LNG FACILITIES GROUNDWATER SAMPLING AND TESTING REPORT - EVENT 1
ONSHORE LNG FACILITIES
ALASKA LNG PROJECT
NIKISKI, ALASKA

Fugro Consultants, Inc. (Fugro) is pleased to present this groundwater quality monitoring event report for the onshore facilities of the Alaska LNG Project (AKLNG) located in Nikiski, Alaska. Our services were authorized under Service Work Order No. AKLNG-FUG-US-005 Rev 0, dated March 2, 2016 in accordance with the Service Agreement No. A2275592 between Fugro and ExxonMobil Global Services Company, dated October 29, 2012. Fugro has been providing services for the proposed AKLNG Project since 2014.

We appreciate the opportunity to be of service to EMALL. Please call Mr. Abhishek Shethji, P.E., Fugro's Project Manager at (713) 369-5431, if you have any questions or comments concerning this report, or when we may be of further assistance.

Sincerely,

FUGRO CONSULTANTS, INC.
TBPE Firm Registration No. 299

1.0 INTRODUCTION

1.1 PROJECT DESCRIPTION

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, and ExxonMobil Alaska LNG LLC (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce and opportunities for in-state deliveries of natural gas.

The Natural Gas Act (NGA), 15 U.S.C. § 717a(11) (2006), and Federal Energy Regulatory Commission (FERC) regulations, 18 C.F.R. § 153.2(d) (2014), define "LNG terminal" to include "all natural gas facilities located onshore or in State waters that are used to receive, unload, load, store, transport, gasify, liquefy, or process natural gas that is ... exported to a foreign country from the United States." With respect to this Project, the "LNG Terminal" includes the following: a liquefaction facility (Liquefaction Facility) in Southcentral Alaska; an approximately 804-mile gas pipeline (Mainline); a gas treatment plant (GTP) on the North Slope; an approximately 62-mile gas transmission line connecting the GTP to the PTU gas production facility (PTU Gas Transmission Line or PTTL); and an approximately 1-mile gas transmission line connecting the GTP to the PBU gas production facility (PBU Gas Transmission Line or PBTL). All of these facilities are essential to export natural gas in foreign commerce.

The new Liquefaction Facility would be constructed on the eastern shore of Cook Inlet just south of the existing Agrium fertilizer plant on the Kenai Peninsula, approximately 3 miles southwest of Nikiski and 8.5 miles north of Kenai (Plate 1). The Liquefaction Facility would include the structures, equipment, underlying access rights, and all other associated systems for final processing and liquefaction of natural gas, as well as storage and loading of LNG, including terminal facilities and auxiliary marine vessels used to support Marine Terminal operations (excluding LNG carriers [LNGCs]). The Liquefaction Facility would include three liquefaction trains combining to process up to approximately 20 million metric tons per annum (MMTPA) of LNG. Two 240,000-cubic-meter tanks would be constructed to store the LNG. The Liquefaction Facility would be capable of accommodating two LNG carriers. The size of LNGCs that the Liquefaction Facility would accommodate would range between 125,000–216,000-cubic-meter vessels.

EMALL contracted Fugro to investigate the site conditions of the onshore LNG facilities, marine LNG Terminal, and marine pipeline corridors. A plan of completed onshore explorations and the water quality well sampling locations are presented on Plate 2 and Plate 3. This report presents the results of the baseline groundwater quality sampling and testing study for the onshore LNG facilities conducted during the 2016 geophysical and geotechnical site investigation (G&G) program at the Alaska LNG site (Site) near Nikiski, Alaska (Plate 1).

A list of the reports (including the superseded reports) that are generated by Fugro as part of 2014, 2015 and 2016 G&G programs are presented in the table below. A copy of the below table is also separately submitted to AKLNG under document number USAL-FG-BRCTL-00-000001-000[1].

Summary of Fugro Reports Developed for 2014, 2015 and 2016 G&G Programs

[5] Fugro Report No. 04.10160001-12 supersedes Fugro Report Nos. 04.10140094-12 and 04.10140334-14.

1.2 GENERAL SCOPE OF WORK

Fugro prepared this report to document the sampling and analyses of groundwater monitoring wells at the Alaska LNG site (Site) near Nikiski, Kenai (see Plate 1 – Vicinity Map). Since 2014, Fugro has completed multiple phases of investigations at the Site including the completion of eighty-seven (87) borings and the installation of twenty-six (26) groundwater monitoring wells. Locations of the borings and wells are depicted on Plate 2 – Investigation Plan.

For this event, water sampling and testing activities were conducted in accordance with an approved Project Execution Plan (PEP) (USAL-FG-GPZZZ-00-002016-001). Specific deviations from the PEP, which were discussed with the Client prior to implementation included the following:

- Three (3) Third-Party wells were also sampled during this baseline monitoring event.

1.3 LIMITATIONS

Fugro makes no claim or representation concerning any activity or condition falling outside the specified purposes to which this report is directed. We have conducted our work using the standard level of care and diligence normally practiced by recognized engineering firms now performing similar services under similar circumstances. We intend for this report, including all illustrations, to be used in its entirety. The information presented in this report may not apply to locations not explored by borings or areas outside the project boundaries. This information should be made available to prospective users for information only, and not as a warranty of subsurface conditions.

1.4 ELEVATION DATUMS

All coordinates are reported in Zone AK4 North, NAD83 (NSRS 2007), and are in feet. Topographic elevations for onshore areas are referenced to NAVD88. It should be noted that the marine report is referenced to Mean Low Lower Water (MLLW). The following conversion formula is used to convert the elevations from MLLW to NAVD88:

- Elevation, in feet (NAVD88) = Elevation, in feet (MLLW) – 7.32 feet

Please note that this conversion formula is only applicable at Nikiski Area. Elevations presented in this report, and the corresponding illustrations and engineering plates are all referenced to the NAVD88 datum, unless noted otherwise.

2.0 GROUNDWATER SAMPLING AND TESTING ACTIVITIES

2.1 SAMPLING ACTIVITIES

On April 19 through 23, 2016, field personnel from Fugro and SLR International Corp (SLR, a subcontractor retained by Fugro to assist with sampling activities) visited the Site to conduct the baseline groundwater sampling event. Wells which were sampled during this event are summarized in Table 1, and included six wells completed into the first water bearing unit below the Site (Water Bearing Unit 1: MW-27B, MW-39B, MW-50B, MW-74B, MW-82B, and MW-87B), six wells completed into the second encountered water bearing unit (Water Bearing Unit 2: MW-39A, MW-50A, MW-62A. MW-74A, MW-82A, and MW-91A), and three Third-Party wells (TPW-1, PQW-1, and TPW-2). The locations of all wells is shown on Plate 3 – Water Quality Well Sampling Locations – Event 1.

Depth to groundwater data was obtained on April 7, 2016 from all the Site monitoring wells by reviewing water level data collected by Micro-Diver water level data logger units previously installed in the monitoring wells. Prior to purging and sampling, the depth to groundwater was also measured in all monitoring wells to be sampled and in two of the Third-Party wells (TPW-1 and PQW-1) using a water level indicator probe. The TPW-2 well is an active, surface sealed potable well and the depth to groundwater was not measured. Groundwater depth measurements and elevations are summarized in Table 2.

