construction and operation should be estimated using the best data available at the time the calculations are conducted. Region 10 suggests taking a conservative approach in calculating emissions; i.e., where uncertainty exists, calculations should not be based on optimistic assumptions which result in potentially underestimated emission rates or concentrations. All assumptions and data sources used in the emission calculations should be provided as attachments to the calculations.

- 4. Although an air permit is not required, emissions for Heater Station 1 should be quantified and shown.
- 5. For compliance demonstration with NAAQS, background air quality data should be representative in accordance with EPA guidance. That is, measurements of sulfur dioxide (SO<sub>2</sub>), oxides of nitrogen (NO<sub>x</sub>), carbon monoxide (CO), ozone (O<sub>3</sub>), particulate matter less than or equal to ten microns (PM<sub>10</sub>), particulate matter less or equal to 2.5 microns (PM<sub>2.5</sub>), and lead (PB) must meet currentness, monitor location, and data quality requirements.
- 6. The compressor stations are located in remote areas. The NAAQS compliance demonstration for these stationary sources can use the nearest background air quality measurements with adequate justification.
- The formation of O<sub>3</sub> and secondary particulate matter should be addressed. Note that Region 10 can provide speciated PM<sub>2.5</sub> concentrations measured at Deadhorse.
- 8. The hourly measured meteorological data used to predict near field ambient air quality impacts with AERMOD should meet the requirements in EPA's February 2000 onsite meteorology guidance, particularly Table 8.4.
- For Comments B.5 and B.8, there should be an approved Quality Assurance Project Plan (QAPP), independent audit reports and data validation scans available for review.
- 10. Greenhouse gas (GHG) emissions should be quantified and discussed. We recommend the proposed Council of Environmental Quality (CEQ) guidance on addressing GHGs and climate change in NEPA documents:

https://www.whitehouse.gov/administration/eop/ceg/initiatives/nepa/ghg-guidance

- 11. For the Prevention of Significant Deterioration (PSD) increment demonstration, provide a discussion of the affected Air Quality Control Regions and air pollutants, and major and minor source baseline dates (if triggered).
- 12. An Environmental Justice analysis should be conducted to ensure that "...no group of people bear a disproportionate share of the negative environmental consequences from industrial, governmental and commercial operations or policies."
- 13. AERMOD Modeling System and AERSCREEN

There should be a section or paragraphs in the modeling protocol that includes the following:

- a. A description of the selected models and options, particularly if they are not defaults. The models include the AERMOD dispersion program, AERMET meteorological data preprocessor, AERMAP terrain preprocessor, and AERSURFACE. AK LNG should contact AK DEC to obtain guidance on the surface characteristics of area in which the stationary source is located.
- b. Tabular summaries of stack parameters, area sources and volume sources as applicable. This includes Universal Transverse Mercator (UTM) coordinates and the datum, and ground level elevation.
- c. If the Plume Rise Model Enhancements (PRIME) downwash algorithm is used to evaluate wake effects, provide a figure(s) that shows all the buildings contributing to downwash and a table listing the building height, width and length and the UTM corner coordinates of each building.

Herman Wong Regional Atmospheric Scientist/Modeler United States Environmental Protection Agency, Region 10 1200 Sixth Ave, OEA-140 Seattle, WA 98101

#### Re: Alaska LNG GTP Offsite Inventory, Ozone and Secondary PM2.5 Analysis Approaches

Dear Mr. Wong:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, and ExxonMobil Alaska LNG LLC plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce and opportunities for in-state deliveries of natural gas.

The Federal Energy Regulatory Commission (FERC) has approved the Project's use of FERC's National Environmental Policy Act (NEPA) Pre-filing Review Process. As part of Pre-Filing, the applicant is required to submit a series of draft Resource Reports to inform the eventual Environmental Impact Statement (EIS). Resource Report #9, which is focused on air and noise quality, will include an analysis of project criteria pollutant cumulative impacts (including ozone, and secondary PM<sub>2.5</sub>), among other air quality related evaluations.

FERC expects Project representatives to consult with the U.S. Environmental Protection Agency (USEPA) while developing protocols for these evaluations. To fulfill this expectation, on November 12, 2015, Project representatives and USEPA Region 10 representatives discussed a proposed modeling approach for the following Project aspects:

- The scope of the modeled offsite inventory for the North Slope Gas Treatment Plant (GTP) Alternative Location near-field cumulative impact analysis; and
- The foundation of the Project ozone and secondary PM2.5 cumulative impact assessment.

Enclosed is a copy of the presentation reviewed with you on November 12<sup>th</sup> which details our approaches for these two issues.

As discussed during the meeting, if the GTP were located at the location depicted in the presentation, no existing source is near enough to warrant including it individually in the near-field cumulative impact analysis. Instead, the Alaskan North Slope sources can be represented in the cumulative impact analysis with a background concentration developed with 3 years of data collected at the BP Exploration (Alaska), Inc. A-Pad Monitoring Station, using a first tier approach<sup>1</sup>.

<sup>&</sup>lt;sup>1</sup> Details regarding the first tier background approach are found on page 17 of the Memorandum titled "Additional Clarification Regarding Application of Appendix W Modeling Guidance for the 1-hour NO<sub>2</sub> National Ambient Air Quality Standard, from Tyler Fox, Leader of the Air Quality Modeling Group to Regional Air Division Directors. For a first tier approach, the monitored NO<sub>2</sub> design value, i.e., the 98th-percentile of the annual distribution of daily maximum 1-hour values averaged across the most recent three years of monitored data, should be used irrespective of the meteorological data period used in the dispersion modeling.

The November 12<sup>th</sup> meeting also addressed the Project's proposed ozone and secondary PM<sub>2.5</sub> cumulative impact assessment. There are sufficient measurements on the Alaskan North Slope and in southcentral Alaska and literature available to establish that ozone and secondary particulate concentrations are dominated by long-range transport and biogenic sources and show a lack of sensitivity to regional development. These data indicate there is no need for project- and source-specific modeling analyses. Therefore, Project modeling plans do not include photochemical modeling to support the ozone and secondary particulate assessment and will rely on a qualitative assessment. The qualitative assessment will focus on the following:

- Quantifying project precursor emissions and comparing them to the existing regional loading;
- · Quantifying existing ambient measurements and trends over time; and
- Describing conditions impacting existing ambient measurements and suppressing ozone and secondary PM<sub>2.5</sub> formation.

I respectfully request your written concurrence prior to December 4, 2015, in order to provide FERC evidence of the Project's consultation and alignment with USEPA regarding the approaches discussed herein.

If you have any questions regarding this letter or the attached presentation, please contact Jim Pfeiffer, Alaska LNG Sr. Air Permit Advisor, at (832) 624-7091(or james.pfeiffer@exxonmobil.com).

Sincerely,

12

#### Re: Letter to EPA - Review of Nikiski Capital Dredge Material Characterization SAP

Dear Mr. Meade:

ExxonMobil Alaska LNG LLC (EMALL) on behalf of the Alaska LNG Project (Project) is requesting your review of the revised Sampling and Analysis Plan (SAP) for the Alaska LNG Project sediment sampling program at Nikiski to support future evaluation and permitting of potential capital (construction) dredging in Cook Inlet.

We would greatly appreciate feedback on the SAP by July 29<sup>th</sup> if possible so that we can incorporate any modifications and plan potential future work programs.

We appreciate and thank you for your cooperation. If you have any questions about the enclosed plan, please contact Jeff Raun at 907-929-4105 or jeff.raun@exxonmobil.com.

Sincerely,

PEBAUNA

RE: Alaska LNG Project FERC Docket No.: PF14-21-000

Dear Ms. Conn:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (together, Project Participants) have initiated the Federal Energy Regulatory Commission's ("FERC" or "Commission") pre-filing review process for the Alaska LNG Project (Project) under 18 C.F.R. Section 157.21 of the FERC regulations. On September 12, 2014, the Director of the Office of Energy Projects ("OEP") issued a letter order granting the Project Participants' pre-filing request and assigning the Project FERC Docket No. PF14-21-000. Project Participants plan to prepare and file an application for authorization under Section 3 of the Natural Gas Act to site, construct and operate the Project.

In accordance with provisions of the NEPA (83 Stat. 852; 42 U.S.C. 4321 *et seq.*), federal laws governing the protection of Federally listed endangered and threatened species (listed species) including the Endangered Species Act (ESA) (87 Stat. 884, as amended; 16 U.S.C. 153 I *et seq.*), the Bald and Golden Eagle Protection Act (54 Stat. 250, as amended, 16 U.S.C. 668a-d), the Migratory Bird Treaty Act (40 Stat. 755, as amended; 16 U.S.C. 703 et seq.) and the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.) apply to the review and approval of this Project. This letter is a request to initiate informal consultation with the U.S. Fish and Wildlife Service ("FWS") for the proposed Project pursuant to Section 7(a)(2) of the ESA. The Project Participants are the Commission's designated non-Federal representative under 18 C.F.R. Section 380.13(b)(1) for purposes of informal consultation with the FWS under the ESA.

Project Participants are in the early stages of planning for the proposed Project. Project Participants have established a preliminary study corridor for the Mainline and study areas for the facilities of the Project. A route within the study corridor will be finalized with stakeholder input during the pre-filing process. A general project overview map depicting the study areas/corridor for the Project is attached for your review, along with GIS shapefiles.

On behalf of the Project Participants, this letter requests any information (including but not limited to a list of species) you may have regarding federally threatened or endangered species or critical habitat that may occur in the vicinity of the Alaska LNG Project. Protected species information provided by the FWS will be included in an applicant-prepared Biological Assessment (BA) that will be included as an appendix to Resource Report No. 3 of the Environmental Report (ER) that would form part of our application. It is expected that this BA will be developed over the next two draft submittals of the ER to result in a complete BA for the final FERC application. FERC and FWS can then properly consider any effects on known listed species and propose avoidance or mitigation measures during their review. Concurrent consultation with the National Marine Fisheries Service will occur.

We look forward to your participation in the evaluation of this project. If you have any questions, please contact me at 832-624-2816 or by email at Charlie.kominas@exxonmobil.com.

Sincerely,

Clauler Kominas Charlie Kominas On Behalf of Alaska LNG Project Participants

Hi Caryn,

No worries! I appreciate the opportunity to comment and your patience as you've waited for feedback. I am comfortable with with Alaska LNG's initial survey protocols and don't have any significant changes to recommend. It is very evident that you have been working closely with Jewel to develop appropriate methodologies and the results are appreciated! I look forward to seeing the survey results and working with you further.

Thanks, Jordan

From: Rea, Caryn /SEC Sent: Wednesday, May 20, 2015 1:10 PM To: Romero, Mary R POA; Jewel Bennett (jewel bennett@fws.gov); martin.gayle@epa.goy Cc: Antonakos, Elena A Subject: Wetland Protocols

#### Hello everyone

Attached are the wetlands protocols the Alaska LNG is following for mapping wetlands in the proposed project area. We had a good discussion about this a couple of weeks ago; subsequently we received a request from Mary to forward these along to all of you. Please cascade through your organization as appropriate. Prior to my joining the Alaska LNG team in mid-October 2014, the permits staff met with Janet Post to review the protocols – based on input received, the protocols were revised to the version you see in this attachment. If there are any glaring omissions from the protocols that you think might be a problem for us as we move toward development of an ASA, please do let us know.

1

Otherwise, the team will be moving forward with these protocols this season, to be consistent with prior years. Best, Caryn

#### Alaska LNG air quality modeling approach for Federal Conservation Units Re:

**Dear Jewel** 

The Alaska LNG Project plans to construct several stationary sources of air emissions as part of its plan to construct an integrated project with interdependent facilities for the purpose of liquefying natural gas for export and opportunity for in-state delivery. This letter and supporting documentation, was developed in response to a meeting between the Alaska LNG Project team, the Federal Energy Regulatory Commission (FERC), Federal Land Managers (FLM), and the Alaska Department of Environmental Conservation on April 21, 2015.

The enclosed memorandum and supporting information, outlines Alaska LNG's proposed air dispersion modeling approach for stationary sources proposed to be constructed as part of the Alaska LNG Project, including the Gas Treatment Plant (GTP) on the North Slope, compressor stations along the proposed pipeline, and the Liquefaction Facility along Cook inlet. The approach addresses the modeling and air quality-related analyses that would be required to support the review of the project under the federal National Environmental Policy Act (NEPA). This approach does not address air quality permitting required by agencies that implement the Clean Air Act, although the analyses that are prepared in support of those applications also would be used to support the NEPA process. In evaluating impacts from proposed project sources, this modeling approach considers Federal Conservation Units (Class I and sensitive Class II areas) as nominated by the National Park Service and U.S Fish and Wildlife Service. The U.S. Bureau of Land Management chose not to nominate any Federal Conservation Units as sensitive Class II areas.

Since this modeling approach will serve as the basis of the air quality impact assessment to be provided in Resource Report 9 as part of the FERC application, the Alaska LNG Project requests agency comments by July 15, 2015.

Please contact our Environmental Impact Statement Advisor, Norman Scott, at 907-929-4129 or by e-mail at norm.scott@exxonmobil.com if you have any questions.

Sincerely,

Karen Wuestenfeld

#### Re: Visual/Aesthetics Study Work Plan

Dear Ms. Bennett:

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, ExxonMobil Alaska LNG LLC, and TransCanada Alaska Midstream LP (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce. Proposed Project facilities include a Liquefaction Facility on the eastern shore of Cook Inlet in the Nikiski area of the Kenai Peninsula, which will be supplied by an approximately 800-mile, large diameter natural gas pipeline (Mainline) from the North Slope. The Liquefaction Facility is comprised of an LNG Plant and marine terminal.

Attached is our 2015 study plan to conduct surveys that identify visually sensitive resources that may be impacted by the construction and operation of the Alaska LNG project. The goal of this study is to describe existing visual conditions in the Project Planning Area in support of the Federal Energy Research Commission (FERC) application and subsequent Bureau of Land Management (BLM) and State Pipeline Coordinator's Office (SPCO) permits. In addition to identifying visual viewsheds, the study will address those areas of high recreational use that could be sensitive to changes from construction and operation.

We are available to walk through the plan components with the appropriate U.S. Fish and Wildlife Service Refuge team at your earliest convenience. If you have any questions or information requests, please contact Ms. Caryn Rea at 907.929.4106 or <u>caryn.rea@exxonmobil.com</u>.

Sincerely,

Karén Wuestenjeld

#### Re: Bald Eagle Nest Monitoring in Nikiski Alaska Geotechnical & Geophysical Program

Dear Mr. Muir:

The Alaska LNG Project (Project) conducted monitoring of an active bald eagle nest identified during an aerial nest survey effort between Nikiski and Livengood Alaska on April 24, 2015. The nest location was within an area proposed for shallow seismic activity in support of the Project during May through September, 2015. Information on the nest location and proposed geotechnical/geophysical (G&G) activities was provided to the U.S. Fish and Wildlife Service (FWS) by Ms. Caryn Rea on April 30, 2015. Following discussions with you, a monitoring protocol was developed to guide the observation and collection of data on eagle behavior during the execution of shallow seismic and related activities (surveying, vegetation clearing) within 330 feet of the nest. Due to the developed nature of land parcels surrounding the nest, it was agreed that activity could proceed within a 330-foot buffer zone established by the FWS for nest protection with a dedicated monitor accompanying the field crews.

Monitoring was conducted during pedestrian surveys, vegetation clearing and seismic surveys as well as after the clearing and seismic activities. No adverse or startled behaviors were noted during the activities and one eaglet was observed in the nest before, during and after the seismic surveys.

Attached is a summary report on the behavioral observations during the field project. We have also attached a copy of the Raptor Protocols reviewed with FWS on April 6, 2015 for your files. We appreciate the opportunity to work with the FWS and encourage you to contact Ms. Caryn Rea at <u>caryn.rea@exxonmobil.com</u> with any questions on the attached memorandum.

Sincerely,

e

Joint House and Senate Resources Committee

Alaska LNG Project 10613 West Sam Houston Parkway North Suite 500 Houston, TX 77064

Document No.: USAI-PT-BALTR-00-000010-000

September 28, 2016

Senate Resources Committee Chair Cathy Giessel House Resources Committee Co-Chair Benjamin Nageak House Resources Committee Co-Chair David Talerico

Dear Joint Resource Committee Chairs:

Thank you for the opportunity to provide an Alaska LNG Project update to the Alaskan Legislature's Joint Resources Committee on August 24, 2016. As a follow-up to the meeting, I would like to inform you that the Alaska LNG Project has completed two additional major milestones since we last met.

On August 30, ExxonMobil, as Lead Party, provided the Pre-FEED deliverables to the Pre-FEED JVA Parties (AGDC, BP, ConocoPhillips, and ExxonMobil). The Pre-FEED work created an updated design basis, project execution plan, technology plan, commissioning and decommissioning plans, cost estimate, project schedule, risk analysis and management plan, safety, regulatory and socioeconomic plans and contracting and procurement plans (77 documents, 4,000 pages).

On September 14, the remaining draft Resource Reports were provided to FERC, adding over 3,000 pages to the docket. FERC and the other cooperating agencies are reviewing these drafts and will provide questions and comments that can be used to develop the final Resource Reports.

The Pre-FEED deliverables and FERC Resource Reports, combined with the export authorizations secured last year, provide the foundation for a potential Alaska gas commercialization project. This success is the result of the excellent work by 130 members of the Project Management Team and hundreds of people from dozens of third-party contractors. This work cost about \$500 million and the team performed to the highest safety, security, health, and environmental performance standards.

Plans are in place to wrap-up the Pre-FEED phase, demobilize the Project Management Team, close out the Pre-FEED contracts, and hand off future project efforts to AGDC by year end.

As Project Manager, it has been a privilege to keep you apprised on the progress our team has made on behalf of AGDC, BP, ConocoPhillips, and ExxonMobil.

Sincerely Stur Pyth

#### Alaska LNG NEPA Coordination Meeting Action Items and Meeting Notes January 6, 2015 USAI-PE-SAMOM-00-000030-000

|            | State of Alaska: Mark Morones, Shannon Miller, Don Perrin         |
|------------|-------------------------------------------------------------------|
| Attendees: | Alaska LNG: Karen Wuestenfeld, Ben Wood, Jon Schmidt (telephonic) |
|            |                                                                   |

| Action Items                                                                                                                                                                              | <b>Responsible Person</b>                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| Creation of web mapper (Arch information tool/data portal containing USGS maps, LiDar and aerial maps) and Sharepoint sites.                                                              | Jon Schmidt                                                                                 |
| Identification of state employees (including email addresses) to access web mapper & Sharepoint sites.                                                                                    | Mark Morones                                                                                |
| Follow up meetings between state agency representatives and Alaska LNG to discuss comments and issues identified in the draft resource reports and to discuss the FERC prefiling process. | Mark Morones to coordinate with<br>Ben Wood (after comments have<br>been submitted to FERC) |
| Provide hard copies of maps and related materials from the draft resource reports                                                                                                         | Ben Wood (as requested by Mark<br>Morones for the state agencies)                           |
|                                                                                                                                                                                           |                                                                                             |
|                                                                                                                                                                                           |                                                                                             |

#### Meeting Notes:

Purpose of this meeting was to coordinate with Alaska LNG Project NEPA leads to coordinate state agency comments for the filing of the first draft Resource Reports. Alaska LNG anticipates the release of 12 draft reports by the first week of February 2015. (Resource Report 13 addressing engineering and design for the proposed LNG facility will not be released at this time).

#### Logistics:

Alaska LNG anticipates submitting the draft resource reports to FERC by the first week of February 2015. The reports will be available on the FERC eLibrary and will be posted on a SharePoint site prepared by Alaska LNG. Hard copies of various project maps can be made available in hard copy from Alaska LNG upon request; depending on the volume of requests this could take about a week.

#### **Content:**

Resource Report 1 (general project description) will be similar to the report previously filed in Q3 2014.

The focus of the resource report content will address environmental issues, with a focus on baseline. More technical discussions will be developed for subsequent draft reports, expected to be filed at the end of 2015 or early 2016. State agencies should focus on identifying potential data gaps and potential challenges arising from the reports, including siting, construction, and execution issues.

#### Coordination

SEE action items, described above. Per logistics discussion, Alaska LNG suggested its willingness to hold a meeting with state agencies to discuss FERC pre-filing process and to offer instructions for how state employees can access and utilize web mapper and SharePoint sites.

#### AGENDA

|                                                                                               | AGENDA                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                          |             |                             |               |                                |                                                             |  |

### 2015 Cook Inlet Geotechnical & Geophysical Program

| - |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | · · · · · · · · · · · · · · · · · · · |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| 2 | <ul> <li>2015 Work Schedule &amp; Timing of Authorization</li> <li>NMFS asked for information regarding the planned schedule of operations, including desired starting date. Project representatives communicated that they would like to begin work as early as April if authorizations are obtained and the water is free of ice. A detailed schedule of operations is still being prepared.</li> <li>NMFS indicated that the minimum time period needed to issue an Authorization would be 5 months in the best of circumstances. Jolie Harrison identified several risks associated with the Project that could delay the authorization, including: the decrease in beluga population, location and timing of activities for this particular program, and current litigation regarding activities in Cook Inlet. NMFS communicated that upon receipt of a complete application, the Project should anticipate 5 months minimum for authorization, and likely not until June if they receive the application fairly soon.</li> <li>NMFS advised that the Project should consider optimizing how the different equipment (some of which requires IHA and some of which does not) can be utilized throughout the work area to accomplish the Project objectives while avoiding known sensitivities (i.e. summer feeding areas for Cook Inlet Belugas, set net seasons, etc.). Barbara Mahoney indicated</li> </ul> | Alaska LNG<br>Project Team            |
|   | that NMFS might be able to issue a Letter of Concurrence for the<br>proposed work around Nikiski.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                       |
| 3 | <b>Clarification of IHA-triggered work activities</b><br>Project representatives initiated discussion about removing the<br>geotechnical borings from the IHA – at least for any authorization<br>requested. NMFS indicated no issue but stated it was the Project Team's<br>decision to make. The Project representatives concurred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Alaska LNG<br>Project Team            |
| 4 | Marine Mammal Monitoring<br>Greg Balogh asked at what sea state marine mammal monitoring would<br>stop (would be effective to) given the ZOI radius of 2.5 kms distance from<br>the vibracoring. The Project stated that they intend to have marine<br>mammal observers on the geophysical vessel (which conducts the<br>vibracores) but not the geotechnical vessel (jack-up). Other means for<br>observing are not currently under consideration for this work program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | N/A                                   |
| 5 | <b>ESA &amp; EFH Consultations</b><br>NMFS confirmed that they are aligned with the Project's proposed<br>provision of supporting documentation for the Endangered Species Act<br>(ESA) and Essential Fish Habitat (EFH) consultations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Alaska LNG<br>Project Team            |
| 6 | <b>Cook Inlet Beluga Critical Habitat Sensitivities</b><br>NMFS said that based on their whale tagging program, they know that the<br>Cook Inlet beluga whales are spending most of their time at three<br>locations: Susitna river delta, Knik Arm, or Chickaloon. In the summer, the<br>whales are above the first fathom of the water column. In winter, they are<br>swimming lower (below first fathom). Previous authorizations (i.e. Apache)<br>have prohibited taking of belugas in groups larger than 6 because it is<br>assumed that those groups would have calves. NMFS may require group<br>size limitations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | N/A                                   |

### 2015 Cook Inlet Geotechnical & Geophysical Program

| 7 | <ul> <li>Project NEPA schedule &amp; NMFS alignment to FERC schedule</li> <li>Project representatives clarified that the requested authorization being discussed at the meeting is for a field engineering survey program (not for the full Alaska LNG Project).</li> <li>NMFS inquired about the overall Project schedule with respect to NEPA timelines, including the drivers for FERC's schedule. The Project representatives responded that the Project is currently midway through the FERC Pre-File process. NMFS indicated that they planned to meet with FERC to be updated on the Project timelines.</li> <li>NMFS may choose not to be a cooperating agency for the Alaska LNG EIS.</li> </ul>                                                                                                                                                                                                                | NMFS                       |  |

| 8 | <b>Pipeline Route Selection for Cook Inlet Crossing</b><br>NMFS inquired about how the pipeline routes across Cook Inlet were<br>selected. Billy Oliver confirmed that the two routes are being carried<br>forward for further study and analysis, and that the Cook Inlet<br>Geotechnical & Geophysical (G&G) program (the subject of the meeting)<br>would help the Project optimize these routes to technically propose the<br>primary route for Project development. The data collected in summer 2015<br>will be incorporated into the second draft Resource Reports, submitted to<br>FERC as part of the Project application.                                                                                                                                                                                                                                                                                      | N/A                        |  |
| 9 | IHA Application – Vibracore<br>Project representatives communicated that use of the vibracore along the<br>pipeline corridors to fill data gaps will be included in the IHA application.<br>The majority of the vibracore samples would be along the potential<br>pipeline corridor centerline, and then vibracores will also be acquired at<br>places off the pipeline corridor centerline as determined during the<br>operation as live-feed data is acquired from the other geophysical activities<br>and assessed onboard the geophysical vessels. The vibracoring occurs for<br>a very short duration (seconds to minutes, and up to10 minutes depending<br>upon substrate) with several vibracores attempted each day.<br>The Project team is working to identify opportunities to optimize the<br>vibracore work scope to more accurately reflect the potentially ensonified<br>areas in terms of space and time. | Alaska LNG<br>Project Team |  |

### 2015 Cook Inlet Geotechnical & Geophysical Program

| 10 | <b>IHA Application – Jack-Up Platform for Geotechnical Borings</b><br>The Project representatives explained that the jack-up platform (Skate 3) to be used for the geotechnical borings will be smaller and quieter than oil & gas exploration & production rigs. Data from the Spartan rig was used to assess the extent of ensonification, which is overly conservative but is the only data available for Cook Inlet. The proposed equipment (Skate 3 jack-up) is modular and will be towed into place, then four legs lowered to the seafloor for stabilization and the platform jacked up out of the water (minimizing contact with the seafloor for transfer of noise or vibrations). Further, the jack-up platform will have very minimal equipment onboard with no deep well pump. No sound source verification (SSV) is planned for the jack-up rig. No marine mammal observers will be located on the jack-up due to safety limitations (small work space and vessel to jack-up transfers required for personnel). | N/A |  |

#### NORTH SLOPE GAS TREATMENT PLANT – PSD MONITORING APPROACH

| 6 | AKLNG proposes to rely upon A-Pad 10-meter meteorological data for modeling. ADEC indicated that using these data sets would be acceptable as long as GTP stack heights were less than 60 meters. If stack heights exceed 60 meters, AKLNG would need to justify use of the 10-meter data set for this application.  | AKLNG to review its<br>proposed stack heights<br>and determine if a<br>separate justification is<br>required. |  |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|--|
| 7 | AKLNG discussed the possibility of collecting tall tower<br>meteorological data from a separate site. ADEC would support<br>this option, particularly if stack heights exceed 60 meters. If this<br>approach is considered, meteorological monitoring would be<br>required to meet EPA and ADEC monitoring guidance. | AKLNG to determine if<br>tall tower meteorogical<br>data collection are<br>needed/desired.                    |  |
|   |                                                                                                                                                                                                                                                                                                                      |                                                                                                               |  |

| 1         | Overview of WSA Process  |                             | schedule for 2015 so that the tear<br>February meeting with the USCG.<br>would be good to emphasize that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ed overview of the WSA process and<br>m was familiar in advance of an early<br>Shannon Miller mentioned that it<br>the WSA is one of a number of state<br>in place to ensure safety, security, |  |
| 2         | 2 Stakeholder Engagement |                             | Group discussed the importance of engaging the right individuals to<br>contribute to the WSA process. The Group reviewed a list of<br>individuals that may be asked to participate in the WSA process via<br>participation in the technical risk assessment, or by the opportunity to<br>participate by public comment. Don Perrin mentioned it would be<br>worth identifying the location of the Cosmopolitan oil and gas lease<br>(operated by Bluecrest Energy). Shannon Miller mentioned that Cook<br>Inletkeeper may be considered as a stakeholder that could be added<br>for consideration. The group discussed the requirements of federal<br>consultation with tribal governments (in this case USCG to tribal<br>groups). |                                                                                                                                                                                                |  |

| 6    | Security Scenarios                 | USCG asked if the WSA includes consideration of security events.<br>Dave Moore responded that the WSA will be assessing security threats<br>in addition to public safety scenarios. The WSA consultants will<br>discuss with USCG in advance of the WSA workshop how other WSA<br>projects have assessed such threats. The risk assessment<br>methodology proposed to be used is an API standard that meets the<br>requirements of the NVIC.                                                                                                                                                                                                                                                                                                                                                                                                          |
| 7    | Upcoming WSA Meetings              | The group discussed the approach for upcoming WSA meetings,<br>including introductory meetings with the technical assessment group<br>and stakeholder representative groups as well as preparation<br>meetings between USCG and the Alaska LNG Project representatives.<br>USCG suggested that participants in the upcoming WSA introductory<br>meetings may need additional time for providing their input and<br>should be allowed a comment period after the meeting but before the<br>WSA workshop. A comment period of approximately 30 days was<br>suggested and will be pursued. Upon receiving these comments, the<br>USCG and the Alaska LNG Project representatives will meet to review<br>and incorporate comments as applicable in the preparations for the<br>WSA workshop, which will be attended by the technical assessment<br>group. |
| 8    | Scheduling of WSA Meetings         | USCG suggested moving the proposed WSA introductory meetings to<br>a week other than the week of March 16, since that is spring break for<br>local schools and may limit participation. It was noted that USCG will<br>also be engaged in meetings with the FERC during the week of March<br>9 regarding the Alaska LNG Project Pre-File report reviews. Alaska<br>LNG representatives will propose a new schedule of meetings and will<br>arrange venues.                                                                                                                                                                                                                                                                                                                                                                                            |
| 9    | WSA Meeting Coordination, Planning | The USCG clarified that USCG would lead and facilitate the<br>stakeholder engagement meetings. Alaska LNG will assist with<br>meeting logistics and preparations. USCG requested one or several<br>pre-meetings to coordinate with the Alaska LNG representatives.<br>Alaska LNG Project requested a meeting with the USCG in advance of<br>the WSA workshop in order to review current emergency response<br>protocols, security procedures and capabilities.<br>It was agreed that this meeting was necessary and will be scheduled.                                                                                                                                                                                                                                                                                                                |
| 10   | Project Schedule                   | LT Chung requested an updated schedule of upcoming WSA meetings.<br>Project representatives will provide a revised project schedule to<br>USCG.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 11   | Security Zones                     | Alaska LNG Project inquired about the security/safety zone around<br>existing Kenai LNG facility. Project and USCG agreed that this and<br>other existing protocols would be subject of preparation meetings<br>before WSA workshop.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 12   | Document Sharing via Home Port     | USCG will setup a Home Port page for sharing documents related to Alaska LNG Project WSA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 13   | SSI Non-Disclosure Agreements      | Alaska LNG personnel and the Technical Assessment Team members will be required to sign SSI non-disclosure agreements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 14   | Sub Area Committee Meeting         | USCG requested that the Project present at an upcoming Subarea<br>Committee meeting on May 19 (presentation would cover WSA<br>activity). LT Chung indicated that he would get in touch with LT Matt<br>Mitchell to arrange.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 1    | Overview of GIS Web Mapper                | Jason Knier from exp Energy Services (consultant to Alaska LNG<br>Project) provided an overview of how to utilize the GIS web mapper<br>set up to provide agency personnel access to Alaska LNG Project data<br>submitted in the 1st Draft FERC Pre-File Resource Reports.                                                                                     |
| 2    | Overview of Agency Sharepoint Site        | Vintrisa Young from exp Energy Services (consultant to Alaska LNG<br>Project) provided an overview of how to utilize the SharePoint site for<br>agency personnel to access the Alaska LNG Project 1st Draft FERC<br>Pre-File Resource Reports.                                                                                                                 |
| 3    | Meridian, Township, GIS Coordinates       | Shannon Miller/SPCO asked about whether meridian & township<br>information would be available on Web Mapper. Answer: coordinates<br>and community locations can be found through search field at upper<br>right-hand corner of the Web Mapper screen.                                                                                                          |
| 4    | Cultural / Archaeology                    | Tim Hammond (BLM/archaeologist) asked about sensitive cultural resource data. That information will be available at a separate location on the website with restricted access to BLM/Archaeologists & SHPO. Subsistence data has not been collected or presented yet in the Project Resource Reports, so that information will not be found in any web mapper. |
| 5    | URL Sharing/Emailing                      | Earle Williams (BLM) asked about the ability to capture URL<br>information off Web Mapper to share. That function is not available -<br>viewer must email screenshot, or can refer a colleague to a particular<br>map book view corresponding to the resource report submittal.                                                                                |
| 6    | Bookmarks                                 | Mark Morones (DNR-OPMP) asked about whether individual bookmarked captures on the map would contain layer information (similar to preset bookmarks). Answer is yes.                                                                                                                                                                                            |
| 7    | Pipeline Corridors and LNG Study<br>Areas | Ben Wood communicated that the pipeline corridors and area of study<br>at the LNG Plant are wide/large corridors/areas because the project<br>has not determined final pipeline route alignment nor the final location<br>of facilities at LNGP.                                                                                                               |