Industry-standard sampling protocol was employed during the event in accordance with ASTMD 5903/4448 and with Alaska Department of Environmental Conservation (ADEC) Alaska guidelines. All wells were purged prior to drawing samples. For TPW-2, the well was purged by activating the well pump for about 10 minutes while monitoring for water quality parameters listed above. Field personnel

collected a water sample from the end of the existing garden hose reportedly attached to the well head system. Field personnel purged all other wells using a low-flow submersible pump, maintaining a pumping rate between 0.1 to 0.5 liters per minute. During purging, water levels were periodically checked with a water level indicator to monitor drawdown. Wells were purged at the low-flow rates while continuously monitoring for changes in water pH, turbidity, dissolved oxygen (DO), conductivity, Oxidation-Reduction Potential (ORP), and temperature using a flow-through cell. Water quality field parameters are summarized in Table 3. Once these parameters stabilized, purging was stopped, and water samples were obtained using low-flow pumping methods. Groundwater samples were retained in analyte-appropriate containers pre-cleaned by the laboratory in accordance with Environmental Protection Agency (EPA) protocols.

Duplicate samples were also collected during the sampling event to provide quality assurance (QA) data. The duplicate samples were collected from monitoring wells MW-74A, MW-87B, and MW-91A, and from Third-Party well TPW-1.

All sampling containers were uniquely labeled and placed in ice-filled coolers, pending delivery to the testing laboratory. Well sampling forms are presented in Appendix A.

Purge water and other investigation-derived waste liquids were containerized and temporarily stored at the ASRC Rig Tenders yard, until removed and disposed offsite on June 15, 2016. A copy of the non-hazardous waste manifest is presented in Appendix B.

2.2 CHEMICAL AND ANALYTE TESTING PROGRAM

Due to short hold time restrictions on select analyses, groundwater samples were packed and shipped daily under chain-of-custody documentation to SGS North America Inc. (SGS) in Anchorage, Alaska. Groundwater samples collected during this event were analyzed for some or all of the following parameters (see Table 1 for details):

Parameter	Method
Water Quality Suite	
Hardness	SM2340B
Alkalinity	SM21 2320B
Nitrate/Nitrite	SM21 4500NO3-F
Total Dissolved Solids (TDS)	SM21 2340C
Total Suspended Solids (TSS)	SM21 2340D
Turbidity	SM21 2130B
Chloride, Sulfate, Fluoride	EPA 300.0
pH	SM21 4500-H B
Metals (total and dissolved)	
Total Metals – Al, As, Ba, Be, Ca, Cd, Cr, Co, Cu, Fe, K, Pb, Mg, Mn, Mo, Na, Ni, Sb, Se, Tl, V, Zn	EPA 200.8
Total Mercury	EPA 1631E
Dissolved Metals – Al, As, Ba, Be, Ca, Cd, Cr, Co, Cu, Fe, K, Pb, Mg, Mn, Mo, Na, Ni, Sb, Se, Tl, V, Zn	EPA 200.8
Dissolved Mercury	EPA 1631E
Organics	
Volatile Organic Compounds	SW8260B
Semi-Volatile Organic Compounds	SW8270D
Petroleum Hydrocarbons	
Gasoline Range Organics	AK101
Diesel Range Organics	AK102
Residual Range Organics	AK103

Field pH values measured within about 15 minutes of collection are judged in the environmental assessment practice to be more representative than those measured in the laboratory. Field and laboratory measured pH values are both presented in Table 3.

2.3 ADDITIONAL SAMPLING ACTIVITIES CONDUCTED BY OTHERS

Following the initial review of laboratory data for Third-party potable well PQW-1 (refer to Section 5.4 for additional information), AKLNG requested that AECOM purge and resample the well. On June 7, 2016, AECOM removed approximately 150 gallons using a purge rate of 2 gallons per minute (gpm), while monitoring for water quality parameters listed above. Once 150 gallons were removed, AECOM slowed the pump rate to 0.5 gpm to facilitate sample collection. Groundwater samples were retained in analyte-appropriate containers pre-cleaned by the laboratory in accordance with EPA protocols. A duplicate sample was also collected. Well sampling forms are presented in Appendix A. Purge water and other investigation-derived waste liquids were containerized and temporarily stored at the ASRC Rig Tenders yard, until removed and disposed offsite on June 15, 2016. A copy of the non-hazardous waste manifest is presented in Appendix B.

Groundwater samples were packed and shipped under chain-of-custody documentation to SGS for analyses. One groundwater sample and one duplicate sample were analyzed for the following:

Parameter	Method
Organics	
Volatile Organic Compounds	SW8260B
Semi-Volatile Organic Compounds	SW8270D
Petroleum Hydrocarbons	
Gasoline Range Organics	AK101
Diesel Range Organics	AK102
Residual Range Organics	AK103

3.0 SUBSURFACE CONDITIONS

Three distinct water bearing zones have been identified during the previous 2014 and 2015 field investigations. Previous investigations installed wells within Water Bearing Units 1 and 2, which are the subject of this monitoring event.

The first encountered water bearing unit (Water Bearing Unit 1) is found within the Killey geologic unit, is unconfined, and was observed across the Site at elevations ranging between 100.12 feet (NAVD88) (at the location of well MW-82B) and 72.62 feet (NAVD88) (at the location of well MW-39B). This groundwater unit was observed present at shallower depths in proximity to surface water bodies.

Five of the groundwater monitoring wells targeting Water Bearing Unit 1 remain dry, consistent with observations made following well installation. This confirms that perched water conditions were observed during well installation, and suggests variable groundwater conditions exist within Water Bearing Unit 1. All of the dry wells are also located in the western, near-shore portion of the Site. Groundwater levels in Water Bearing Unit 1 also appear to drop as the water surface coincides with the point of discharge along the Kiley-Moosehorn transition zone along the western face of the shoreline bluff.

Water Bearing Unit 2 is present within the Moosehorn geologic unit, is semi-confined, and lies immediately beneath the Killey-Moosehorn transition zone. The potentiometric surface (the surface to which water in a confined aquifer will rise within a well) elevation in Water Bearing Unit 2 was observed ranging between 95.18 feet (NAVD88) (at the location of well MW-82A) and 16.73 feet (NAVD88) (at the location of well MW-91A). This elevation range is reflective of conditions at the most upgradient and most downgradient locations, respectively.

The groundwater surface (unconfined aquifer) and potentiometric surface (confined aquifer) elevations, as measured through April 8, 2016 using Micro-Divers installed in Site wells, are presented in Table 2. The wells cover a large spatial area, and top of well casing elevations vary from 97.75 feet (NAVD88) at well MW-39A in the southern portion of the Site to 136.24 feet (NAVD88) at well MW-14B about 5,000 feet to the north. Graphical depictions of the variation in groundwater surface elevations

within the wells, as recorded by the Micro-Divers are presented on Plates 4 and 5. It should be noted that a 7.1M earthquake occurred in the Site vicinity on January 24, 2016. Groundwater levels and/or the well casing itself at select well locations showed a response to the earthquake as captured by the Micro-Divers. The surface elevations were not re-surveyed following the earthquake event. The Micro-Diver in well MW-98B also recorded an anomalous drawdown condition possibly representative of local water withdrawal in the vicinity of the well between December 2015 to April 2016.