| Decident                                      |                    |                  | Commonsiel Ficking Cohodulas                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 1                                             | Introductions      |                  | Stopped at ADF&G office for personal introductions with Pat Shields, who has been contacted several times as part of permit requirements to consult ADF&G on commercial fishing seasons for marine / Cook Inlet work scopes. (Most recently Pat was consulted regarding upcoming ASL metocean work planned for April).                                                                                                                                                                                                                                                            |
|                                               |                    |                  | Claire Joseph showed Pat the map of proposed Project G&G activities<br>in work areas in Upper and Middle Cook Inlet for summer 2015 and<br>explained the types of activities to be conducted in the area. Pat<br>Shields indicated that the fishermen may be concerned about "<br>explosions" in the water and the potential impacts of the sound on the<br>fish. Claire Joseph communicated that this program is not of same<br>magnitude as large geophysical exploration program and further<br>described the types of work to be conducted near the marine terminal<br>sites. |
| 2 Fishing Schedule Resources,<br>Publications |                    | sources,         | Jeff and Claire inquired about the resources available to be updated on<br>fishing seasons/openings/closures (besides the regulation or calling<br>ADF&G directly). Pat mentioned a Cook Inlet Outlook that will be<br>published for 2015 as a good reference. It is anticipated to be<br>available in next few weeks. Pat also encouraged Project<br>representatives to contact ADF&G Commercial Fishing and/or to call<br>into the line that is managed /updated several times a day during<br>fishing season (+1 907 262 9611).                                                |
|                                               |                    |                  | Claire Joseph indicated that the Project would be reaching out to<br>leaseholders and that the permitting process would also prompt<br>agency contact/notification of leaseholders. Pat recommended<br>engaging with the Kenai Peninsula Fishermen's Association.                                                                                                                                                                                                                                                                                                                 |
| 3                                             | Fishing Schedules  |                  | Pat explained that in Upper Cook Inlet, only shore fishing is allowed.<br>Drift net and set net fishing is not allowed. In Upper Cook Inlet,<br>fishing during salmon season (July 8-Aug 15) is only allowed on<br>Mondays and Thursdays.                                                                                                                                                                                                                                                                                                                                         |
|                                               |                    |                  | In Middle Cook Inlet, drift net, set net, and shore fishing is allowed.<br>There are about 450 set netters in and around Soldotna / on the east<br>side of Cook Inlet. Fishing is not allowed on Fridays (to "prepare" for<br>the weekend). Pat indicated there may be a deviation from the<br>management plan which would then limit fishing to a certain number<br>of hours during the week (any day) rather than restricting to Mondays<br>and Thursdays. This deviation has not been determined/confirmed<br>yet for this season.                                             |
|                                               |                    |                  | Pat re-iterated that review of shore fishery leases only reveals some<br>of the potential fishermen that will be working in that area - those<br>that are willing to pay to reserve a section of beach. People may<br>choose to fish in areas without acquiring fishing leases and Project<br>representatives should anticipate to see and interact with fishermen<br>even in areas with no fishery leases.                                                                                                                                                                       |

| Item                     | Agenda                         | altem                       | Desc                                                                                                                                                                                                                                                                                                                                                                                                                                  | ription       |  |  |
| 1                        | Buffers for Anadromous Streams |                             | (ADF&G) inquired what the work offset / buffer is for streams. Jeff<br>Raun re-iterated that the planned work scope will not be located near<br>anadramous streams, and therefore will not require a buffer, but that<br>the buffer discussed last year with Patty Berkhan was 150 feet.                                                                                                                                              |               |  |  |
| 2                        | State Game Refuge              |                             | Inquiry whether the work near the state game refuge will be in<br>uplands or tidal lands, and if the work is conducted in the uplands,<br>that the DNR would issue the relevant permit. Alana Smith indicated<br>that the Project was still working on jurisdictional determinations.                                                                                                                                                 |               |  |  |
| 3                        | Kachemak Bay Anchorage         |                             | (ADF&G) inquired about vessel activity in Kachemak Bay area, and expressed that there would be permits required in the critical habitat area in Kachemak Bay for anchorage.                                                                                                                                                                                                                                                           |               |  |  |
| 4                        | Kenai Peninsula Bluffs         |                             | <b>Inquiry</b> regarding the inter-tidal work at pipeline shore crossings, whether the project would be cutting into the bluff. Alana Smith communicated that she would include that detail in the scope of work for permit application.                                                                                                                                                                                              |               |  |  |
| 5                        | KPB Floodplain Permitting      |                             | <b>Project</b> inquired how the flood plain aspect should be addressed in terms of permit submissions. (KPB) indicated that the project should submit the temporary land use permit, and that would be forwarded onward to the appropriate individuals, including the flood plain advisor. Harmony Curtis indicated that the multiuse/agency form would be accepted for documentation.                                                |               |  |  |
| 6                        | Public Engagement              |                             | <b>Project</b> indicated that the Project would engage community and other local stakeholders through an open house about the summer field programs, leadership meetings, and engagements with private landowners and leaseholders. Shannon Miller inquired whether the open houses would be posted on the ak-Ing.com website. Jeff Raun confirmed that yes, the public meetings/information sessions would be posted on the website. |               |  |  |

|                                |                      |                   | John Taylor presented a safety moment about avalanches.                                                                                                                                                                                                                                                                                  |
| 2                              | Project Overview     |                   | Ed Stokes provided a project overview (including project scope and schedule) and described the role of the marine team in supporting the project                                                                                                                                                                                         |
| 3                              | ERVA and MOM         |                   | Dennis Maguire presented an introduction to the project's planned<br>emergency response and vessel assurance (ERVA) program and<br>marine operations management (MOM).                                                                                                                                                                   |
|                                |                      |                   | USCG agreed that increased vessel traffic during construction is an important topic. CDR Decker referred to a recent presentation from ASAP regarding barging at the Alaska Eskimo Whaling Commission (AEWC) meeting.                                                                                                                    |
|                                |                      |                   | CDR Decker expressed appreciation that the Project was being proactive in engaging regarding this topic.                                                                                                                                                                                                                                 |
|                                |                      |                   | CDR Decker recommended starting with review of existing regulatory requirements for vessels carrying cargo coming into waters - requirements for spill response/pollution/etc.                                                                                                                                                           |
|                                |                      |                   | CDR Decker recommended that the Project reach out to Alaska Marine Exchange, which provides service of vessel tracking and monitoring via AIS. USCG is the main benefactor of the model; model has been vetted and approved by the USCG. Captain Ed Page is the point of contact.                                                        |
|                                |                      |                   | Group discussed need for communication of project scope so that the USCG could assess resourcing. CDR Decker shared that Sector Anchorage and Sector Juneau are the only two sectors in the USCG which are growing in staff                                                                                                              |
|                                |                      |                   | LT Chung commented that USCG is working to make Cook Inlet Ice Guidelines regulation (CFR).                                                                                                                                                                                                                                              |

| Item | Agenda Item   | Description                                                                                                                                                                                                                                                             |
|------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4    | Forward Plans | CDR Decker supported the idea of regular meetings from March -<br>August so that the project could develop its Pre-FEED deliverable on<br>ERVA/MOM. Ed Stokes responded that the Project would reach out to<br>schedule meetings when content was ready for discussion. |
|      |               | CDR Decker requested that the Project focus discussions with the management at Sector Anchorage rather than reaching out to individual units.                                                                                                                           |
|      |               | LT Fitzgibbons offered to provide Alaska LNG team with tour of the command center for emergency response. Alaska LNG team requested to please visit command center during next visit.                                                                                   |
|      |               | Group agreed that LT Chung and Claire Joseph would be the single points of contact between the two organizations.                                                                                                                                                       |

| 1    | AKLNG provided project overview to ADEC Air Quality Director using publicly available documents (recent legislative briefings, etc)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Pfeiffer          | 13:00 |  |  |  |
| 2    | ADEC Air Quality Program Leadership provided initial thoughts about<br>Project:<br>ADEC interested in general location of compressor stations and when<br>more certainty of location may be available, general answer provided, no<br>need for specific follow-up;<br>Schedule for project permitting occurs during scheduled (but possibly<br>delayed) Alaska update to EPA BART (Best Available Retrofit<br>Technology) Plan for regional haze- AK LNG major facilities will be<br>subject to BACT rather than BART, but could be included in broader<br>conversation regarding visibility cumulative effects. BART Plan will be<br>open for public comment and Federal Land Manager (FLM) review.<br>Proximity of Nikiski operations to Tuxedni NWR likely to result in FLM<br>consultation. USFWS and USPS have central air experts in Denver, but<br>better to allow local FLMs to provide conduit to the central resources<br>(John Notar/Tim Allen). In general, ADEC felt that visibility impacts in the<br>vicinity of project facilities has been to date minimal;<br>Agency Resource Considerations: Availability of ADEC Permitting<br>Resources may be challenged during the time frame for permitting by<br>the retirement of senior/long-tenured staff; Alan Schuler identified as<br>one of those resources, who typically is involved with FLM consultation<br>(as well as modeling protocols); Patrick Dunn, Anchorage Construction<br>Permits Supervisor, likely a key person to have involved as plans<br>progress (less likely to be in near-term retirement pool); Similarity of<br>facilities (i.e., pump stations) will help reduce effort required;<br>Staging/front-end loading of permit activities (early modeling protocols,<br>applications, etc) will be very helpful. Keeping ADEC Air Quality<br>updated on overall project plans and timing very desirable- tough for<br>ADEC to ramp-up staff, easy to overwhelm;<br>No facilities in the Fairbanks PM non-attainment area, but effects of<br>construction such as logistics, pipe coating facilities etc may be subject<br>to conformity review to ensure the activities do not interfere with<br>attainment strategy;<br>Broad use of inc | Kuterbach/Edwards | 13:45 |  |  |  |

| 1    | Welcome and Purpose                                                  | USCG welcomed the group and provided overview of purpose of meeting. Participants introduced themselves and their roles/ organizations.                                                                                                                                                                                                                                                                             |  |  |  |  |
| 2    | Alaska LNG Project Overview                                          | Lydia Johnson presented an overview of the Alaska LNG Project.                                                                                                                                                                                                                                                                                                                                                      |  |  |  |  |
| 3    | Introduction to the Waterway<br>Suitability Assessment (WSA) Process | Brad Fuller provided overview of the WSA process.                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |
| 4    | Waterway Characterization                                            | Tim Robertson provided overview of the characterization of the waterway (Cook Inlet) to be used by the LNG Carriers during Project operations.                                                                                                                                                                                                                                                                      |  |  |  |  |
| 5    | Cooperation with Drift Fishing Vessels                               | David Martin (UCIDA) commented that he represents more than 500 vessels and fishermen that participate in drift fishing, and that they are interested in developing cooperative relationship that addresses the needs of the fishing and LNG industries.                                                                                                                                                            |  |  |  |  |
| 6    | Question about Pipeline Route                                        | Chad Fullmer asked why there are two pipeline crossings across Cook<br>Inlet, and whether the pipeline will be built above ground, or will be<br>buried. Lydia Johnson responded that the Project is studying potential<br>crossings of Cook Inlet and that only one route will be selected. She<br>confirmed that the pipeline will be buried for most of the route, but<br>there will be some areas above ground. |  |  |  |  |
| 7    | Question about Facility Siting and<br>Hunting                        | Cody Howard asked if the proposed liquefaction facility is in a hunting<br>area used by Alaska Natives. Claire Joseph responded that social and<br>environmental impacts are being addressed via the NEPA process<br>(including FERC Pre-Filing).                                                                                                                                                                   |  |  |  |  |
| 8    | Question about Vessels in Kachemak<br>Bay                            | Dan Belanger asked if a maximum number of vessels using the<br>anchorage behind the Homer Spit has been established. It was<br>confirmed that anchorages<br>have not been established.                                                                                                                                                                                                                              |  |  |  |  |
| 9    | Conclusion                                                           | John Farthing provided the participants with an overview of the USCG<br>HomePort site. CDR Cintron thanked everyone for their participation<br>and indicated that the USCG would provide further communication.<br>Participants were encouraged to provide comments/concerns in<br>advance of WSA workshop in May.                                                                                                  |  |  |  |  |

# **BLM GRAVEL SUMMIT -** Minerals Materials Management in the Dalton Corridor, March 31, 2015: 8:30am-4:30pm

#### Action items in RED

#### PowerPoint Presentation: Rob Ellefson, BLM Gravel Summit - Intro

-introductions

-Rob overview of objectives of meeting, corridor, existing Utility Corridor ROD

#### PowerPoint Presentation: Shelly Jacobson, BLM The Dalton Highway A Brief History

Shelly discussed history of Dalton Highway

Described the difference between commonly used terms:

- Utility Corridor as described in public land order (PLO) 5150
- Trans-Alaska Pipeline (TAPs) right-of-way (54 feet),
- Dalton Highway right-of-way 'Corridor',
- five-mile corridor closed to off-highway vehicle (OHV) use by the State,
- Alaska Department of Fish and Game (ADF&G) no firearm use Corridor.

Mostly talking about BLM planning corridor established by PLO 5150. Talked about history of corridor and road, issues, land ownership, development nodes etc.

#### PowerPoint Presentation: Tim Hammond, BLM Gravel Summit - Intro

Tim did presentation on RMP process purpose and required planning decisions Discussed possible alternatives under the RMP, in general: Terms and conditions, Areas that could be opened or closed to Mineral Material development

# PowerPoint Presentation: Division of Geological and Geophysical Surveys (DGGS) - DeAnne Stevens, Trent Hubbard Dalton Highway, Geology Overview.

Existing resources and potential

- Surface geology (Trent DDGS):
  - southern corridor generally south of mile post (MP) 150, soft weathered bedrock covered with loess, limited sand and gravel
  - north of ~MP 150 (Prospect Creek) to North of the Brooks Range ~MP 275: glacial and glaciofluvial
    - MP150-175: older glacial deposits, highly weathered, isolated sand and gravel, limited and unexplored until you move into the Koyukuk Drainage.
    - o MP175-275 glacial and flaciofluvial
  - North of 275 to coastal plain marine and lacustrian sediments and poor quality as construction/engineering resource

Three mapping studies going on now by DDGS

Engineering maps done for TAPs; confidential material, DDGS has access and can distill information from data if needed by BLM.

-Available Data DGGS finds useful includes:

- Guide Book 4 (Brown and Kreig, 1983) has a lot of info about corridor (<u>http://pubs.dggsalaskagov.us/webpubs/dggs/gb/text/gb004.pdf</u>)
- Tom Hamilton (Hamilton, T.D.) has a variety of books on the area. USGS/ADGGS/Contract Geologist
- Kreig and Reger (Geologic Report 66), 1982, DDGS
- all above studies available on DDGS website

-BLM needs the engineering geology data. BLM has taps borehole data. DGGS has borehole data on Alaska Natural Gas Transportation System ANGTS and other data.

-Old data on older gas line projects may be available from Alaska Stand Alone Pipeline (ASAP) -Trans Canada part of Alaska Liquefied Natural Gas (LNG) project, Alaska LNG has Trans-Canada data

-Geophysical data is of interest to BLM also

#### **PowerPoint Presentation:** Alaska Department of Transportation and Public Facilities (ADOT&PF) - Kevin Maxwell Dalton Highway Materials from construction standpoint

3 types of materials are needed for road bed construction, generally from different sources:

- Bottom 4-6 ft: 'Leveling Fill', mineral soil w/little organic and no ice (dry), needs to be comp-actable, called Borrow material (i.e., – any quality meeting the specifications for levelling fill)
- 2. Middle 3 ft: 'Select' material, sand and gravel with low silt content. Non-frost susceptible
- Top 6" (?) Crush Material Layer: -crushed material used for gravel surface road or subsurface for paved. Needs to be tough/durable to take loading. Needs to be compactable (that's why crushed) with up to 20% silt, and at least 5-10% greater than 1" size. Can have substantial amount of silt; primary need is tough gravel that is crushed.

#### Material sources

-It is ideal to have source within project limits; every 10 miles w/in the project length. Partly cost and partly logistics of managing traffic. Time to haul material must be short enough to complete

annual construction segments – haul too far and individual phases take multiple years. Project haulage traffic has wear and tear effect on road. Keeping haul w/in project reduces wear and tear on other parts of the road

**Borrow**: Southern portion of BLM corridor often find borrow material in soft bedrock Yukon R. (MP56) to MP 175. Northern half (MP 175 north) of corridor borrow pits are sited in alluvial material. Alluvial fans in the north may have silt contents of 30% (which is too much) so a singular source to supply borrow may have high silt content. Gravel may be quite soft so typically does not make good crushable source.

**Select** Materials: For select material look for places with active river action w/in floodplain or alluvial terraces (old floodplains). More durable materials, with less silt are needed e.g., Deitrich River. Also need a gravel bar large enough to accommodate a pit. May also be able to get crushable source if the gravel is hard/durable enough and in high enough proportions.

Floodplain sources tend to be self-reclaiming. Want work on bar isolated from active channel. Might dig down to water level, keep source isolated in island until work is done. Another benefit is if hole is deep enough to stay thawed during winter, may create overwintering habitat for fish. Once work is done, open channel upstream and

Tuesday, March 31, 2015

downstream of pit and allow river to start reclaiming. Best management practice (BMP) is to locate material site at downstream point of island and work upstream.