We also note that groundwater within well MW-98B measured at 90 feet (NAVD88) during this event, which represents a higher elevation than groundwater levels within nearby wells. With the exception of the period between November 2015 and March 2016, groundwater within this well has measured anomalously high compared to the other wells since installation. Between November 2015 and March 2016, this well showed a decrease in groundwater elevation which may be attributed to local groundwater use. The cause of the anomalous changes in groundwater elevation at this well is unknown.

Graphical depictions of the groundwater contours of the first and second water bearing units below the Site (Water Bearing Units 1 and 2) are presented as Plates 6 and 7. In general, groundwater flow within both water bearing units is in a westerly/southwesterly direction toward Cook Inlet. Groundwater gradients do fluctuate in both water bearing units as the water flows from east to west. The groundwater gradient within Water Bearing Unit 1 is 0.01 ft/ft and ranges between 0.01 to 0.04 ft/ft within Water Bearing Unit 2.

4.0 DATA QUALITY ASSESSMENT

For this event, a quality assurance program was implemented which evaluated project administration, sampling, quality control, and data review. The analytical laboratory data was reviewed for consistence with project specific requirements[2], *Alaska Department of Environmental Conservation (ADEC) Technical Memorandum, Environmental Laboratory Data and Quality Assurance* requirements (2009a), analytical method criteria, and internal laboratory criteria. The data review process included the following:

- Review of COC records for completeness, signatures, and dates;
- Identification of any sample receipt or preservation anomalies that could impact data quality;
- Verification that quality control blanks (field blanks, equipment blanks, trip blanks, etc.) were properly prepared, identified, and analyzed;
- Evaluation of whether laboratory reporting limits met project goals;
- Review of calibration verification recoveries to cofirm that the laboratory did not identify that any Calibration Verifications (CCV) recoveries or other calibration related criteria were outside applicable acceptance limits;
- Verification that surrogate analyses were within recovery acceptance limits;

[2] Method Statement, Alaska LNG Well Sampling, Issue 1 Rev 1, dated April 28, 2016.

- Verification that Laboratory Control Samples (LCS), Laboratory Control Sample Duplicates (LCSD), Matrix Spike (MS), and Matrix Spike Duplicates (MSD) were within recovery acceptance limits;
- Evaluation of the result relative percent difference between primary and duplicate field samples, LCS/LCSD, MS/MSD, and laboratory duplicates; and
- Providing an overall assessment of laboratory data quality and qualifying sample results if necessary.

SLR adhered to required and established sampling and chain-of-custody (COC) protocols as observed in the field by Fugro and by review of all field documents prepared by SLR. Based on these observations, we judge that the data collection methods were sufficient to provide representative samples for testing. It was noted that on occasion, samples included on one COC would be shipped in multiple coolers. While the laboratory did not flag any samples as being received at a temperature that would suggest sample integrity was a concern, for future events, samples documented on one COC will be prepared for each cooler. This change will allow better monitoring of the temperatures of each cooler.

SGS, the chemical testing laboratory which conducted all the testing for this event, maintains an internal quality assurance program and standard operating procedures. SLR completed a Quality Assurance Review (QAR) for the groundwater monitoring well data and one for the potable water data. SLR's findings are presented in *Laboratory Data Quality Assurance Review, April 2016 Potable Well Monitoring, Nikiski, Alaska, Alaska LNG*, dated May 31, 2016 and *Laboratory Data Quality Assurance Review, April 2016 Groundwater Monitoring, Nikiski, Alaska, Alaska LNG*, dated June 6, 2016 (Appendix C).

For non-detect results, limits of detection (LODs) were compared to applicable cleanup levels for the site. For groundwater samples, LODs were compared to 18 AAC 75.345, Table C, groundwater cleanup levels. All results of non-detected analytes had LODs at or below the applicable cleanup levels, except as noted in Appendix 1 of the QAR.

Appendix 1 of the QAR shows results of select non-detected analytes with LODs and Detection Limits (DL) not meeting project limits. All affected analytes were either VOCs by SW8260 and SVOCs by SW8270D. For all affected analytes presented in the QAR Appendix 1 table, typical methodology limitations caused the LOD and DL to not meet project goals, but in our opinion the data is still useable for this investigation. Additional laboratory testing will be performed during the next monitoring event to improve LOD compliance. Affected analytes are highlighted in Tables 5 through 9.

Based on these QAR findings, we judge that the data from this event is valid and can be relied upon for the purpose of this investigation. Please note that data collected during AECOM's sampling of Third-party potable well PQW-1 is also included in this report as the data was collected and associated with the data generated during the baseline event. However, the AECOM data package provided for Fugro's review did not include a QAR.

5.0 RESULTS OF GROUNDWATER QUALITY ANAYLSIS

Groundwater analytical results are summarized in Tables 5 through 9, and the analytical laboratory reports are presented in Appendix D. Table 4 is provided as a cross-reference between the site Well Identifications (ID) and laboratory and field sample IDs. Analytical results were compared to ADEC groundwater cleanup levels from 18 AAC.75.345 Table C (May 8, 2016). Data presented in Tables 6 and 9 were also compared to ADEC's General Discharge Permit AKG003000 Table 3 criteria.

Tables 7 and 8 provide a summary of analyses for wells located in either Water Bearing Unit 1 and 2, respectively. A summary of select data results is presented below.

5.1 WATER BEARING UNIT 1

No VOCs, SVOCs, or PAHs were detected in the six wells sampled during this monitoring event.

Detected petroleum hydrocarbon concentrations were well below respective ADEC Table C groundwater cleanup levels. Analyses detected gasoline range organics in one of the six wells sampled (MW-39B) at a concentration of 0.0388 milligrams per liter (mg/L). Diesel range organics were only detected in well MW-27B at 0.197 mg/L. Additionally, residual range organics were detected in two out of six wells at concentrations of 0.561 (MW-27B) and 0.823 mg/L (MW-74B).

Detected total and dissolved metal concentrations were below respective ADEC Table C groundwater cleanup levels, where established.

pH values measured in the field varied from 6.40 to 7.93 Standard Units (SU).

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride in all six wells varying from 11.8 mg/L to 113 mg/L (Highest concentration detected in samples from MW-39B.)
- Alkalinity in all six wells varying from 40.6 mg/L to 58.2 mg/L (MW-27)
- Hardness as $CaCO_3$ in all six wells varying from 55.8 mg/L to 118 mg/L (MW-39B)

5.2 WATER BEARING UNIT 2

No diesel range organics, VOCs, or SVOCs were detected in the six wells sampled during this monitoring event.

Detected petroleum hydrocarbon concentrations were well below respective ADEC Table C groundwater cleanup levels. Analyses detected gasoline range organics in one of the six wells sampled (MW-39A) at a concentration of 0.0539 mg/L. Residual range organics were detected in one of six wells at a concentration of 0.352 mg/L (MW-74A).

Various total metals were detected in all six monitoring wells sampled. With the exception of arsenic, detected total metals were well below respective ADEC Table C groundwater cleanup levels, where established. Analyses detected arsenic at concentrations ranging from 0.0077 mg/L to 0.0634 mg/L, exceeding the ADEC Table C groundwater cleanup level of 0.01 mg/L in MW-39A, MW-50A, MW-62A, and MW-74A.

Various dissolved metals were also detected in the six wells sampled at concentrations below respective ADEC Table C groundwater cleanup levels, where established.

pH values measured in the field varied from 8.37 to 9.99 SU.

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride in all six wells varying from 4.33 mg/L to 10.4 mg/L (MW-91A)
- Alkalinity in all six wells varying from 61.3 mg/L to 97.4 mg/L (MW-50A)
- Hardness as $CaCO_3$ in all six wells varying from 42.9 mg/L to 105 mg/L (MW-50A)

5.3 COMPARISON OF WATER QUALITY DATA BETWEEN WATER BEARING UNITS

As this is only the baseline event, it is difficult to draw meaningful conclusions with only one data point. However, differences in water quality do exist between the water bearing units. Of particular note is the presence of arsenic values that were detected at an order of magnitude higher in Water Bearing Unit 2 wells than in Water Bearing Unit 1 wells. Water Bearing Unit 2 also had higher levels of pH and alkalinity than Water Bearing Unit 1.

5.4 THIRD-PARTY WELLS

Analyses detected select VOCs including 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, benzene, ethylbenzene, m,p-Xylene, and styrene in the potable wells analyzed. With the exception of benzene, detected VOCs were below respective ADEC Table C groundwater cleanup levels. Benzene was detected in well PQW-1 at 0.0677 mg/L during the April 2016 sampling event. Results of testing completed by AECOM in June following the purging of 150 gallons of water from the well, reported a significant decrease in benzene concentrations (0.00073 mg/L), well under the ADEC Table C groundwater cleanup level of 0.005 mg/L.

No diesel range organics were identified in any of the potable wells sampled during this event. Analyses detected gasoline range organics in potable well PQW-1 at 0.204 mg/L in April. No gasoline range organics were detected during AECOM's resampling effort in June. Residual range organics were detected in April in all Third-Party wells at concentrations ranging from 0.221 mg/L (TPW-2), 0.419 mg/L (PQW-1), and 0.869 mg/L (TPW-1). Resampling of PQW-1 by AECOM in June, following the purging of 150 gallons of groundwater, reported a lower residual range concentration at 0.161 mg/L. All detected hydrocarbons were well below respective ADEC Table C groundwater cleanup levels.

Total (mono) Aromatic Hydrocarbons (TAHs; cumulative BTEX, chlorobenzene, and 1-2,1-3, 1-4-dichlorobenzenes concentrations) were detected ranging from 0.00083 mg/L to 0.0677 mg/L, exceeding ADEC's APT General Discharge permit criteria of 0.01 mg/L in well PQW-1. Additionally, Total Aqueous Hydrocarbons (TAqH; cumulative TAH and PAH concentrations) were detected ranging from 0.000129 mg/L to 0.0882 mg/L, exceeding ADEC's APT General Discharge permit criteria of 0.015 mg/L. However subsequent purging of the PQW-1 well significantly reduced the aqueous hydrocarbon component, therefore we anticipate encountering significantly lower TAqH levels to below the General Discharge permit criteria.

Various total metals were detected in all three potable wells sampled. With the exception of arsenic, detected total metals were well below respective ADEC Table C groundwater cleanup levels, where established. Analyses detected arsenic at 0.000555 mg/L (PQW-1) and 0.0143 mg/L (TPW-2), exceeding the ADEC Table C groundwater cleanup level of 0.01 mg/L in TPW-2. Various dissolved metals were also detected in the three potable wells at concentrations below respective ADEC Table C groundwater cleanup levels, where established.

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride in all three wells varying from 4.2 mg/L to 24.1 mg/L (PQW-1)
- Alkalinity in all three wells varying from 41.8 mg/L to 63.6 mg/L (TPW-2)
- Hardness as $CaCO_3$ in two wells at 55.4 mg/L (PQW-1) to 69.7 mg/L (PQW-1)

5.5 CONDITIONS IN THE VICINITY OF THE FORMER QUARRY PIT

Groundwater monitoring wells MW-27B and MW-87B, and the three Third-party potable wells (TPW-1, PQW-1, and TPW-2) are located in the general vicinity of the Former Quarry Pit.

In April 2016, petroleum hydrocarbons including gasoline range (up to 0.204 mg/L, PQW-1), diesel range (0.197 mg/L, MW-27), and residual range organics (up to 0.869 mg/L, TPW-1) were identified in groundwater within the quarry area. Analyses also detected the presence of select VOCs and SVOCs in groundwater within the potable water wells, with benzene detected up to 0.0677 mg/L, exceeding ADEC's Table C groundwater cleanup level of 0.005 mg/L. As previously discussed, subsequent purging of PQW-1 by AECOM in June, significantly reduced benzene to 0.00073 mg/L, well under the ADEC Table C groundwater cleanup level of 0.005 mg/L, and the purging would also have a significant reduction of the TAqH concentration to below the General Discharge permit criteria.

Various total metals were detected in all wells located in the vicinity of the quarry. With the exception of arsenic, detected total metals were well below respective ADEC Table C groundwater cleanup levels, where established. Analyses detected arsenic up to 0.0143 mg/L, exceeding ADEC's Table C groundwater cleanup level and APT General Discharge Permit criteria of 0.01 mg/L in TPW-2. Various dissolved metals were also detected in the three potable wells at concentrations below respective ADEC Table C groundwater cleanup levels, where established.

For the water quality testing suite, testing reported the following:

- Chloride up to 30.6 mg/L (MW-27)
- Alkalinity up to to 63.6 mg/L (TPW-2)
- Hardness as $CaCO_3$ up to 77.1 mg/L (MW-27)

6.0 CONCLUSIONS AND RECOMMENDATIONS

A total of twelve (12) groundwater monitoring wells and three (3) Third-Party wells were sampled during this baseline monitoring event. Additional monitoring events are required to provide comparative data for trend analysis.

The monitoring event identified a potential concern with respect to water quality in the area of the Former Quarry where aquifer pump test water may be discharged during planned 2016 aquifer pump testing. Groundwater in the area of the quarry has been shown to contain arsenic and benzene at concentrations above ADEC's screening criteria for a potential discharge. It is acknowledged that purging had a localized effect on the water quality in well PQW-1.

Water Bearing Unit 2 water samples did show generally higher arsenic, pH and alkalinity than water samples from Water Bearing Unit 1. These and other differences in quality, need to be considered when evaluating the overall effect of discharging water from one water bearing unit into another.

ADEC has requested additional water quality data to facilitate their formal evaluation of conditions in the proposed discharge area at the Former Quarry, and their assessment of significance, if any, of changes in water quality which may result from a discharge of extracted groundwater from one water bearing unit into another. The additional water quality data would comprise results from the extraction wells and possibly additional data from existing local monitoring and Third-Party wells. Additional laboratory analytical testing will also be conducted during the next monitoring event to improve LOD compliance issues for select analytes identified during this event.