Negatives in working in active channel: River can breach pit and move its channel. One example is a high value sand stockpile at MP 222.7 with 60,000 yards or more, stranded w/in the Dietrich River channel for at least 20 years. DOT has an upcoming project that might be able to use this material soon if river conditions and permitting allows.

**Crushable** material out of alluvial site: Easier to get from upland sites, but not a prevalent as active channel sources. Some projects might have no alluvial terraces w/in project boundaries.

#### Present Maps:

#### Potential Road Projects in Utility Corridor

Remember that these are anticipated projects, and not necessarily already funded/authorized through the State process

- MP 55-90 Reconstruction (Yukon River to Finger Mt.): 2020 and beyond for starting date
- Dalton HWY MP 109-144 Rehabilitation [Old Man Camp to Jim river]: 2019 possible starting date
- Dalton HWY MP 209-235 Reconstruction [Dietrich Camp to Chandalar]: Start date likely 2017
- Dalton HWY MP 235-247 Reconstruction (Chandalar Atigun): 2020 and beyond for starting date
- Dalton HWY MP 274-289 Rehabilitation [Toolik]: 2015
- Dalton HWY MP 289-305 Rehabilitation: 2017
- New Yukon River Bridge Reconnaissance Study: 2015
- Roche Moutonnée Bridge Replacement (MP265): 2016

#### General sources of material w/in corridor; these were displayed on maps.

#### 3 geologic units

- green color on map: alluvial fans, good borrow, prevalent in north part of corridor, but virtually absent in the south. But south has soft bedrock sources. <u>Can find borrow almost anywhere in the corridor.</u>
- magenta color on map: active channel. many active channels, but need a large enough island and a way to get a road to it. Also, permitting is more complicated if the river is navigable.
  - red dots on map: hard bedrock - Some of these may also work as riprap sites. High quality resources for durable riprap are generally limited in corridor.

#### Questions

Hard bedrock sources are those referred to as quarries? Yes. Usually requires blasting.

- Southern sites w/in 30 to 40 miles of Yukon River crossing, can these be used for riprap? Not sure, but it would be a good place to sample for it. Sometimes bring riprap up from Fairbanks when bringing equipment up from Fairbanks
- Riprap is unique product and when needed is essential, also use smaller amounts, so more practical to haul than sand or gravel
- What kind of permitting is BLM doing for sites determined navigable? Access road only

- Timeline for recharging floodplain material sites? Won't refill pit with material that could be mined later on w/in lifetime, but can restore the river to its normal configuration in shorter timeframe.
- How are road sections planned and funded, keeping in mind haul length and known sources? How are they planned and then how are they funded? Magnitude of job, how much new material, how will it be mined, will be used to develop estimate for job to get funding from legislature. But contractor might come in with lower or high bids. Will contractor be directed by DOT to plan work to fit with the estimate from legislature? WILL COVER LATER UNDER USER DISCUSSION
- Is material cost is small part of total cost? What is the royalty cost? BLM free, DNR 50 cents per yard. Major cost is hauling. Royalty cost as part of overall project is typically very small, but depends on where the material comes from.

#### **Return to PowerPoint Presentation: DGGS - DeAnne Stevens, Trent Hubbard** *Dalton Highway, Bedrock geology and potential for material sources within 1 mile of Dalton Highway*

#### DeAnne - Bedrock Geology

DISCLAIMER: Data presented is not a final product and is really meant as an informal discussion. Data quality is affected by poor scale of geologic mapping (regional vs. local), map edge 'border faults', and lack of detailed information.

#### Generally:

- bedrock sources south of Brooks Range metamorphosed (fractured, baked), north of Brooks Range less processed and softer.
- detailed geological maps available for portions of corridors in PowerPoint
- Generalized bedrock categories: presented in decreasing quality of material for road purposes (colors refer to map display)

Igneous - red - riprap Carbonate - blue -riprap Quartz rich - gold Mixed beds - yellow - potentially useful Generally unsuitable or unknown - purple

Potential sources of **riprap** Livengood to Bettles quad 2 sites existing. Bettles Quad - one crushed stone riprap site; lots of other potential sites Upper Bettles Quad - less potential Wiseman Quad - 2 quarries in this quad, but limited Chandalar Quad - some potential, but more limited Galbraith Lake - fewer and fewer bedrock sources as you head north.

Approximate mile marker where bedrock sources drop out dramatically MP275, near Galbraith Lake. MP 355 is approximate location of the last mappable unit of bedrock w/in 1 mile of highway.

More detailed info needed includes material related parameters e.g., info on weathering, joints, engineering information. Landform analysis needed.

#### Questions

Does DGGS communicate with Samantha Carroll (Large Project Coordinator with ADNR)? Yes go through Samantha and she will distribute to DGGS.

Is MP 261 potentially best source of Riprap bedrock? At times this material is exported all the way to Prudhoe Bay due to its durability? Yes. BLM wants to make this material available/noted high interest in this material.

At what point do you chose to change material specifications vs. hauling from a long distance? The answer is complicated. Rock must have the quality needed. Try to design projects to take advantage of what is locally available, but don't always know what is available w/out testing.

How much processing of materials is acceptable to ask for from the contractor? If you do enough processing, can we get all 3 materials out of one source? Does not make sense to process a high value material resource to make common borrow. Agencies prefer to use the source for its best value. Processing can create other issues like water quality or the amount of water needed for processing.

BLM would like to know what is the tradeoff between more processing vs approving more material sites. BLM would like to get past the first reaction that all that matters is cost and be able to discuss other options.

Cost is of concern, because if one project is very expensive, it may preclude other projects. There is limited funding from the legislature.

DOT sets parameters for bidding. How does DOT set these parameters? What level of exploration is done before going out for bids? Typically DOT will do some drilling before and want high level of confidence that material exists. But contractor can choose not to use the suggested sites.

If contractor chooses to use other sites, then they need permit from BLM for these other sites. This is a concern and a workload for BLM.

Does DOT puts together contract packages with assumptions that materials are available on BLM-managed lands? Yes. Ideally DOT will have permitting for these material sites well in process before going out for bids on a project.

**PowerPoint Presentation: Rob Ellefson** *BLM Gravel Summit - Current Use and Management, Modified (presentation was modified following meeting for numerical clarity, notes below are from presented slides)* 

Within the Utility Corridor there are:

- 52 current material sites (existing, approved but not used yet)
  - 25 sand and gravel
  - 20 rock pits
    - o 5 riprap
    - o 15 common rock
- 7 exploration sites application for new material site, tentatively platted, may being drilled
- 74 BLM permits are currently being managed. Spreadsheets on walls

- o 49 ADOT Free Use Permits (FUP)
- o 23 Alyeska Pipeline Services Co. (APSC)
- o 4 exploration permits
- o 2 contract sales (cost recovery)

Currently there are two major users - ADOT and APSC

Sites can have more than one authorization. There are currently 20 dual use sites. These have their own issues such control and ownership of produced materials (possibility of theft/trespass), responsibility for trash and other items onsite, contractors working for both APSC/DOT at different times in same pit.

Amount of Material used:

ADOT - approximatly 1.5 million cubic yards (over 8 yrs) APSC - 380,000 cubic yards (10 yrs) Other - 22,000 cubic yards (8 yrs)

Question: Do these numbers include materials from State owned material sites? There are a couple of state sites, Marion Creek, Coldfoot, etc. that are not included. State DOT has 30-31 BLM sites along the corridor. Not all are being used. Some are very small.

Discussion of APSC access roads, maintenance of access, and erosion control.

Fill material for old camp pads, could be resold. Can things that are decommissioned be recycled rather than just reclaimed? Can APSC resell materials for repurposing rather than reclaiming?

- 2.5 million cubic yards mined from BLM since 2004
- 2-4 material sites active each year
- Site authorized on average every five miles on Dalton. This is on par with Elliott and Richardson highways.
- Of 45 authorized sites, at least 18 have seen no production during the 10 year permit period. Some sites have not been used for decades. BLM would like to discuss this more and give consideration to closing some of these sites

#### Future use in Corridor

Comment: Need to go back and look at numbers during pipeline and road construction to get a better idea of what is needed for future projects like ASAP and AK LNG. Generally, commenter feels that these projects (as well as TAPS initially) underestimated amount of gravel needed and impacts of the gravel extraction.

APSC use of materials is pretty level now. Do not anticipate large surges in needs, unless there is a large flood event.

Was there an analysis of gravel use for TAPS 30 year ROW renewal? This would be a good source of data to check on.

ADOT Comments on their future use/needs.

#### Tuesday, March 31, 2015

**-Ryan Anderson**: Most upcoming projects are federal aid highway projects. The Road realignment project to deal with debris flow will occur from 2017-2021 for the whole project.

What is the legislative list of projects? State transportation improvement program (STIP) available online. STIP (2016-2019) showing 11 projects on Dalton. DOT has a 10 year plan with 19 projects on Dalton. The DOT plan is internal, but not proprietary. Have map with projects to hand out.

2015 will be a record construction year. Most projects are federal funds with state matching funds. There is \$1 billion in Federal and State matching funds for 2015 road construction Statewide. Mostly construction funds with little State-matching maintenance funding

Question: If bridgework, cost is high, but mineral materials is minimal. Is there a way to pull this cost out?

Good cost estimate is not available until final design. Have general estimates for National Environmental Policy Act (NEPA) analysis. Three years before project starts, enough data to decide if there is a need to ask for additional pits. Three year lead time is required for identifying additional material needs.

What is a major realignment of the Dalton Highway? Refer to it as modernizing, adjusting grade and curves to meet safety guidelines. These are not considered major realignments, they are considered minor realignments. Also DOT is focusing on reducing operation costs in the future and keeping traffic moving, such as raising grade of road near Deadhorse to prevent problems due to drifting snow and sagging. This will take a lot of material, highway centerline might move 10 feet for many, many miles.

Dalton 274-289 is currently only construction work on BLM-managed portion of the corridor.

MP 265 bridge replacement

MP 209-235 in the design phase, with actual project some years away from construction.

What are anticipated needs for repaving and maintenance? Will there be increased need for materials to maintain paved road vs. gravel?. Asphalt can be reycled. Asphalt has higher quality requirements, so availability of material sources is more important for paved vs gravel. Generally will use more aggregate to maintain gravel road vs. apaved road. Lose an inch per year on gravel roads. When roads are paved, DOT improves the road bed to reduce future maintenance.

Does DOT track amount of material used in construction vs. maintenance? DOT maintenance does track usage of the materials for accounting purposes. Need to talk to Maintainance and Operations (M&O). Not sure if they can use those numbers to project future needs. There are orders of magnitude more materials needed for construction vs maintenance.

DOT is large organization divided into many divisions, hard to know who at DOT to talk to.

DOT roughly estimates that 4-6 additional new material sites might be needed to support currently known projects over next decade.

Dillon(?) or Kevin discussion of future projects. Can share notes with Rob.

BLM used to have quarterly meetings with Office of Pipeline Management, then less frequently, but more participants from other agencies/users. Suggest these meetings be held again in the spring, to help avoid surprises and allow for discussion between all stakeholders.

DOT said it is useful to hear from the perspective of BLM what are we trying to do? This would help others know what info is needed?

BLM planning questions and management issues:

- Is there even enough mineral material in the corridor to meet future needs?
- How to balance gravel use with other uses, allow people to plan ahead rather than to react
- ID sensitive areas where BLM does not want pits, e.g., Sukakpak Mt area
- Need plan consistency for permitting
- BLM is hoping to do some zoning where it would not allow pits. Where should these areas be located?
- How to contrast pros/cons of having lengthy sections w/out pits
- Understanding what is normal or prudent by industry vs. what is discretionary.
- Focus on good projects vs profitability for individual contractors, especially for public works.
- BLM wants to participate in the STIP more.
- Standard stipulations are needed for material sites
- Information is needed for cumulative impact analysis and reasonable foreseeable future actions
- BLM needs to support existing authorizations like road and TAPs, so need to know how much materials is needed in the foreseeable future for maintenance
- BLM can consider right-of-way avoidance areas, which make a higher bar for permit approval, but does not totally preclude rights-of-way.
- BLM can live with estimates for 10 year period vs. annual
- Does DOT and APSC coordinate their needs so they are not each getting pits when one could be shared?
- BLM can use GIS analysis to inform past, present, and future uses
- Did the older projects gas pipeline that never came about do a RFD for gravel and is this data available? Never issued authorizations for material sites, applicants were never able to come in with a need. These have been vacated? They would need to do supplemental EIS for materials extraction.
- ASAP is doing a supplemental environmental impact statement that includes material sites locations and quantities.
- BLM and the State need to work together to determine navigability on rivers crossing the highway corridor, to clarify ownership of instream resources that may be available for mining.
- BLM would like to consider projects with secondary purpose, such as creating a float pond at Wiseman airport while getting materials.

<u>ADOT major issue</u>: the time it takes to authorize a BLM pit for State use, both the initial authorization (general) and the specific operator's authorization, seems onerous.

#### Pete Nagle Alyeska Pipeline Services (APSC) Lands Manager

- APSC did historic analysis going back to 2000 and came up with 30,000 cy as average use of materials over that 13 year period. Atigun and Galbraith (old site) were largest contributors.
- This estimate of 30,000 to 50,000 cy annually is for maintenance and emergency use.
- Biggest issue is maintaining diversity of access to pits; don't forecast asking for new sites.
- APSC has one pit about every 12 miles on average.
- On state lands, the sites are pre-designated, so no need to ask for new materials, only sign contract. No need to be advertised anymore. Each operator has a separate Mining and Reclamation Plan (MRP) for each site developed.
- Maybe BLM can designate sites in the RMP similar to what DNR does? Rob can discuss later. Typically BLM has done negotiated sale, but there are other options

#### Questions

Does APSC see changing conditions influencing future needs? Will get back to BLM on this later.

For Pre designated state pits is there a standing reclamation plan or does APSC do a plan? Any site with active contract as of 2001 had a broad brush designation of pits available to sell out of. If DNR creates a new site, it needs to be redesignated. Each contract has its own mining and reclamation plans.

What is the state doing to address the issue of noxious and invasive plants in their pits? Dept. of Agriculture has a weed-free certification program to certify pits as weed-free. DNR is starting to include invasive species monitoring in contracts.

BLM has been documenting spread of noxious and invasive plants to the north. It is trying to figure out how to get a handle on this problem both in RMP and on permits.

Issue – If there are invasive species in a pit could take several years to clean up an infested pit. If APSC is not allowed to use the pit until cleaned up, this would be huge impact on TAPs. APSC needs continued access to their existing pits.

BLM's weed strategy is to treat pits where it is still possible to eradicate or control invasive species. There are 11 such sites. BLM may try herbicide application on one pit which is far from water this year. This would be the first time BLM has applied for a pesticide application permit.

BLM would like ideas from everyone on how to control invasive species and best management practices.

Economist Magazine – An article titled Not Weeds published March 28, 2015 print edition about the British view of invasive plant species in Britain. Article Discusses: "do interloping plant species from other lands actually cause environmental damage by outcompeting the locals?"

Does APSC currently have best management practices (BMPs) in place for dealing with invasive species? There is some mention of it in Alyeska field identification guide to help BLM with inventory. Not sure if there are BMPs.

State of Alaska does have a list of prohibited noxious species by law developed by the. Dept. of Agriculture. It also has a list of species that are problematic, but not prohibited. Plant materials center has more information on these issues.

If APSC goes to a site to get materials and find it covered with bird vetch, what is the procedure to be followed? Not sure if they have guidelines in place or not.

BMPs are already available from lower 48 states.

The permitting process is so onerous that APSC has not been able to spray. APSC has hit a brick wall. They would like to consider herbicide use.

In Fairbanks, several agencies (Corp of Engineers, Alaska Railroad) use herbicides, but APSC has not been able to.

BLMs concern is how to communicate with subsistence users on use of herbicide. It is an emotional issue and the technical information hard to understand. BLM proposed limited use of herbicides on the Dalton Highway in the environmental assessment because it is controversial, but also wanted to analyze the potential impacts.BLM stipulations include cutting and mowing before seeding, weed pulls on strategic river crossings, washing equipment.