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
3 - The field sample identification number, date collected, and laboratory sample identification numbers for the total and dissolved fractions are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than
10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening levels
corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf

Abbreviations

-- Not applicable or screening criteria does not exist for this compound
AAC Alaska Administrative Code
ADEC Alaska Department of Environmental Conservation
DL Detection Limit
LOD Limit of Detection
LOQ Limit of Quantitation
PAH Polycyclic Aromatic Hydrocarbon
SVOCs Semi-volatile Organic Compounds
VOCs Volatile Organic Compounds

Sample results exceeding the screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Nondetect, LOD is in brackets in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.

Notes:

1 - This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016.
https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
2 - This screening level corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
3 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than 10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU.
6 - Turbididy shall not have more than a 10% increase when the natural condition is more than 50 NTU, not to exceed a maximum increase of 15 NTU. Shall not exceed 5 NTU over natural conditions for all lake waters. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6). http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf

Sample result exceeded the most stringent screening criteria (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the most stringent screening level (light blue shading).

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Nondetect, LOD is in brackets in the concentration column.
QH	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
TAH	Total (mono) Aromatic Hydrocarbon = Benzene, Chlorobenzene, Toluene, Ethylbenzene, 1-3, 1-4, and 1-2 di-Chlorobenzenes and total Xylenes (sum of m, p, and o-Xylene).
TAqH	Total Aqueous Hydrocarbon = TAH + PAH
VOCs	Volatile Organic Compounds

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000 Hydrostatic GP Permit.pdf
3 - The field sample identification number, date collected, and laboratory sample identification numbers for the total and dissolved fractions are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than
10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf

Sample results exceeding the screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
VOCs	Volatile Organic Compounds

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Nondetect, LOD is in brackets in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000 Hydrostatic GP Permit.pdf
3 - The field sample identification number, date collected, and laboratory sample identification numbers for the total and dissolved fractions are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than 10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf

Sample results exceeding the screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
VOCs	Volatile Organic Compounds

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Nondetect, LOD is in brackets in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.

Notes:

1 - This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016.
https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
2 - This screening level corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
3 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than
10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU.
6 - Turbidity shall not have more than a 10% increase when the natural condition is more than 50 NTU, not to exceed a maximum increase of 15 NTU.
Shall not exceed 5 NTU over natural conditions for all lake waters. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6). http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf

Sample result exceeded the most stringent screening criteria (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the most stringent screening level (light blue shading).

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Nondetect, LOD is in brackets in the concentration column.
QH	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
SVOCs	Semi-volatile Organic Compounds
TAH	Total (mono) Aromatic Hydrocarbon = Benzene, Chlorobenzene, Toluene, Ethylbenzene, 1-3, 1-4, and 1-2 di-Chlorobenzenes and total Xylenes (sum of m, p, and o-Xylene).
TAqH	Total Aqueous Hydrocarbon = TAH + PAH
VOCs	Volatile Organic Compounds

APPENDIX A
WELL SAMPLING FORMS

SLR

Groundwater Sampling Form

Site/Client Name: Nikiski, AK	**Well ID:** MW-27
Project # : Water Quality Monitoring (WQM), AK LNG	Sample ID: MW27-0416
Sampled By: B Siwiec, Kyle Johnson	Sample Time: 1715 Sample Date: 4/19/16
Weather Conditions: Cloudy, light wind, high 40s	Duplicate ID: —
Sampling Method: ☒ Low Flow ☐ Other_____	MS/MSD ☐ Yes ☒ No Trip Blank Required: ☒ Yes ☐ No

Well Information

Well Type: ☒ Permanent ☐ Temporary	Well Diameter 2 in.	Screen Interval: 31 ft BGS to 51 ft BGS
Well Condition: ☒ Good ☐ Fair ☐ Poor (if fair or poor explain in Notes)		Stickup ☒ Yes ☐ No; If yes, _____ ft above ground

Gauging/Purging Information

Depth to Water (ft BTOC): 33.62	Tubing/Pump Depth (ft. BTOC): 43
Total Depth (ft BTOC): 58.15	Purge Start Time (24-hr) 1604
Depth to Product (ft. BTOC) NA	Purge End Time (24-hr) 1715
Product Thickness (ft) NA	Total Purge Time (min) 71

LOW FLOW: **Max Draw Down** = (Tubing Depth – Top of Screen Depth)_____ X 0.25 = _____(ft); if screen interval is not known or water table is below top of screen, then use default value of 0.3 ft.;

Min. purge volume if required: purge volume (gal) = volume of water/ft_____(gal/ft) X Water column thickness_____(ft) X # of casing volumes_____ =_____gal

Well Diameter – gal/ft	1" – 0.041 gal/ft	2" – 0.163 gal/ft	4' – 0.653 gal/ft	6' – 1.469 gal/ft

Water Quality Parameters
(Achieve stable parameters for 3 consecutive reading, 4 parameters if practical [each reading taken after pumping a minimum of 1 flow through cell volume])

Time (24-hr)	Flow Rate (~~L/min~~ gal/minute)	Purge Volume (gal)	Temp (°C) (± 3 %)	Specific Conductance (µS/cm°) (± 3%)	DO (mg/L) (± 10%)	ORP (mV) (± 10mV)	pH (± 0.1)	Turbidity (NTU) (± 10%, or <5 NTU)	DTW (ft BTOC)	Drawdown (ft) (Max____ft)

DATA QUALITY ASSESSMENT

LABORATORY DATA QUALITY ASSURANCE REVIEW

APRIL 2016 GROUNDWATER MONITORING NIKISKI, ALASKA ALASKA LNG

SLR Project Number 105.00148.16001

Prepared by Jennifer McLean
Reviewed by Jason Gray
Date: 9-16-16

This report summarizes a review of analytical data for groundwater samples collected between April 19, 2016 and April 23, 2016 at Nikiski, Alaska. Samples were collected by SLR International Corporation (SLR). SGS North America, Inc (SGS) provided analytical support to the project. SGS maintains a current Alaska Department of Environmental Conservation (ADEC) Contaminated Sites approval number (UST-005) for analytical methods of interest, as applicable. Table 1 provides a summary of work orders, sample collection, analytical methods, and analytes.

Table 1 Summary of Work Orders, Sample Receipt, and Analytical Methods

Acronyms:
°C – degrees Celsius
DRO – diesel range organics
EPA – Environmental Protection Agency
GRO – gasoline range organics
ID – identification
PAH – polycyclic aromatic hydrocarbons
RRO – residual range organics
SIM – selective ion monitoring
SDG – sample delivery group
SM – Standard Methods
SVOCs – semi-volatile organic compounds
TDS – total dissolved solids
TSS – total suspended solids
VOCs – volatile organic compounds

Laboratory final reports were provided as Level II deliverables, and included documentation of each delivery group chain-of-custody (COC) and sample receipt condition. Microsoft Access compatible electronic data deliverables (EDDs) for each report were also provided. The PDF laboratory reports and the EDDs are provided electronically as Attachment 3.

Quality Assurance Program

A quality assurance (QA) program was followed for this project that addressed project administration, sampling, quality control, and data review. SLR adhered to required and established sampling and COC protocols. The select laboratory maintains an internal quality assurance program and standard operating procedures.

The analytical data was reviewed for consistency with any project specific requirements (Method Statement, April 2016), *ADEC Technical Memorandum, Environmental Laboratory Data and Quality Assurance* (ADEC 2009a) requirements, analytical method criteria and laboratory criteria. An ADEC Laboratory Data Review Checklist was completed for each SDG, and is included as Attachment 2 to this QAR. A review for any anomalies to the project requirements for precision, accuracy, representativeness, comparability, completeness and sensitivity (PARCCS) are noted in this QAR, and any data qualifications discussed.
The data review included the following, as applicable:

- Reviewing COC records for completeness, signatures, and dates;
- Identifying any sample receipt or preservation anomalies that could impact data quality;
- Verifying that quality control (QC) blanks [e.g,. field blanks (equipment blanks; trip blanks; etc.); equipment blanks; etc.] were properly prepared, identified, and analyzed;
- Evaluating whether laboratory reporting limits met project goals; Reviewing calibration verification recoveries, to include confirming that the laboratory did not identify that any Calibration Verification (CCV) recoveries or other calibration related criteria were outside applicable acceptance limits;

- Verifying that surrogate analyses were within recovery acceptance limits;
- Verifying that Laboratory Control Samples (LCS) and Laboratory Control Sample Duplicates (LCSD), and the Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were within recovery acceptance limits;
- Evaluating the result relative percent difference (RPD) between primary and duplicate field samples, LCS/LCSD, MS/MSD, and laboratory duplicates; and
- Providing an overall assessment of laboratory data quality and qualifying sample results if necessary.

Data Qualifications

As part of the quality assurance review, qualifiers were applied to datum as determined necessary based on specified criteria, or professional judgement. In all cases, the basis for qualification and the applied data flag are discussed in this QAR. Table 2 provides a list of potential qualifiers (i.e., flags). These data flags were appended to the data as appropriate.

Table 2 Data Qualifiers

Qualifier	Definition
Q	One or more laboratory quality control criteria (for example, laboratory control sample (LCS) recovery or surrogate spike recovery) failed. Where applicable, an "H", "L", or "N" was appended to indicate positive, negative, or unknown bias, respectively.
J	Estimated: The analyte was positively identified but the result was outside the calibration range, between the limit of quantitation (LOQ) and the detection limit (DL); the quantitation was an estimate.
M	The concentration was an estimate due to a sample matrix quality control failure. Where applicable, an "H", "L", or "N" will be appended to indicate positive, negative, or unknown bias, respectively.
B	Blank contamination: The analyte was positively identified in the blank (e.g., trip blank and/or method blank) associated with the sample and the concentration reported for the sample was less than five times that of the blank (ten times for metals and common laboratory contaminants methylene chloride and acetone).
P	Sample preservation requirements were not satisfied.

A discussion of the project data quality relative to PARCCS goals and summary of any anomalies or failures requiring data qualifiers follows.

Data Validation

Data Packages

The data packages were checked for transcription errors, omissions, or other anomalies. No issues were noted with regards to the data packages, except as noted below.
For all work orders

- Nitrate and nitrite were analyzed via Method SM21 4500-NO3 for work orders 1161853, 1161876, and 1161901 and alternately analyzed via Method EPA 300.0 for work orders 1161922 and 1161924. Both methodologies are comparable and considered acceptable by ADEC. Data usability was not affected.

For work order1161876

- For total suspended solids (TSS) by Method SM21 2540D, the LCS/LCSD RPD exceeded allowable limits. This was not noted in the case narrative. Refer to the LCS/LCSD section for further discussion.

Sample Receipt

The sample receipt documentation was checked for anomalies. No issues were noted with regards to the receipt of the samples, except as noted below.

For all project work orders:

ADEC specifies a cooler receipt temperature of 4±2 degrees Celsius (°C). Temperatures above the required range have the potential to degrade the sample and introduce bias to the reported sample results. In no instances for this project were coolers received at the lab with a temperature blank measurement above the required range. Cooler temperatures below 0°C have the potential to result in freezing of the sample with the potential for damage to the integrity of the sample container but there is no concern that unfrozen samples would otherwise be impacted if received below 2°C. In cases where the cooler receipt temperatures were below 2°C, the lab inspected the sample containers and made note if there were any ice present in the samples or other indications of compromised containers. As long as the samples did not contain ice or otherwise appear damaged, samples received slightly below the 2°C temperature limit were considered acceptable and analyzed with no further qualification due to receipt temperature. Cooler temperatures and any anomalous sample conditions were documented in the data package sample receipt documentation but are not otherwise discussed in the report case narrative if there are no impacts to the sample results due to receipt condition.

A total of thirteen of the project coolers were received at the laboratory slightly below the 2°C criteria due to the inherent imprecision of achieving stable cooler temperatures within a narrow temperature range using frozen gel ice for cooling. No ice or evidence of freezing was noted in any of the samples within these coolers, and the samples were considered acceptable without any impact to the results as documented in this report.

The COCs prepared for shipments of project samples at times listed the samples from multiple coolers together without identifying which cooler the samples were located in. The laboratory did assign and record cooler ID numbers upon receipt for recording the cooler temperatures but without identifying the cooler association to the samples. Within the April 2016 sampling event, there were no instances where receipt temperatures above the required preservation range occurred which might have compromised the sample data and required association of the containers to a specific cooler. Volatile trip blank samples were always packed and shipped together in the same cooler with associated volatile field samples. For subsequent sample events, SLR will adhere to preparing a single COC specific to the contents of each cooler and identify the cooler on the COC so there is no possibility of confusion as to which cooler samples were shipped in.

For work order 1161853

- Two coolers were received at SGS with temperature blanks at 0.6 °C and 1.5°C, both slightly below the ADEC required 4±2°C. The sample receipt form did not note any evidence of freezing or sample container damage; the sample condition was considered acceptable without any impact to the results.

- The February 2016 scope of services defining the analytical methods to be used for the project did not specify that any of the samples would need to meet the TAqH reporting limits for PAH compounds. The PAH compounds are included on the SVOC by 8270D analysis however the reporting limits that are routinely achieved by SGS for the PAH compounds are above the TAqH limits. After samples had been collected and submitted to the laboratory, it was determined that for the purpose of pump test discharge permitting, samples MW27-0416 and MW87B-0416 did need to meet the TAqH detection limits for PAH analytes. An e-mail change order request was sent to the laboratory to add the 625M-SIM PAH analysis to these samples in order to meet the TAqH reporting requirements. This e-mail change order was included in the report as documentation of the analytical request. The second of two available sample containers originally intended as a back-up samples for SVOC (SW8270D) was able to be used for the PAH-SIM analysis by EPA 625M. All analyses were performed by appropriate methods as requested by SLR. This, however, resulted in no backup sample container being available for a re-extraction of SVOC by SW8270D analysis needed due to batch QC failure issues (discussed further in the LCS/LCSD section).