- One possible best management practice from lower 48is vehicle washing stations. So far BLM has said these are not manageable, but maybe it needs to be considered.
- All APSC sites are dual use with DOT except for 3.
- Does DOT have BMPs? Yes, vehicles are washed before coming on site; It has a BMP guide put together with cooperative extension for right-of-way maintenance. This is designed for use by other agencies. Process has been delayed somewhat.
- DOT has integrated plan for invasive species.
- Dept. of Environmental Conservation (DEC) recently changed regulations to allow for herbicide use.
- There is high public concern about herbicide use. Level of concern varies by region.
- Weed free gravel certification is more difficult because the material is owned by State and federal government. Cannot require use of certified materials immediately because would shut down pits and make material unavailable.
- Discussion of State web site listing Prohibited & Restricted Noxious Weeds <u>http://dnr.alaska.gov/ag/akpmc/invasives/pdf/noxious-weeds.pdf;</u> or
- <u>http://plants.alaska.gov/invasives/noxious-weeds.htm</u>

<u>APSC major issues:</u> Invasive species requirements affecting APSC's continued access to those existing sites in use

#### Cindie Little, Alaska Stand Alone Pipeline (ASAP)

- Still in pre engineering phase, but estimate a need of about 13.5 million cy north of Yukon River for initial construction of ASAP. This is based on 36 inch pipeline. If a decision is made for a larger pipeline, more material would be needed.
- Long-term maintenance needs would be similar to APCS (30-50,000 cy/yr)
- One difference from TAPS is that the gas line will be buried and is cold, not warm
- Nolan Heath suggested the gas line would probably need less than TAPs, as there are fewer access roads for ASAP
- Need access roads to get to the gas line for maintenance. Might find maintenance needs higher.
- Bedding and padding material for the pipe has to be fine sand (12" total, 6" above and below.

4.5' wide trench). Envision a 5' by 5' trench. Will fill in the ditch with the material pulled out. Access roads and pads do not need to last long, so won't need special materials. Will need riprap for certain areas.

- Camp pads and lay down yards. Require 4 inches of better quality material that will compact for surface. Included in 13.5 million cy
- No compressor stations are needed for 36" pipeline.
- There is a definite need for more gravel sources on the Dalton Highway to meet needs of ASAP, DOT, and TAPs.
- Does anyone know how much material is available from existing pits?
- APSC mine plans outline an area where cultural clearance is done and it has some estimate of reserves for this area, but not sure how this estimate was developed. It is not sure how good the estimates are. Usually these estimates are quality based. You cannot take the number at face value, it might estimate 100,000 cy, but only 70,000 cy are usable.
- When do we have enough exploration data? Come up with minimum standard plan for exploration?
- Are DOT and APSC amenable to co-location with ASAP? ASAP has had some discussion on this topic with DOT and APSC, but these sites are in use already and might not have room for another party.
- ASAP will need 4-6 camps and pipe storage yards combined (4 camps/pipe storage, 2 pipe storage only). Of course it is a money savings to reuse camp sites from others, so ASAP would like to do this when possible. The original EIS for ASAP assumed use of all existing camp sites so that is what was analyzed.
- Old construction camp sites could be reused. APSC pump station sites are too small and currently in use so probably would not be useable as co-location site.

#### Karen Ray, Alaska Liquified Natural Gas (AK LNG) –

- Likely there will only be one of the two pipelines built, not both
- AK LNG has no estimate of gravel quantities yet, but pipe is larger than ASAP so would need compressor stations. It is doing field work this summer. Resource reports draft 1 with FRQ.
   Final Resource reports draft 2 will be done next summer. It is afe to say that AK LNG will

need more material than ASAP because of the lager pipe size and the need for compressor stations.

#### Lunch 11:45 ~ 1:15

# Powerpoint Presentation: Rob Ellefson, BLM Gravel Summit – Management and future

#### management options

Questions or comments on this presentation:

-If request is in excess of 300,000BLM must process as a competitive sale. If only one bidder would it qualify as competitive? Good question. Need to follow up on answer.

-Is the 300,000 cy limit per site? No this is for the entire state.

-Is the State bonded? State is self-insured.

-What is the reclamation planand when is it required? Currently BLM does NEPA twice, once on the site location and secondon development of site. This creates more work load and is a difficult issue BLM wants to solve through RMP.

-One concern with competitive sale to operators is the possibility for price gouging.

# Jack Reakoff – Wiseman Community Member, perspective on Materials Sites and use in the Wiseman Area, and the corridor in general

- · Been in the area since before the pipeline was built
- Generally, site selections have been good
- Called for public meetings with users
- There seems to be ample number of sites available, expansion of the existing sites is much more preferred than opening up new sites
- Consider visual impacts
- Sites in the Wiseman Road area would seriously disrupt short summer tourist season and overall quality of life for residents
- Called for better exploration data to inform a more detailed site analysis

**Powerpoint Presentation: Tim Hammond, BLM** *Potential standard stipulations that could affect mineral materials management* 

#### Required RMP Decisions

Mineral Materials: "Identify the following consistent with the goals and objectives for the exploration, development, and disposal of mineral materials in concert with the protection of natural resources within the planning area.

1. Areas open or closed to mineral material disposal.

2. Any terms, conditions, or other special considerations needed to protect resource values while operating under the mineral materials regulations.

The potential stipulations listed below are some ideas that have been suggested for consideration. Issues for consideration:

- Inadequate information when analyzing material site authorizations
- Insufficient information about reclamation when analyzing site authorizations
- Hours of operation within specified distances of campgrounds
- Difficulties managing camps associated with gravel operations

Tuesday, March 31, 2015

- Material Site Distribution/Density
- Poor Exploration Reliability
- Site Closure
- Storage Sites
- Emergency Use
- Spread of Invasive plants
- Revegetation Success

**Closing** – a call for everyone possibly affected by BLMs planning decisions under the RMP to remain engaged and involved as we formulate our recommendations

|           |                                                                                                                                   | MINU                | JIES OF MEETING (MOM)                                                                                                                                                                                 |                                                                                                                       |  |

| 1                               |                                     |                    | In a conversation related to shore fishery leases, ADNR-ML&W said<br>that they have retrieved two lease files from their archives related to<br>the previous Pacific Alaska LNG project at Nikiski (circa 1970s).<br>These files are:<br>- ADL 61493<br>- ADL 61494<br>James Sowerwine at ADNR is the point of contact and retrieved these<br>files from archives to make available for Project review. James also<br>brought up ADL 57588 which relates to a highway easement that<br>overlaps part of the western pipeline corridor to the northwest of Cook<br>Inlet. James said that when he saw the pipeline corridor, he<br>wondered whether we knew about the highway easement.<br>Obtained electronic records from ADNR and filed in Aconex. David<br>Sinclair had follow-up discussion with James Sowerwine to discuss<br>information. |          |

| 1                                                             | NMFS Queries on Final IHA Application       |                                     | NMFS asked for two final clarifications on Project IHA Application. The clarifications relate to use of echo sounders as well as the down hole geophysics equipment. The Project confirmed that they would update the application for NMFS with available information.                                                                                                                                                                                                                                                                                                                                |                     |
| 2                                                             | ESA Consultation - Biological<br>Assessment |                                     | Sara Young recommended that the Project prepare a biological assessment to facilitate ESA consultation. Sara requested that a copy be provided to both NMFS offices - the local, Alaska office as well as to the Maryland office. Claire Joseph confirmed that the Project has prepared a biological assessment which is undergoing final reviews/ edits. Sara Young commented that the Project should plan to include Steller Sea Lions in the scope of the Biological Assessment. Greg Green confirmed that Steller Sea Lions and Humpback Whales were included in the draft Biological Assessment. |                     |
| 3                                                             | Schedule                                    |                                     | Sara Young asked about the Project's desired schedule / timing of<br>work. Claire Joseph responded that the Project would like to receive<br>authorization as soon as possible, but that we realize that July<br>timeframe is likely. Sara Young indicated that the ESA consultation<br>has the longest potential timeframe (180 days).                                                                                                                                                                                                                                                               |                     |
| 4                                                             | Calculation of Takes                        |                                     | Sara indicated that NMFS is revisiting how it calculates "takes" and<br>that the granted number of takes may be different than that which<br>was requested. Claire Joseph inquired whether NMFS required any<br>additional information as it reviewed the calculation of takes. Sara<br>indicated that no further information was required.                                                                                                                                                                                                                                                           |                     |

Shina clarified that upon receipt of official correspondence,<br>SHPO would provide a letter of "non-objection" to the proposed<br>methods for use with FERC consultation. Formal concurrence with a<br>finding of "No Historic Properties Affected" won't come until we repor<br>the results of our findings to SHPO and engage in Section 106<br>consultation         ACTION ITEMS:       ACTION ITEMS:                                                                                                                                                                                                                                                                                             | 3         | Time & Resources   |                   | and stated that overall, the OHA would prefer the Project to focus time and resources in other areas (i.e. terrestrial environments) that                                                                                                                                                                                                                                                                                                                                           |                                |  |  |
| 6       Analysis Area       Shina Duvall asked what was the Project area of analysis - whether i just included the gas pipeline corridor across Cook Inlet? Claire Joseph responded to Shina Duvall that the area of analysis included both the offshore segment of the gas pipeline corridor in Cook Inlet, and also the marine terminal. Shina Duvall mentioned that OHA is working on creating a GIS layer to be represented in the online AHRS portal which shows surveys in Alaska. OHA would incorporate Project survey areas if that information can be provided.         7       Path Forward       Group on call discussed action items and path forward: Alaska LNG sends correspondence with proposed methods to SHPO; SHPO responds with written agreement that the methods would be adequate. Shina clarified that upon receipt of official correspondence, SHPO would provide a letter of "non-objection" to the proposed methods for use with FERC consultation. Formal concurrence with a finding of "No Historic Properties Affected" won't come until we report the results of our findings to SHPO and engage in Section 106 consultation         ACTION ITEMS:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 4         | Radiocarbon Dating |                   | buried soils, or other indications of submerged landscapes, to attempt C14 (radiocarbon dating) analyses to date the landform. | 1         | Permitting Discussion | n with KPB          | Meeting Overview: Met with KPB administrators to align on permittin<br>strategy for 2015 G&G and other work within the KPB. Established<br>Jeff Raun as primary contact for regulatory permitting and other<br>interfaces except direct discussions on land acquisition. Developed<br>framework to consolidate KPB permitting actions for the various work<br>scopes under a single Land Use Permit. |          |  |  |

| 4           | <ul> <li>Project Overview</li> <li>FLM requested that AK LNG provide summary information regarding power generation capacities (in MW) of project components to better understand order of magnitude scale to the facilities.</li> <li>FERC commented that the Resource Report should include details on all planned project facilities including compressor stations, number of turbines, backup power to be installed, and how the turbines will be operated to clarify intent to install redundant compressors for maintenance and fail-over periods. Early project details were included in Draft 1 Resource Report 1, General Project Description. (Draft 2 will include more design detail.)</li> <li>Questions were raised regarding information still needed for analyzing marine vessel emissions. For instance, will LNG carriers use shore power when hoteling? What alternative fuels will be allowed when under way? Fleet makeup and operating conditions are of interest.</li> <li>FERC indicated that the agency maintains information on marine fleet makeup for other LNG projects that is available to supplement Alaska LNG project-specific information for an estimate of emissions. FERC includes marine emissions in its impact analysis out to the limit of state waters.</li> <li>FWS requested data/estimates about how many additional production wells are planned to be drilled at PTU. AKLNG referred to draft RR1 as the current source of project description information that will be updated in Draft 2.</li> <li>Current versions of RR1 and RR9 will be circulated to meeting attendees.</li> <li>BLM asked if slides from the FLM meeting will be distributed upon AKLNG approval. Slides were distributed on 4/24/15.</li> </ul> | Norm<br>Scott /<br>Jim<br>Pfeiffer | 46 min   |

#### Federal Land Managers Air Quality Meeting

| <u>ltem</u> | Agenda Item(s)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Leader                             | Duration |

| 5           | <ul> <li>Air Quality Permitting</li> <li>Air permitting will be under the authority of the Alaska Department of Environmental Conservation, which has a SIP-approved program.</li> <li>The GTP and LNG plant/marine terminal are expected to require PSD permits. The 8 compressor stations (CS) will require individual minor air quality construction permits. One of the two heater stations will be collocated with a compressor station and consolidated into the compressor station minor permit. The other heater station will likely require a separate minor AQ construction permit.</li> <li>Potential NO<sub>X</sub> emissions for each compressor station are on the order of 100 tpy.</li> <li>In addition to PSD and minor AQ permits, sources will be subject to all federal requirements, such as NSPS and NESHAPs, and NEPA analysis.</li> <li>Point Thomson AQ permitting is the responsibility of the PTU operator, but related facility impacts will be included in NEPA cumulative impacts analysis.</li> <li>Alaska LNG does not propose any Beaufort Sea marine facilities to export LNG directly from the North Slope.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Al<br>Trbovich                     | 7 min    |
| 6           | <ul> <li>NEPA – Alaska LNG Description</li> <li>Existing climate and meteorology was characterized in Draft 1 of Resource Report 9 using all publicly available long-term meteorological datasets in the project vicinity from the North Slope down through Cook Inlet to Kodiak. The length of the data records ranges from a few years to up to 80 years or more at some stations.</li> <li>Existing air quality in RR9 Draft 1 was characterized by the available, high quality AQ datasets in the project vicinity. These datasets have much shorter duration than the meteorological datasets – sometimes as little as one year of data. Several additional datasets have been identified since RR9 Draft 1 was prepared. These additional data will be screened for inclusion in Draft 2.</li> <li>AKLNG provided an overview of the AQ and meteorological data sources proposed for the air quality impact assessment.</li> <li>GTP and LNG Plant modeling will use AERMOD with site-specific met data.</li> <li>Compressor station modeling will use AERMOD in screening mode. If representative met data is needed for CS2 and CS4, then AERMOD modeling will use those data.</li> <li>AERMOD is limited to the area within 50 km of a stationary source. CALPUFF will be used for any modeling of impacts beyond 50 km.</li> <li>FERC expressed a concern about collecting a valid year of meteorological data within the time frame for the RR submissions. If a timely, valid year is not available, other existing data sources may be used to support modeling. For instance, at the GTP, AQ and met data from A Pad or CCP could be proposed as an alternative.</li> </ul> | Norm<br>Scott/<br>Brian<br>Hoefler | 98 min   |

#### Federal Land Managers Air Quality Meeting

| <u>Item</u> | Agenda Item(s)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Leader                              | Duration |

#### Federal Land Managers Air Quality Meeting

| <u>ltem</u> | Agenda Item(s)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Leader           | Duration |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------|
| 7           | <ul> <li>Air Quality Related Values</li> <li>FLAG specifies three types of analyses for AQRV – visibility, O<sub>3</sub>, and deposition.</li> <li>If initial analyses demonstrate that AQRV impacts are below thresholds provided in FLAG, impacts are not adverse and no further analysis is required. If impacts are above the thresholds, a more refined analysis may be required on a case-by-case basis in consultation with the FLM.</li> <li>FLMs believe the Q/D screening method in FLAG applies to PSD permitting actions, but not to NEPA. A Q/D screening limit was never agreed upon by FLMs for minor stationary sources so it does not apply.</li> <li>VISCREEN should be used for initial visibility screening.</li> <li>On the North Slope, a 3 year (2006-08) CALPUFF-ready dataset approved by EPA Region 10 is available from NPS/FWS to support GTP analysis (Arctic National Wildlife Refuge, Gates of the Arctic National Park).</li> <li>In Cook Inlet, a 3 year (possibly 2001-03) MM5 dataset is available to support CALPUFF modeling of the LNG Plant. This dataset was used for previous BART (best available retrofit technology) modeling analyses of Cook Inlet.</li> <li>Source and availability of MM5 dataset for Healy Clean Coal BART analysis is unknown. <u>Subsequent detail from ADEC:</u> Golden Valley Electric used a one-year (2002), 15-km grid MM5 dataset processed using CALMET version 6.211 by the Western Regional Air Partnership (WARP).</li> </ul> | Brian<br>Hoefler | 21 min   |
| 8           | <ul> <li>Other Discussion</li> <li>FERC clarified that greenhouse gases (GHG) emissions quantification is addressed<br/>in the NEPA Air Quality section. However, climate change impacts are addressed in<br/>the cumulative section.</li> <li>Applicants typically provide GHG emissions estimates and climate change analyses<br/>in RR9.</li> <li>Quantification of GHG emissions is required for every stage of the project, including<br/>construction, operations, and shipping.</li> <li>GHG emission estimates should not include product combustion emissions from the<br/>exported LNG. FERC presumes LNG from jurisdictional projects is a commodity that<br/>would be replaced by another LNG source and accordingly should not be considered<br/>in the cumulative effects assessment.</li> <li>An FLM meeting to discuss noise issues will be scheduled after sufficient facility<br/>details, noise surveys, and modelling results are available.</li> <li>A general conformity analysis, if applicable, will be conducted by FERC for the<br/>Fairbanks nonattainment area. Need to confirm if there is any construction activity,<br/>including pipe laydown areas, camps, etc. in the nonattainment area.</li> <li>It was noted that the US Forest Service did not attend the conference call.</li> </ul>                                                                                                                                                                                | Brian<br>Hoefler | 10 min   |

# Alaska LNG

#### MINUTES OF MEETING (MOM)

| Project N                           | lame:                                             | PHMSA Technical I | Engagement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

AGENDA ITEMS:

| Item | Agenda Item              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Overview                 | After an emergency briefing provided by USCG, the group discussed<br>as a safety moment the importance of wearing a life jacket when<br>boating. This topic was raised due to a recent incident of a boating<br>accident and drowning near Homer/Seldovia. The group reviewed<br>slides prepared by AcuTech which covered safety and security<br>considerations which would be assessed during the Follow-On<br>Waterway Suitability Assessment (WSA) workshop. |
| 2    | SWAPA pilots             | USCG asked if there are there are enough SWAPA Pilots to<br>accommodate future Alaska LNG Project LNGC traffic? Project<br>confirmed that additional SWAPA pilots would be required. It takes 5-7<br>years to train a pilot and ensure that he/she has adequate<br>experience. Since the operational phase of this Project is approx. 10<br>years in the future, there is time to train pilots.                                                                 |
| 3    | Customs Clearance        | USCG asked if the Project had a strategy regarding customs clearance. The group discussed whether vessels could be cleared on the North Slope rather than Adak or Unalaska, and how to arrange for efficient customs clearance at Homer / Cook Inlet. The group discussed that this would not be worked in the WSA but would be an important subject going forward.                                                                                             |
| 4    | LNGC anchorages          | USCG asked whether LNGC anchorages had been considered or<br>identified yet. Alaska LNG Project representatives confirmed that<br>anchorages are being considered in Kachemak Bay. Three locations<br>have been identified and their selection was based on wind directions,<br>wave patterns, various other parameters for safety. The group will<br>identify those three anchorages during the WSA workshop.                                                  |
| 5    | USCG Response and Assets | The USCG explained (at a high level) how decisions would be made to deploy personnel and assets for safety or security situations. The group discussed various scenarios that might be applicable to WSA. USCG has 2-3 cutters available year-round for response in the Project area (but those cutters may be in various regions of the State and                                                                                                              |

| Item | Agenda Item                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      |                                                    | therefore will not be on immediate standby for Project response). The cutters would soon be replaced with vessels of same capability. Smaller USCG boats are seasonal (Memorial Day to Labor Day).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 6    | Security Scenarios                                 | USCG explained that the potential significance of security scenarios<br>are considered based on three main factors: capability, intent, and<br>geography. The geography in Alaska makes many of the security<br>scenarios have a very low probability of occurence. Additionally, LNGC<br>size and speed of transit make it a difficult target for security<br>incidents. The group noted that the 'small town' atmosphere in Homer<br>and more broadly, in Cook Inlet, would mean that a stolen boat/<br>vessel would be quickly reported, and that any suspicious activity (i.e.<br>loading explosives into a boat) would likely be reported to authorities.<br>Group discussed that security risk of underwater attack is of<br>negligible concern given the cold temperature, high turbidity, and<br>strong currents and tides in Cook Inlet. Aerial attack is also of little<br>concern in this particular geographic region. |
| 7    | WSA Implementation - duplication of risk scenarios | The group noted that many of the safety and security considerations<br>of the LNGC transit route inbound and outbound are similar and<br>therefore it would be likely during the WSA workshop that discussion<br>on certain segments could be concluded quickly if there were not<br>major differences in risk factors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 8    | Relevant Plans                                     | USCG mentioned several groups and plans which are relevant to<br>vessel safety and security and which include:<br>- Alaska Partnership for Infrastructure Protection<br>- Area Maritime Security Committee<br>- Underwater Terrorism Prevention Plan<br>- Cook Inlet Harbor Safety Committee (currently being formed)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 9    | Safety Scenarios                                   | Group considered whether an emergency at a drilling rig or oil/gas<br>production platform in Cook Inlet would affect LNGC routing which<br>could cause any further safety or security concerns. Also considered<br>whether Trans Foreland pipeline construction could affect LNGC transit<br>or the WSA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 10   | Notice of Arrival                                  | Group discussed notice of arrival (NOA) process, including the<br>different actions that are taken by USCG and other federal agencies<br>(Customs, Immigration, Agriculture) to prepare for a vessel arriving to<br>a U.S. Port. In addition to the standard procedures, high interest<br>vessels are tracked by Pacific Area Maritime Intelligence Fusion Center<br>(MIFC) located in Alameda, CA. (http://www.military.com/HomePage/<br>UnitPageFullText/1,13476,723887,00.html). Vessels are put on a '<br>heightened awareness' list if the vessel had recent ports of call in<br>specific locations globally and if the vessel is of high interest, the<br>USCG will board the vessel at sea.                                                                                                                                                                                                                                 |
| 11   | Shelikof Strait                                    | USCG is considering restricting use of Shelikof Strait for transit of certain types of vessels (i.e. tank vessels). Shelikof Strait is an area of concern for the USCG due to the challenges of safe navigation related to tides, weather, its remoteness, and the lack of oil spill response capability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|      |                                                    | Group decided to retain the Shelikof Strait LNGC transit route<br>segment in the WSA risk assessment to be evaluated. Restriction of<br>certain vessel movement through that area would take time to put in<br>place (i.e. requiring regulations) and would need to be considered in<br>the annual updates to the Alaska LNG WSA in the future.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12   | Stakeholder Comments for WSA                       | MST1 Davis will provide to Project the comments received by USCG from technical assessment group and stakeholder representative group members so that Project can incorporate those comments into the WSA workshop.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 13   | Updated AIS/Vessel Call Data                       | Tim Robertson to provide 2014 vessel calls for critical ports to be used as data set for WSA workshop and WSA report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Item | Agenda Item                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14   | Area Maritime Security Plan                       | <ul> <li>Project requested access to Area Maritime Security Plan to incorporate assumptions into WSA workshop. John Farthing to provide hard copy and/or digital version to Steve Calabrese. John Farthing also mentioned other useful reference documents:</li> <li>Cook Inlet Marine Firefighting Plan</li> <li>Cook Inlet Risk Assessment has information (maps) about VHF Coverage in Cook Inlet</li> </ul>                                                                                                                                                                                                                                                                                   |
| 15   | Pilot Boarding West of Homer Spit                 | John Taylor will provide to the group a copy of the letter of understanding that states circumstances under which SWAPA will and will not board vessels east of 60 foot rock                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16   | Communications in Cook Inlet                      | Group discussed potential communication gaps or limitations along the LNGC transit route (not vessel to vessel communications, but rather USCG to vessel communications). VHF, UHF, GMDSS, Satellite phones, and cell phones should be considered/ evaluated.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 17   | Non-LNGC vessel transit through maneuvering basin | Group discussed that certain vessels transiting to/from the Port of<br>Anchorage transit very close to the proposed Alaska LNG Project<br>terminal (in the area that the Project refers to as "the maneuvering<br>basin"). This was seen from AIS data that the Project studied in<br>preparing for the WSA. The group noted that this vessel traffic should<br>be considered with respect to allowed activities in/near the safety or<br>security zones for Project LNGCs.                                                                                                                                                                                                                       |
| 18   | Safety and Security Zones                         | <ul> <li>Group discussed safety and security zones, including:</li> <li>Regulatory process for establishing these zones</li> <li>USCG resources needed to enforce zones</li> <li>Exceptions/allowances that can be made for other commercial/<br/>recreational activities in the area if deemed appropriate</li> <li>Nature of these zones that they are site-specific (not mandated<br/>nationally)</li> <li>Other means by which the Project works with USCG on topics of<br/>safety and security (including Facility Security Plan (FSP)).</li> <li>It is important for Project to be aware of the current regulations for<br/>security zones in Cook Inlet (reference 33 CFR 165).</li> </ul> |

Alaska LNG.

|                  | MEETING DETAILS                                                                                             |             |            |  |  |

|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-----------------|
| 1           | <ul> <li>Project Overview</li> <li>General overview of the project provided to James Renovatio, who has had little exposure to the Alaska LNG Project</li> <li>Overview focused on the compressor stations including the preliminary pipeline corridor, preliminary compressor station locations, and major equipment in each of the proposed stations</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Bart<br>Leininger | 15 min          |
| 2           | <ul> <li>Compressor and Heater Station Emissions and Permitting</li> <li>Emissions calculation results summarized for ADEC staff. Current calculations show that all sources are minor and not subject to PSD permitting. ADEC staff advised that the emissions calculations were preliminary.</li> <li>Alan Schuler (ADEC) concurred that the compressor station sources would be subject to minor source permitting. Site 2 would be subject to minor source permitting for NOx, PM-2.5, and PM-10; all other stations would be subject to ADEC minor source permitting.</li> <li>Alan Schuler (ADEC) indicated that a modeling demonstration would be required for all sources subject to minor source permitting. Modeling would be required for NOx (annual) and PM-2.5 (24-hour) for all compressor stations. For Site 2, modeling would also include PM-10 (24-hour).</li> </ul> | Bart<br>Leininger | 15 min          |

#### Meeting with ADEC Regarding Midstream Air Quality Impact Modeling

| <u>ltem</u> | Agenda Item(s)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <u>Leader</u>                           | <b>Duration</b> |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|-----------------|
| 3           | <ul> <li>Modeling</li> <li>The modeling results were presented to ADEC staff along with the methodology used.</li> <li>ADEC comments were as follows: <ul> <li>ADEC agreed that running AERMOD with screening meteorological data would be an acceptable approach.</li> <li>Screening meteorological data sets should be generated using every degree of wind direction rather than every 10 degrees of wind direction, as currently used in the model.</li> <li>ADEC indicated that scaling factors (to convert hourly results into other averaging periods) can be used if the maximum impact from <u>each</u> emission source is summed at each receptor.</li> <li>Alternatively, ADEC indicated that it would be acceptable to use the maximum one-hour average without scaling to demonstrate compliance with longer term ambient air quality standards (e.g., PM-2.5 (24-hour)).</li> <li>ADEC indicated that if Alaska LNG abandons the use of screening meteorological data for modeling, using actual meteorological data from Pump Station No. 3 would not be appropriate for Compressor Station Site 2.</li> </ul> </li> <li>Regarding background concentration data, ADEC indicated that no background is required if the modeled result is below the thresholds stated in 18 AAC 50.542(c)(2) (e.g., PM-2.5 modeled result is less than 50% of the standard).</li> <li>While not required, ADEC recommended that a modeling protocol be submitted for review and approval.</li> </ul> | Bart<br>Leininger<br>and Mark<br>Gruber | 30 min          |

| 1    | ADOT&PF (Jennifer W.) strongly recommended Alaska LNG Project team meet with Kenai<br>Peninsula Borough in advance of May 27th preliminary findings review. Alaska LNG Project team met<br>with KPB in advance of 27 May workshop.                                                                                                                                                                                                                                                                          |        |  |  |  |
| 2    | ADOT&PF (Jennifer W.) recommended engaging the public when appropriate with a preferred recommendation and show alternatives that were not selected along with how the alternatives were evaluated.                                                                                                                                                                                                                                                                                                         |        |  |  |  |
| 3    | ADOT&PF (Jennifer W.) requested the project team consider Maintenance and Operations differences between existing and future conditions; ADOT&PF indicated maintenance would be negotiated with the Borough for remaining portions of the existing KSH alignment.                                                                                                                                                                                                                                           |        |  |  |  |
| 4    | ADOT&PF (Ken M.) indicated a preference for limiting access points along the new KSH alignment.                                                                                                                                                                                                                                                                                                                                                                                                             |        |  |  |  |
| 5    | ADOT&PF (Ken M.) indicated that a multi-use path would bring goodwill with the community;<br>ADOT&PF would look to the Borough to maintain a multi-use path if one is constructed.                                                                                                                                                                                                                                                                                                                          |        |  |  |  |
| 6    | ADOT&PF (Ken M.) indicated that ADOT&PF would need to work towards a MOU with the Federal Highways Administration (FHWA) for acceptance and transfer protocols. And, ADOT&PF confirmed a need to document informal conversations and formalize them with FHWA regarding ROW acquisition.                                                                                                                                                                                                                    |        |  |  |  |
| 7    | ADOT&PF (Jennifer W.) would not want to preclude future expansion into a four-lane highway and recommended the project team engage the KPB about potential future development in North Kenai.                                                                                                                                                                                                                                                                                                               |        |  |  |  |
| 8    | ADOT&PF (Ken M.) indicated it is not looking for a 300' ROW corridor. Jennifer W. commented that the TIA would provide the design basis information, likely leading to a two-lane highway. Ken indicated that 200' of ROW for a non-Miller Loop alignment would likely be sufficient and that a 100-fot ROW could be acceptable for alternatives including Miller Loop Road. ADOT&PF requested that the project carefully evaluate human environment effects of using existing ROW for a new KSH alignment. |        |  |  |  |

Alaska LNG.

| 1    | Slide Review                                  | Group reviewed the draft slides to be used for the upcoming WSA risk assessment workshop (May 12-14). The group noted updates to slides and reviewed the order of speakers as well as the agenda. USCG planned to add additional information regarding safety and security zones, and discussed adding examples from other Ports. Group discussed how the safety and security zones are risk-based with local factors influencing mitigation and management strategies (therefore there are not "best practices" but rather measures to address site-specific concerns). |  |  |  |  |  |
| 2    | Comment Period                                | Group discussed near-term schedule (after WSA workshop). USCG is planning for 90 day rather than 30 day public comment period, and plans to begin comment period soon after the WSA workshop is completed so that comments received from public can be incorporated into the WSA Report as it is developed by AcuTech and as thee USCG prepares the Letter of Recommendation to FERC.                                                                                                                                                                                    |  |  |  |  |  |
| 3    | Scenario - Anchor Snagging<br>Subsea Pipeline | USCG asked whether group had considered scenario (in preparation for WSA) which included LNG Carrier dropping anchor and snagging a subsea cable or pipeline, rupturing the pipeline.                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |  |  |

| 3    | Upcoming June multi agency workshops on pipeline construction and waterbody construction were highlighted as follow-on workshops to the pipeline routing workshop and attendance was encouraged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Jack Everts-coordinated with Julio Daneri & PMT  | Completed<br>June 24 & 25 |
| 4    | An overview of route development was provided including Pt Thomson<br>and the mainline, inclusive of the offshore portion across Cook Inlet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | No Action                                        | Completed                 |
| 5    | The general routing criteria for onshore and offshore (including shore crossings) pipelines was reviewed and the current summary of crossings was provided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | No Action                                        | Completed                 |
| 6    | The pipeline team then commenced a detailed milepost by milepost<br>review of the entire route starting from the Pt Thomson Plant and<br>finishing at the LNG facility. The on-line GIS web mapper system was<br>used for the entire route review. The agencies all have read-only access<br>to the AK LNG system and had been encouraged, prior to the workshop,<br>to be familiar with the available on line data so that maximum use could<br>be made of the day.                                                                                                                                                                                                                                                                                                                                                                                                                          | No Action                                        | Completed                 |
| 7    | Complementing web mapper was a second projection system that<br>showed photographs or other detailed information of concurrent areas<br>along the pipeline route for additional information and to promote further<br>discussion. The web mapper system was driven by a technician<br>specialized on that system, leaving the pipeline experts able to fully<br>focus on route review information and addressing agency questions.                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Ruben Medrano - Rev. B<br>uploaded to Web Mapper | Completed<br>June 15      |
| 8    | Each mile of the route was reviewed. Some areas such as Glitter Gulch prompted more discussion than others given the particular terrain characteristics of that area. ASAP & AK LNG meeting in the field to review route on June 29.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | No Action                                        | Completed                 |
| 9    | Questions and answers were exchanged throughout the meeting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | No Action                                        | Completed                 |
| 10   | Productive debris flow and sediment discussion with DGGS will result in follow up meetings.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                  |                           |