- For sample MW87B-0416, the sample receipt form noted that one unpreserved 500 milliliter (mL) container intended for wet chemistry methods arrived at the laboratory empty, having spilled in the cooler during shipping. A portion of the 1L container from this same sample that was originally intended for Total Suspended Solids (TSS) was able to be used to replace the spilled sample container and provide sufficient sample matrix to perform all of the original requested analysis. However, the reduced volume of sample remaining for TSS analysis necessarily elevated the LOQ for that analysis. TSS was still detected above the elevated reporting limit and is not regulated by 18 AAC 75 Table C; therefore, data usability was not affected.

- For sample MW87Z-0416, the sample receipt form noted that two of the three replicate VOA vials collected for the sample were damaged during the receiving process at the laboratory. The one remaining undamaged fraction of this sample provided sufficient sample volume to perform the requested analyses. Data were not impacted.

For work order 1161876

- Three coolers were received at SGS with temperature blanks at 0.4°C, 0.0°C, and -0.2°C, all below the ADEC required 4±2°C. The sample receipt form did not note any evidence of freezing or sample container damage, sample condition was considered acceptable without any impact to the results.

- For sample MW50Z-0416, TDS, alkalinity, turbidity, and pH were requested on the COC because it was thought that an additional blind duplicate sample would be needed to replace the spilled blind duplicate sample MW87Z-0416 from work order 1161853. The laboratory successfully obtained results for MW87Z-0416 therefor the additional blind duplicate MW50Z-0416 was not needed and cancelled by SLR as documented via email.

For work orders 1161853 and 1161876

- Analysis of a GRO trip blank sample was not requested on the COC. Trip blank sample sets were included in the cooler with all samples and requested for 8260B VOC but not requested for GRO by AK 101. A request to add GRO analysis of the trip blank sets was added via e-mail and trip blank samples analyzed appropriately for all requested volatile analyses, data were not impacted. For subsequent work orders, the VOC and GRO trip blanks were included as separate samples on the COC.

- For all samples of work orders 1161853 and 1161876, due to a preparation oversite a request for hardness calculation (derived from the dissolved metals results) was initially absent from the COC template list of requested analysis utilized for these two work orders. The request to report this calculated result was subsequently made by SLR via email. Data was not impacted, the hardness was still able to be calculated and reported from the dissolved metals analysis results, no separate sample collection or analysis for hardness is required. The COC template used for subsequent work orders was revised to include the hardness calculation request for all dissolved metals samples.

For work order 1161901

- Three coolers were received at SGS with temperature blanks at 0.9°C, 1.0°C, and 0.5°C, all slightly below the ADEC required 4±2°C. The sample receipt form did not note any evidence of freezing or sample container damage, sample condition was considered acceptable without any impact to the results.

For work order 1161922

- Three coolers were received at SGS with temperature blanks at 0.7°C, 0.7°C, and 0.1°C, all below the ADEC required 4±2°C. The sample receipt form did not note any evidence of freezing or sample container damage; sample condition was considered acceptable without any impact to the results.

- The laboratory sample receipt discovered that three unlabeled water filled VOA vials were included in the cooler delivery. Containers for all of the samples listed on the COC were received properly labeled, present and accounted for. The laboratory notified SLR and after discussion with the field samplers it was determined that the unlabeled vials were likely mistakenly collected as excess duplicate sample fractions for a MS/MSD sample preparation but were not needed. SLR directed the laboratory to dispose of the unlabeled vials and discussed the incident with the field sampling crew to avoid repeat of such errors. All of the samples that were analyzed were from properly labeled containers and associated data were not considered impacted.

For work order 1161924

- One of two coolers was received at SGS with a temperature blank at 0.5°C, slightly below the ADEC required 4±2°C. The sample receipt form did not note any evidence of freezing or sample container damage; sample condition was considered acceptable without any impact to the results

- For sample MW62A-0416, two containers for PAH SIM by EPA 625M were collected and included in the coolers received at the laboratory. This analysis was not requested on the COC. It was later determined by SLR and requested via email to the laboratory that the containers not be analyzed for this method, and be disposed of by the laboratory. Data were not impacted.

Holding Times and Preservation
Samples were appropriately preserved and were submitted to SGS. Field pH analysis was performed, and should be considered the primary data for pH. The laboratory also performed a pH analysis within three days of sample collection as a potential QA check. All results are considered to be within an acceptable hold time for all, except as noted below. No issues were noted in regard to sample preservation.

For work order 1161853

- For SVOC by SW8270D, due to low benzoic acid and 4-nitrophenol recoveries in the LCS/LCSD, sample MW87Z-0416 was re-extracted past hold time and re-analyzed. In the analysis of the re-extract, the LCS/LCSD recovered within acceptable limits. Both the initial and re-extracted analysis had results of non-detect for this analyte. Since the re-extraction was performed past the method allowed hold time, the initial analysis was reported with a data qualifier of “QL” to indicate potential low bias. Results confirmed, therefore, the impact is considered minimal. Also, the non-detect LOD of 0.0000261 mg/L is well below the project limit of 150 mg/L for benzoic acid and unregulated for 4-nitrophenol, defined by 18 AAC 75, Table C. Data is usable as qualified.

For work order 1161876

- For EPA Method 300.0, for sample MW82B-0416 chloride, fluoride and sulfate were analyzed 13 days past the 28 day method allowed hold time. Upon arrival at the laboratory this sample was mistakenly not logged in for this analysis. The error was first noticed on Friday May 27, 2016. The sample was analyzed on May 31, 2016. The data were qualified with a “QL”, and should be considered potentially biased low. Because no 18 AAC 75, Table C limits exist for these analytes, and the data still indicates approximate values; data is considered usable as qualified.

Laboratory Method Blanks
Laboratory method blanks were analyzed at the appropriate frequencies. Analytes were not detected in any method blanks at or above the Limit of Detection (LOD), except as noted in Table 3. Associated results that were less than, or equal to, five times the blank detection results were considered affected, and were qualified as shown in Table 3. Results were considered unaffected and not qualified or shown on Table 3, when associated sample results were greater than five times the blank detection or non-detect.

In all cases, affected results were well below applicable project cleanup levels. Data usability was not affected.

Table 3 Method Blank and Trip Blank Detections

1 – The affected sample result shown is dissolved metals.
2 – The affected sample result shown is total metals.
3 – Turbidity results were reported in NTU.

Trip Blanks

Trip blanks were analyzed at appropriate frequencies for VOCs and low level mercury. Trip blank samples were included in each cooler containing volatile samples. Analytes were not detected in the trip blank except for low levels of mercury as noted in Table 3 above. Affected associated sample mercury data were qualified as shown in the table.

Equipment Blanks

Equipment Blanks were analyzed at appropriate frequencies for total and dissolved metals by EPA Method 200.8. Equipment blank detections are presented in Table 4 below. Equipment blank detections for total manganese and total and dissolved aluminum were associated with method blank detections. All associated project sample detections were well below the applicable regulatory limits; therefore, the impact on usability of the associated sample data was considered negligible. Data were not qualified based on equipment blank detections.