## **USFWS Meeting Discussion**

| 9  | Caryn discussed non-jurisdictional activities such as the Kenai Spur<br>Highway relocation (ADOT&PF) and Point Thomson expansion –<br>there are discussions underway to include these activities in the<br>Alaska LNG EIS instead of producing separate NEPA documents. It<br>was noted that the current decision for the pipeline from Point<br>Thomson to the PBU is to be above ground.                                                                                                                                                                                                                                                                                                                   | L. Noel/J. Schmidt | 10/5/15                        |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------------------|
| 10 | Point Thomson issues – USFWS has concerns about the expansion<br>of Central Pad with respect to storage locations that could block polar<br>bear eastward movement. Their preference is to expand this pad<br>south, away from the coast. Currently Point Thomson has installed<br>cameras to monitor bears moving along coast but they have not heard<br>anything about whether bears were sited or how the system ultimately<br>worked. USFWS recommended that the Project coordinate with Point<br>Thomson about their concerns regarding pad expansion.                                                                                                                                                  | C. Rea             | NA                             |
| 11 | Caryn asked about potential issues with towers/flares with respect to migratory birds. Shannon suggested that one mitigation measure could be to locate towers next to other structures. Ted – consider primarily westward fall migration movements (birds) and potential for collisions. If there are guy wires they would like to see diverters installed. For flares they prefer a vertical flare over horizontal. Ted did not think a pilot light on a flare was a significant concern. Suggested that any height restrictions be dictated by FAA. They have seen bird collisions with towers at heights less than 150 feet. Jewel recommended that lighting be designed to be downward facing/shielded. | NA                 | NA                             |
| 12 | Avian Protection Plan –Caryn indicated that Alaska LNG would be<br>preparing a plan and would send to USFWS for review; requested<br>guidance/recommendations from USFWS on vegetation clearing,<br>towers, lighting, other potential issues – any overhead transmission<br>lines.                                                                                                                                                                                                                                                                                                                                                                                                                           | C. Rea             | Late<br>summer/early<br>fall   |
| 13 | Avian Protection Plan – USFWS to provide guidance and recommendations on vegetation clearing, towers, lighting, other potential issues – any overhead transmission lines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | J. Bennett         | June                           |
| 14 | Migratory Bird Treaty Act – Incidental Take Regulations; discussed that process may be fast-tracked and could ultimately be in effect by the time the Project goes through the EIS process; habitat based take estimates may initially be difficult to determine.                                                                                                                                                                                                                                                                                                                                                                                                                                            | L. Noel/J. Schmidt | Monitor                        |
| 15 | USFWS requested information on sequencing of activities, that is<br>when in the process would their BO be required; better definition of<br>the action area, timeline for consultation, and coordination with other<br>agencies. USFWS indicated they would defer to FERC's<br>determination of the action area for their assessment.                                                                                                                                                                                                                                                                                                                                                                        | C. Rea             | Late<br>spring/early<br>summer |
| 16 | Lynn asked about information on other potentially upcoming listing activities – little brown bat (unsure), bog lemming (maybe), wood frog (not likely)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | L. Noel/J. Schmidt | Late<br>spring/early<br>summer |
| 17 | USFWS noted that the section on wood bison should be moved to the "Considered But Eliminated" section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | L. Noel/J. Schmidt | Late<br>spring/early<br>summer |

## **USFWS Meeting Discussion**

| 18 | Jewel/Shannon discussed that the spectacled eider evaluation would<br>need to address footprint and nesting habitat lost, altered; normally<br>USFWS would look at the type and amount of habitat – not just<br>wetland classes; would need to look at alteration from buried line,<br>ongoing impacts to hydrology, thermokarst that cause changes to<br>migratory bird nesting habitat; suggested adaptive management for<br>buried line and monitoring post construction. | L. Noel/J. Schmidt | Late<br>spring/early<br>summer |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------------------|
| 19 | Shannon requested an annotated outline for the BA, especially for the sections about impacts that would be evaluated.                                                                                                                                                                                                                                                                                                                                                        | L. | 1                                  | Introductions, Purp              | Jose              | Senator Murkowski introduced the roundtable discussion and<br>introduced the speakers on stage. Specific topics she covered included<br>American energy policy (in particular an energy bill she is working to<br>progress), US Arctic issues and strategies, and the Alaska Affordable<br>Energy Strategy. She introduced the Alaska LNG Project and the<br>importance of the Project not only for the State but also for the<br>nation.                                                                                                                                                                                                                      |  |  |
| 2                                  | 2 Department of Energy           |                   | Deputy Secretary Elizabeth Sherwood-Randall provided an<br>introduction to the Department of Energy and their role in assessing<br>energy supply and demand and contributing to energy science and<br>technology development through 17 national laboratories. She<br>described the importance of the Arctic to the United States and<br>committee(s) that are being put in place to guide progress on arctic<br>issues.                                                                                                                                                                                                                                       |  |  |
|                                    |                                  |                   | She then announced that the DOE had completed its review of the<br>Alaska LNG Project's application to export LNG to non-free trade<br>agreement (non-FTA) countries, and that she was pleased to<br>announce the DOE's conditional approval of Alaska LNG export of LNG<br>up to 2.55 BCF/day for 30 years to Non Free Trade Agreement<br>countries. She described that the DOE considered Alaska LNG Project's<br>application to be different than the numerous applications currently<br>pending from the Lower 48 states, and that the DOE was committed<br>to an efficient review in order to provide certainty and confidence to<br>investment partners. |  |  |
|                                    |                                  |                   | Dr. Paula Gantt from DOE then described the process of evaluting the<br>Project's DOE export license in greater detail, describing the analysis<br>that was completed in order to ensure that the project is in the best<br>interest of the US. Dr. Gantt emphasized the importance of the Alaska<br>LNG Project in terms of commercializing an otherwise stranded<br>resource, revitalizing the economy, supporting trading partners, and<br>enhancing national security.                                                                                                                                                                                     |  |  |
| 3                                  | Federal Energy Reg<br>Commission | gulatory          | Ann Mullins, representing the FERC, explained the role of FERC in permitting the Alaska LNG Project. [See attached presentation presented by Ms. Mullins] She described the three-part FERC Pre-File process, which includes: company sponsored outreach, FERC-sponsored outreach, and draft resource reports. Ms. Mullins described that there are currently 7 LNG applications under review with FERC and 13 applications in the FERC Pre-File process (one of which is Alaska LNG's). Ms. Mullins highlighted the timeline of Alaska LNG                                                                                                                    |  |  |

|      |                                    | Project Pre-File milestones (consistent with those used by the Project) and also explained the role of FERC in coordinating other cooperating agencies in the NEPA review.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 4    | Department of Interior             | Tommy Beaudreau described the role of the Federal Interagency<br>Working Group for Permitting of Alaska Projects (established in 2011)<br>which organized at highest level in Wash DC in late 2014. He<br>emphasized coordination and cooperation among federal agencies<br>required for efficient federal review, particularly given that the Alaska<br>LNG Project will require more than twenty types of permits/approvals<br>at federal level. Mr. Beaudreau also emphasized that the federal<br>government recognizes the importance to be coordinated and<br>responsive in engagements with Native communities. |
| 5    | Questions                          | Senator Murkowski and audience members then posed questions to<br>the panel of speakers. One question from the audience asked what<br>State revenue the Project would bring (to which the panel speakers<br>said they could not quote exact figures). There was general discussion<br>on the importance of interagency coordination and cooperation<br>because of the complex nature of the permitting process.                                                                                                                                                                                                       |

| 2           | Project Overview<br>Scott Gillis presented an overview of AKLNG Project and a<br>technical overview of the GPT and LNG/Marine sub-projects.<br>Jonathan Curniski presented a technical overview of the Pipeline<br>sub-project. Adrienne Rosecrans and Ruben Medrano presented<br>an overview of the NEPA / Regulatory process.<br>Aspects of design that were discussed included: applicable codes<br>and standards being used for design, Fire Service Guidance for<br>Participating in LNG Terminal Evaluation, Siting and Operations<br>(2007), and Early Loss Prevention Philosophies for each sub-<br>project. And aspects of the NEPA / regulatory process included an<br>overview of the different federal, state and local agencies involved<br>in the AKLNG Project. | n/a                            | n/a      |
|             | It was clarified the LNG carriers were not part of the AKLNG<br>Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                |          |
|             | <b>Design Codes</b><br>Scott Gillis explained that the Project is currently being designed<br>according to both FERC requirements listed in the CFRs, in<br>compliance with the Alaska Administrative Code (AAC), and<br>additional lead party design codes and standards. The CFR and<br>AAC required codes and standards may create discrepancies<br>regarding which year version of the code applies. The SFMO was<br>agreeable to working through those "pinch points" through the<br>Alternate Means and Methods process (exceptions).                                                                                                                                                                                                                                    |                                |          |
| 3           | The SFMO representatives explained that the IBC 2009 is the currently approved version. The SFMO is working on adopting IBC 2012 and eventually IBC 2015. It was stated the use of the 2012 IBC version for the AKLNG project would be acceptable . The AKLNG proposed version of the IBC can be officially documented so there are no issues when a version of the IBC is adopted by the State.                                                                                                                                                                                                                                                                                                                                                                               | n/a                            | n/a      |
|             | The SFMO clarified that they do not issue a 'Certificate of Occupancy'. The SFMO issues a 'Certificate of Approval' for process and non-process type buildings. And the definition of a building is any structure with four (4) walls and a roof. All structures will require a "Plan Review".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                |          |
|             | The SFMO informed they coordinate with the local Fire Chief to<br>ensure the design and emergency response plans are in alignment<br>with the fire department expectations and approval requirements<br>before the SFMO approves our plans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                |          |
|             | The SFMO indicated that appointment of a new State Fire Marshal<br>(position is currently vacant) might assist in helping provide<br>guidance with respect to codes that should be used. The new<br>State Fire Marshal will have the authority to make decisions and<br>document them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                |          |

# MINUTES OF MEETING

# Intro meeting with State Fire Marshal's Office on Alaska LNG Project

| <u>ltem</u> | Action Items/Topics                                                                                                                                                                                                                                                                                                                                                          | Action Item(s)<br>Assigned To:                    | Due Date  |  |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|-----------|--|
|             | <b>Inspections</b><br>Diana Parks explained that construction phase inspections are<br>handled by her group for buildings over \$5M. The inspections are<br>typically performed at 60% & 90% completion.                                                                                                                                                                     |                                                   |           |  |
| 4           | John Canthon is the POC for operations and inspections and sits<br>with the State Pipeline Coordinator's Office (SPCO). He<br>commented that they believe the LNG plant may not be applicable<br>to the Fire Marshal (FM) inspection because FERC will perform the<br>same inspection each year. GTP and Pipeline facilities will be<br>applicable to annual FM inspections. | n/a                                               | n/a       |  |
| 5           | <b>Emergency Response</b><br>The SFMO explained that the local fire departments must be<br>involved in the emergency response planning. The SFMO will be<br>checking to make sure the local departments review and approve<br>the emergency response plans.                                                                                                                  | A. Rosecrans                                      | 6/30/2015 |  |
|             | <u>Action:</u> Talk with Phil Suter regarding recommended timing to<br>engage with the local fire departments to start discussing<br>emergency response planning.                                                                                                                                                                                                            |                                                   |           |  |
| 6           | <b>Next Steps</b><br>The SFMO recommends a project review with the new State Fire<br>Marshal, once he/she is nominated. From a technical standpoint,<br>the AKLNG team can start engaging with Diana Parks regarding<br>design code and discrepancy concerns.                                                                                                                | Luci Machado<br>Scott Gillis<br>Jonathan Curniski | TBD       |  |
|             | <u>Action:</u> Loss Prevention Engineers for each sub-project team to develop a preliminary list of potential discrepancies between codes and standards, as well as potential issues related to compliance with code requirements.                                                                                                                                           | Francisco Santos                                  |           |  |

| ltem | Agenda Item(s)                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |  |
| 1    | Objective                                 | To continue the technical engagement with PHMSA by discussing: Confidentiality of Project<br>Information, Independent Third Party reviewers, Alaska LNG project comments to SBD SP<br>Conditions related to Operations, Maintenance and Integrity (12, 14, 16-23), and updates on work<br>programs, to include strain-based design assessment with anomalies, and spacing studies for crack<br>arrestors and main line block valves.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |  |
| 2    | Confidential Business Information         | SP's Conditions are not CBI and should be treated as an engineering standard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |
| 3    | Project Schedule and SP Filing<br>Process | PHMSA working to standardize SBD SP conditions to a point where 90% of conditions would apply to all current projects pursuing a SBD SP (Donlin Gold, ASAP and Alaska LNG project). Donlin would like the project to review conditions 6,7, and 17 which are probably key conditions, and discuss with the project before going to draft EIS. PHMSA would like to see the SBD SP Conditions in the DEIS EIS Section/Special Permit Application describing SBD Special Permit Conditions mitigate potential risk, +How SBD different about proposal and leads to increase risk, • How conditions mitigate potential risk, +How SBD differs from operating under code, • Explain not just what SBD is, but "why" this Pipeline differs from other pipelines, • How is SBD different than ASD; how might risk be increased, and mitigated by Conditions, •Written in plain language for generally educated public; use specific statements, avoid generic statements, •Increased risk accounted for in these ways; increased inspections, protection, design, •Communicate implications of release understood; Understand if there is a release, what is at stake, and •"We are taking this seriously" message to public PHMSA: Wrt timing, after FERC Order, PHMSA has a 30 day notice then 90 to 120 days to process.PHMSA issuance of permit contingent upon issuance of Record of Decision (ROD). Project schedule should account for 4 – 6 months after ROD to accommodate "30 day notice" period for PHMSA to complete process. There was some discussion with the conclusion that PHMSA is unsure about when SP can be issued wrt FERC and the NEPA process. Follow-up required. SP Application time is about 4 to 6 months. PHMSA: Wrt One vs. multiple SP's a "hybrid" approach could work due to complexity of the SBD SP and might lose some of the other Conditions for the other technical areas. SBD is more complicated to explain. Need to make sure PHMSA can answer public's questions. Grouping 3LPE and SBD may be an option as this is what you procure at the same time. For depth of cover, want to make s |  |  |  |  |

| 4 | ITPR                                                                                     | Options discused                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 5 | SBD SP Conditions related to<br>Operations, Maintenance and<br>Integrity (12, 14, 16-23) | Reviewed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 6 | Main Line Block Valve Spacing<br>Evaluation & Crack Arrestor<br>Spacing                  | PHMSA definitely wants valve accessibility. PHMSA in the spotlight for leak detection, ability to isolate a section and shut it down. PHMSA has a draft rule on remote controlled valves. Any increase in spacing of a valve, would need to consider leak detection, and ability to shut system down. Look at NTSB recommendations from San Bruno (NTSB P-11-009 to NTSB P-11-020, with P-11-011 for ASVs and RSUs, and P-11-010 for leak detection). PHMSA preparing a notice of probable rule making based on NTSB recommendations. Alaska LNG project will have to incorporate these NOPR recommendations into MLBV SPA. PHMSA probably wouldn't consider increased spacing south of Coldfoot – concerns with future development. Fire impacts would be greater, south of Coldfoot. Alternate spacing between Adigan Pass and Coldfoot – maybe. Look at PIR and see how much this would impact. PHMSA also advised of concerns South of Coldfoot. P&ID of MLBV spacing would be good to see and if it exceeds 20 mile spacing, review for accessibility. Anything greater than 30 miles causes PHMSA concern. PHMSA flexible on crack arrestor spacing. |
| 7 | SBD SP segment lengths                                                                   | Modification of SBD SP segment lengths after SPA submission, prior to Operations. PHMSA needs final SBD SP lengths before Nov-17 DRAFT FERC EIS to allow cooperating agencies to comment. Have about 10 months after filing to SBD SPA to modify SBD MPs. Alaska LNG Project should discuss with PHMSA before segments submitted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 2                       | <ul> <li>Timing of air quality data and implications for the EIS schedule.</li> <li>Maggie advised of the following implications for timing of submittal of air quality data after the FERC application <ul> <li>Submittal of air quality data 2-3 mths after the FERC application is unlikely to affect the draft EIS schedule.</li> <li>Submittal of air quality data 6-7 mths after the FERC application is likely to delay the draft EIS schedule.</li> </ul> </li> <li>Maggie emphasized that changes in project information are expected and can be managed, over the life of the project. This was caveated on the basis that increases in impacts and significant changes to project scope are more likely to cause delays to the EIS schedule due to requirements for re-work, as opposed to reduction in impacts and insignificant changes to project scope.</li> </ul> |                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 11:30am                                                                                                                                                                                                                                                                                                       |                                                                                       |        |         |            |

| 3    | <ul> <li>Maggie provided general guidance as to the approach the project should take to generation of air quality content for the draft 2 and final RR 9, with consideration for the lack of engineering definition that may be available at different stages of the Draft 2 and /or final RR 9 development cycles.</li> <li>Use conservative bases for emissions estimates and impacts, to allow estimates to reduce as the project progresses. Significant increases in estimates and associated impacts are more likely to impact project schedule due to re-work, further consultation etc.</li> <li>Provide a range of emissions estimates if a definitive number is not yet available, or simply refer to the most conservative basis (as above). Maggie referred to the scenario where a range of vessel emissions could be generated based on a selection of different suitable vessel types, as a good example of how this principle could be applied.</li> <li>Provide generic equipment specifications if equipment selection is not yet finalized.</li> <li>Provide multiple options for mitigation measures under consideration, if the final recommendation is not yet available.</li> </ul> | Maggie Suter | 11:30am  |

| 1    | <ul> <li>Opportunities for Collaborative Research Reviewed the Draft Recovery Plan's Implementation Schedule in Section VII. Suggestions by NMFS for data collection efforts that could also help the Alaska LNG project with construction planning (need for mitigation and/or monitoring): <ul> <li>Participate as a collaborator on the photo-identification project being managed by LGL for the last 7 or 8 years. A large catalogue of data has been gathered on individual animals, indicating that the same animals are returning to the upper Cook Inlet each year. The study is also useful in assessing the presence of a calf since the researchers can get closer to the animals (versus aircraft), an indication of reproductive success. ConocoPhillips has supported this study since its inception, however is not supporting it in 2015 due to cost cutting measures. We could focus LGL's efforts between the Susitna and Beluga Rivers to help provide information for our project – NMFS could leverage their monies to gather data on the east of Fire Island and into Knik Arm.</li> <li>Conduct aerial surveys west of Fire Island to the Beluga River, as well as around the Kenai River (in spring and fall). This would provide information on presence/absence of the belugas in specific areas at specific times; information that would be valuable to the Alaska LNG as we plan our mitigation measures. This morphed into a discussion about the use of Unmanned Aerial Systems (UAS) for monitoring, likely at a lesser cost for a larger data set. Mandy referred me to Ro Bailey at UAF for further discussion about UAS'. NOAA has its own UAS division in Colorado and I discussed an upcoming UAS program in the Beaufort Sea this August by NMML.</li> </ul> </li> <li>Combining the photoidentification work with aerial would provide actual 'ground truthing' of the aerial surveys as well, a component that has been missing for the NMML program.</li> <li>Item #8 on pg 162. Long term habitat monitoring. This would feed into a larger ecosystem level program for Cook Inlet</li></ul> |        |      |  |  |  |

| 2       Data Sharing         • NMFS would like to see industry work together to share data amongst themselves but also with NMFS scientists. NMFS has hired Axiom to build a database for them where data can be housed and accessed by scientists. It will be called the Cook Inlet Beluga Whale Sightings Mapper and will be a sub layer to the larger data portal being developed by Alaska Ocean Observing System (AOOS). Item 31e makes reference to such a collaboration, which I agree should be pursued. NMFS has already developed a template for data submittal and future IHAs will have a requirement to upload monitoring data to this site.         In my discussions with other industry companies, I will cite the         NMFS' Species in the Spotlight Program |    |  |  |  |  |  |

| According to Mandy, NMFS has launched a "Species in the Spotlight:<br>Survive to Thrive" initiative. The Cook Inlet Beluga Whale is one of 8<br>NMFS' species nationwide to be highlighted in 2015 through a national<br>campaign. The goal is to raise public awareness about the beluga<br>whales.<br>More information on this program can be found at the following link:<br>http://www.nmfs.noaa.gov/stories/2015/05/05 14 15species in the spo                                                                                                                                                                                                                                                                                                                               |    |  |  |  |  |  |

| 1                                | 1 Special Permit Timing |                                     | PHMSA has discussed timing of SP issuance with FERC (Jim Martin).<br>PHMSA can initiate their public comment period when the DRAFT FERC<br>EIS is issued. The timeline that AKLNG showed PHMSA accurately<br>portrayed actions that PHMSA can take prior to the FEIS. PHMSA is<br>flexible with the SBD SP language to a time that works for the Project'<br>s schedule.<br>Conclusion: PHMSA is at this time uncertain if they can issue a SP<br>based on the FEIS or if the FERC ROD is required before a PHMSA SP<br>can be issued. |          |  |

| 2       | Meeting objective: review Alaska LNG's strategy, schedule and<br>approach to Section 106 compliance: PA, NRHP DOEs, strategies for<br>mitigating adverse effects, consulting parties, consultation and<br>compliance timeline.                                                                     |         |                                                                     |                 |             | Ned G      |       | 2 min      |
| 3       | Programmatic A<br>schedule                                                                                                                                                                                                                                                                         | greem   | ent (PA) process: consulting parti                                  | es, timeframe,  | Shina Duval |            | 5 min |            |
| 4       | PA notes: start early—major schedule risk is due to large # of consulting parties; correspondence, consultation and negotiations with rural villages can be time-consuming; need to ask FERC about their timeline for starting the PA process. FERC will ask the Applicant to draft the initia PA. |         |                                                                     |                 |             |            |       | 3 min      |
| 5       | PA will include, but not be limited to: survey protocols for re-routes<br>unanticipated discoveries protocols, avoidance, minimization<br>monitoring, and potential/proposed? mitigation strategies, and othe<br>procedures and commitments for satisfying Section 106 obligations.                |         |                                                                     |                 |             |            |       | 2 min      |
| 6       | PA timeframe = 6 to18 mos total for preparation and completion.                                                                                                                                                                                                                                    |         |                                                                     |                 | Shina D     |            |       | 2 min      |
| 7       | PA: can provide preliminary draft to rural communities for input early in the process, but important to note when doing so that Alaska LNG is not Caryn R predetermining the outcome of the PA process.                                                                                            |         |                                                                     |                 |             |            |       | 3 min      |
| 8       | PA will include addendums and appendices with protocols, treatment<br>plans & data recovery and other mitigation plans. Make sure the PA is<br>flexible enough to allow for the addition of additional eligible sites.                                                                             |         |                                                                     |                 |             | 3 min      |       |            |
| 9       |                                                                                                                                                                                                                                                                                                    |         | ossible when a project will adven n 106 will never stop a project.  | ersely affect a | Rich/Shi    | na/Ned     |       | 2 min      |

| 2       | Meeting objective: review Alaska LNG's strategy, schedule and<br>approach to Section 106 compliance: PA, NRHP DOEs, strategies for<br>mitigating adverse effects, consulting parties, consultation and<br>compliance timeline.                                                                     |         |                                                                     |                 |             | Ned G      |       | 2 min      |
| 3       | Programmatic A<br>schedule                                                                                                                                                                                                                                                                         | greem   | ent (PA) process: consulting parti                                  | es, timeframe,  | Shina Duval |            | 5 min |            |
| 4       | PA notes: start early—major schedule risk is due to large # of consulting parties; correspondence, consultation and negotiations with rural villages can be time-consuming; need to ask FERC about their timeline for starting the PA process. FERC will ask the Applicant to draft the initia PA. |         |                                                                     |                 |             |            |       | 3 min      |
| 5       | PA will include, but not be limited to: survey protocols for re-routes<br>unanticipated discoveries protocols, avoidance, minimization<br>monitoring, and potential/proposed? mitigation strategies, and othe<br>procedures and commitments for satisfying Section 106 obligations.                |         |                                                                     |                 |             |            |       | 2 min      |
| 6       | PA timeframe = 6 to18 mos total for preparation and completion.                                                                                                                                                                                                                                    |         |                                                                     |                 | Shina D     |            |       | 2 min      |
| 7       | PA: can provide preliminary draft to rural communities for input early in the process, but important to note when doing so that Alaska LNG is not Caryn R predetermining the outcome of the PA process.                                                                                            |         |                                                                     |                 |             |            |       | 3 min      |
| 8       | PA will include addendums and appendices with protocols, treatment<br>plans & data recovery and other mitigation plans. Make sure the PA is<br>flexible enough to allow for the addition of additional eligible sites.                                                                             |         |                                                                     |                 |             | 3 min      |       |            |
| 9       |                                                                                                                                                                                                                                                                                                    |         | ossible when a project will adven n 106 will never stop a project.  | ersely affect a | Rich/Shi    | na/Ned     |       | 2 min      |

| 1    | Summary of Meeting | The following are key takeaways • Significant clarification in DNV GL's understanding of the purpose of the SBD SP conditions related to mechanical testing, particularly FSTing. The purposes are to not only to evaluate the materials, but to verify the strain capacity models. This is particularly the case with the full scale test program. • SBD ITPR Extranet will be used for communicating key inputs and deliverables amongst the three parties (DNV GL, PHMSA and Alaska LNG Project), with documents labeled "confidential business information" as appropriate. • Comments to SBD SP conditions will occur using a multi-staged approached with DNV GL providing comments and questions by the end of August, which PHMSA and the project will respond to. Final DNV GL comments will be by end of December / January • |  |  |

| 1                           | Summary of Meeting                 |                   | <ul> <li>PHMSA's issuance of SPs is tied to the FERC Final EIS (May-18), not the FERC Record of Decision (ROD). PHMSA will be able to issue their own ROD 30-60 days after the FEIS. This keeps the issuance of PHMSA SPs off critical path and is the best timing we could expect given the legal/regulatory framework of FERC/NEPA.</li> <li>PHMSA took no objection to changing the requirement to provide SBD Plan 1 from six months prior to rolling plate for pipe to one month, so long as an ITPR is reviewing key AKLNG SBD Plan elements as they are being developed. This agreement, combined with the above bullet point, decreases the PHMSA SP schedule pressure.</li> <li>PHMSA is receptive to considering AKLNG's case for use of 3LPE in lieu of FBE via the "request for interpretation" process, with supporting information. This is a significant step since applying for a 3LPE Special Permit was no longer viable given the constraints of the FERC/NEPA schedule. On 20 Aug AKNLG will present a plan and schedule of delivery of supporting information for use of 3LPE to PHMSA.</li> <li>PHMSA reconfirmed that a switch from 42" to 48" diameter would have no significant PHMSA related impact. PHMSA saw benefit in AKLNG continuing with its 42" test program as the data would be used for verifying the strain capacity models.</li> </ul> |

#### **MEETING SUMMARY AND ACTION ITEMS**

|                              | Meeting Name:    | Alaska LNG – EPA Region 10 Air Quality Meeting |
|------------------------------|------------------|------------------------------------------------|
| Locations:<br>Seattle, WA    | Meeting Subject: | Alaska LNG Project Air Quality Discussion      |
| Call-in from other locations | Date of Meeting: | 8/5/2015                                       |
|                              | Doc. No:         | USAI-PE-SAMOM-00-000108-000                    |
| ATTENDED BY:                 | ORGANIZATION:    |                                                |

#### See attached attendee list

Summary

Meeting Objectives:

- 1. Familiarize the federal agency staff with the Alaska LNG project.
- 2. Obtain feedback about the proposed data sources for air quality and meteorology.
- 3. Obtain feedback about a general approach to modeling impacts from sources (under NEPA).
- 4. Identify other air quality related issues, under NEPA, that are not captured in the current plan.

The presentation by Alaska LNG closely followed the materials in the Power Point presentation, which was distributed to meeting participants. The focus of these notes is to identify questions and issues that were raised, and any key points of discussion.

- 1. FERC indicated that its prefiling process requires a minimum of 6 months. This time period ensures that applicants have sufficient time to address issues raised by stakeholders.
- John Notar (NPS) requested that the PM<sub>2.5</sub> analysis include elemental carbon in the modeled emissions as a separate species to reflect diesel exhaust emissions during construction. He also requested that VISCREEN modeling include this parameter as "soot."
- The status of proposed meteorological monitoring at Deadhorse is that a QAPP has been submitted to ADEC for review. Approval is pending. Alaska LNG expects to have this station operational in 4Q15. This station will include 2-meter temperature for delta T.
- 4. EPA suggested that Alaska LNG account for ozone and secondary PM<sub>2.5</sub>.
- 5. Alaska LNG suggested SO<sub>2</sub> modeling may not be needed at compressor stations due to low potential SO<sub>2</sub> emissions from combustion of pipeline-quality gas.
- 6. NPS requested that AERMOD be used for modeling deposition for nitrogen and sulfur, although sulfur emissions will be very low. Nitrogen deposition modeling may suffice if sulfur emissions are confirmed to be insignificant.
- 7. Alaska LNG expects to install new combustion turbines with dry low NOx combustion technology only. SCR and ammonia are not expected to be used.
- 8. Alaska LNG expects  $NO_X$  concentration in turbine emissions to be about 15 ppm at 15%  $O_2$ .  $NO_X$  concentration will definitely be below the applicable NSPS limit.
- 9. A question was raised about background SO<sub>2</sub> data. Denali SO<sub>2</sub> data is somewhat dated (late 1990s) so datasets from farther away may be used to characterize background concentrations.
- 10. John Notar noted that the Bettles site has an IMPROVE monitoring system, which includes ammonia and an NADP (National Atmospheric Deposition Program) dataset.

#### MINUTES OF MEETING

# Alaska LNG EPA Meeting – Seattle, WA – 8/5/2015

|     | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11. | Kenai Airport National Weather Service meteorological data is a possible backup data source for modeling the LNG site. Alan Schuler (ADEC) indicated that the Kenai Airport data have been used in previous modeling for the same area, and would be representative of the LNG Plant location.                                                                                                                                                                                                                                               |
| 12. | ADEC pointed out that the 10-m wind data at the new LNG monitoring site may not meet the PSD quality criteria because the anemometer is impacted by nearby trees. Modeling will be conducted using the 30-m and 60-m data.                                                                                                                                                                                                                                                                                                                   |
| 13. | Herman Wong (EPA) indicated that modeling of GMT1 in the recent SEIS used a North Slope WRF dataset for 2009-12. This dataset is available to AK LNG from Bret Anderson (USFS) or Tim Allen (USFWS).                                                                                                                                                                                                                                                                                                                                         |
| 14. | Herman Wong will check if the University of Alaska has a newer WRF dataset for Southcentral Alaska and Cook Inlet.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 15. | After further research into the availability and quality of ambient air quality datasets identified in the modeling approach for the pipeline route, several adjustments were suggested by Alaska LNG. These included for NO <sub>2</sub> using either Donlin Gold ambient AQ data or the ADEC default background concentration for minor source fast track permitting, and, rather than using Denali NPS data for SO <sub>2</sub> , using either Umiat or Donlin Gold SO <sub>2</sub> data. No objections were raised to these suggestions. |
| 16. | Conformity was mentioned, but no comments were provided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 17. | EPA suggested that Alaska LNG include a review of Environmental Justice including air quality impacts on low income or indigenous peoples. Alaska LNG indicated that this topic will be covered in RR8.                                                                                                                                                                                                                                                                                                                                      |
| 18. | EPA indicated that this meeting is the earliest the agency has ever been contacted about a project this size for inclusion in NEPA. Specific EPA comments included:                                                                                                                                                                                                                                                                                                                                                                          |
|     | <ul> <li>For calculating emissions, document data sources and assumptions. EPA may have concerns if some<br/>calculations are not well based.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                     |
|     | b. Do not use optimistic calculations or assumptions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|     | c. Provide a basis and citation for emission factors, and include a copy of a referenced report if the data are not readily available on the web.                                                                                                                                                                                                                                                                                                                                                                                            |
|     | <ul> <li>For fugitive dust, do not make optimistic assumptions about emission control (such as 90 percent<br/>emission control for watering). Be realistic rather than optimistic and use real data to support<br/>assumptions if possible.</li> </ul>                                                                                                                                                                                                                                                                                       |
| 19. | NPS requested that the cumulative air impact analysis review existing stationary sources within 300 km of the site to determine if those sources should be included in the modeling.                                                                                                                                                                                                                                                                                                                                                         |
| 20. | Several requests were made by agencies for a formal modeling protocol with complete details for the GTP, pipeline, and LNG Plant. The high level modeling approach provided by Alaska LNG in June did not have sufficient detail to ensure that modeling would meet agency expectations. Alaska LNG indicated that it intends to provide a modeling protocol once sufficient project details are available. However, a timeline for this action has not yet been established.                                                                |
| 21. | Participants inquired about the use of the latest AERMOD model version, which was just released in late July 2015 (version 15181). Alaska LNG indicated that it would likely use the former AERMOD version for Draft 2 RR9, but would likely switch to the new version for the final FERC application. Alan Schuler indicated that ADEC expected use of the latest version for air permitting.                                                                                                                                               |
| 22. | NPS expects construction emissions to be modeled to determine impacts. As an example of a typical project in close proximity to an environmentally sensitive area, John Notar cited a highway construction project adjacent to a Lower 48 National Park where NPS requested modeling of construction emissions.                                                                                                                                                                                                                              |
| 23. | Alaska LNG stated that RR9 Draft 2 will not include visibility modeling, but the final application will.                                                                                                                                                                                                                                                                                                                                                                                                                                     |

### MINUTES OF MEETING

#### Alaska LNG EPA Meeting – Seattle, WA – 8/5/2015

#### Summary

- 24. Andrea Stacy (NPS) requested further details to understand how the cumulative modeling will be conducted. In addition, she sought more details to confirm the Q in Q/D, including an opportunity to review the Q data before moving ahead with the modeling. Need critical assumptions for emissions.
- 25. John Notar asked if Alaska LNG could make a proposal for cumulative analysis with CALPUFF, for several sources and major construction activities to NPS, USFWS, and EPA Region 10.
- 26. The agencies encouraged conference calls to discuss progress and resolve details as the project goes forward. Conference calls are a more efficient use of time than written correspondence.

|           | with the FERC application. The POD will remain as draft until after the FERC FEIS is complete.         Workshops before and after the Draft POD is filed to address issues and topics to are acceptable to BLM . The first workshop would include a review and discussion of a Table of Contents for the POD.         Ahtna land that is BLM selected should be included with the Draft POD. BLM will transfer title of the land to Ahtna prior to the ROW Grant issuance.         The POD needs to address any 17b easements crossed by the Project. The crossing needs to ensure access on that easement during construction. If the easement cannot be accommodated, the Project will need to show an acceptable alternative access.         The Central/Yukon RMP was discussed. BLM advised that any space for snow removal should be included in the construction ROW. |       |                                                     |               |            |                 |           |        |  |  |