Table 4 Equipment Blank Detections

Compound in milligrams per Liter (mg/L)	Screening Criteria		Sample Identification[3]			
			Filter Blank (Dissolved Metals)		Sample Tube Blank (Total Metals)

Reporting Limits

For non-detect results, limits of detection (LODs) were compared to applicable cleanup levels for the site. For groundwater samples, LODs were compared to 18 AAC 75.345, Table C,

groundwater cleanup levels (ADEC, May 8, 2016). All results of non-detected analytes had LODs at or below the applicable cleanup levels, except for those analytes noted in table 5 which shows those non-detected analytes with LODs which were above the applicable groundwater cleanup screening limits. All affected analytes were either VOCs by SW8260B or SVOCs by SW8270D. For all analytes presented in Table 5, typical laboratory technological methodology limitations resulted the LOD which did not meet project goals.

For subsequent sampling events, the laboratory and analytical method utilized for these two analyses will be changed and selected on the basis of lower available LODs in order to reduce the number of compounds which do not meet the regulatory screening limits.

Table 5 - LOD for Undetected Sample Results Exceeding Cleanup Limits

Analytical Method	Compound in milligrams per Liter	Screening Criteria	Lowest LOD From Project Field Samples [2] (mg/L)	LOD / Screening Level Ratio [3]
		ADEC Table C Groundwater Cleanup Level[1] (mg/L)		
8260B	1,2,3-Trichloropropane	0.00012	0.0005	4.2
	1,2-Dibromoethane	0.00005	0.0005	10.0
8270D	2,4-Dinitrotoluene	0.0013	0.00505	3.9
	2,6-Dinitrotoluene	0.0013	0.00505	3.9
	3,3-Dichlorobenzidine	0.0019	0.00505	2.7
	Benzo(a)Anthracene	0.0012	0.00505	4.2
	Benzo[a]pyrene	0.0002	0.00505	25.3
	Benzo[b]Fluoranthene	0.0012	0.00505	4.2
	Bis(2-Chloroethyl)ether	0.00077	0.00505	6.6
	Dibenzo[a,h]anthracene	0.00012	0.00505	42.1
	Hexachlorobenzene	0.001	0.00505	5.1
	Indeno[1,2,3-c,d] pyrene	0.0012	0.00505	4.2
	N-Nitrosodimethylamine	0.000017	0.00515	302.9
	N-Nitroso-di-n-propylamine	0.00012	0.00515	42.9
	Pentachlorophenol	0.001	0.0257	25.7

1 - This screening level corresponds to ADEC groundwater cleanup levels of 18 AAC 75.345 Table C (May 2016).
2 - Lowest Available LOD from project field samples show, some samples had slighty higher LOD due to decreased volume of sample analyzed.
3 - Ratio of the LOD to the screening limits, higher ratio indicates that the analyte LOD was further above the screening limit.

Continuous Calibration Verifications (CCVs)

CCVs were analyzed at the appropriate frequencies. CCV data was included only in the EDDs, not in the case narratives. All CCV recoveries were within acceptable limits, as reviewed in the EDDs, except as noted in the Table 6 below.

Data were qualified as shown in the Table 5. In all cases, LCS and MS/MSD recoveries and RPDs were within acceptable limits. Because all other QC was within acceptable limits, data is considered minimally impacted. Also, neither fluoride nor silicon is regulated by 18 AAC 75, Table C. All data is usable as qualified.

Table 6 CCV Failures and Affected Data

Work Order	Sample ID	Batch	Method	Analyte	Recovery (%)	LCL (%)	UCL (%)	Flag
	CCV [1] 1320984	WIC5531	EPA 300.0	Fluoride	113	90	110	NA
					Result (mg/L)

	MW50B-0416				16.1			QH
	MW82A-0416				16.8			QH
	MW82B-0416				14.5			QH
1161924	MW62A-0416				14.9			QH

1 - Three of four CCVs were within acceptable limits. Only the CCV shown exceeded limits.
2 - Two of three CCVs were within acceptable limits. Only the CCV shown exceeded limits.
LCL – lower control limit
UCL – upper control limit

Internal Standards

No internal standards were noted in the case narratives as being outside of acceptance limits. Internal standard performance was not otherwise presented in the report or in the electronic data deliverable. Internal standards criteria were considered met.

Surrogate Recovery Results

Surrogate analysis was performed at the required frequencies. All surrogate recoveries were within analytical method and SGS percent recovery acceptance limits.

Laboratory Control Samples and Laboratory Control Duplicate Samples

LCS and LCSDs were analyzed at the appropriate frequencies. All LCS and LCSD recoveries and RPDs were within acceptable limits except as presented in Table 7. Data were qualified as presented in the table. Results of non-detected analytes were not qualified based on RPD exceedances, as it was considered inappropriate to qualify non-detect values as estimated with unknown bias. All affected results were well below applicable cleanup limits (18 AAC 75, Table C). Data usability was not affected.

For work order 1161853

- For SVOC by SW8270D, for benzoic acid and 4-nitrophenol for samples MW27-0416 and MW87B-0416 (noted in the table below) a re-extraction, due to LCS/LCSD exceedance, was not possible. Refer to the Sample Receipt section for further discussion. Sample MW87Z-0416 was re-extracted past hold time and re-analyzed. Refer to the Hold Times and Sample Receipt sections for further discussion.

For work orders 1161876, 1161901, and 1161922

- For TSS by Method SM21 2540D, the LCS/LCSD RPD exceeded allowable limits. Also, one of three laboratory duplicates associated with this batch had an RPD exceeding allowable limits. Because the LCS and LCSD recoveries were within acceptable limits, and two of three duplicates had RPDs within acceptable limits, establishing precision, batch data were not qualified. Only the parent sample of the laboratory duplicate exceeding RPD limits was recommended for qualification. Refer to the Duplicates section for further discussion. All data was usable as qualified.

Table 7 - LCS/LCSD Recovery and Precision Qualifications

1 - Refer to the Duplicate section for flagging discussion.
2 –Recovery or RPD limits are presented only when recoveries or RPDs exceeded allowable limits.

Matrix Spike and Matrix Spike Duplicate Samples

LCS/LCSD and MS/MSD pairs were analyzed at the appropriate frequencies. All MS/MSD percent recoveries for samples analyzed at dilutions of five-fold or less were within acceptable limits, except as listed in Table 8. All MS/MSD RPDs for samples analyzed at dilutions of five-fold or less were within acceptable limits, except as listed in Table 9.

Data were qualified as presented in the table. Data were not qualified in cases where the recovery for an analyte was high and the sample result was non-detectable. Data were not qualified based on RPD exceedances when the sample result was non-detectable, as it was considered inappropriate to qualify non-detectable values as estimated with unknown bias. Data were not qualified in cases where the spike amount was less than one-half the parent concentration as it was considered not possible to accurately determine recoveries in these instances. All affected results were well below applicable cleanup limits (18 AAC 75, Table C). Data usability was not affected.

For work order 1161922

- For Method 200.8 Low Level Metals (both total and dissolved), several analytes recovered outside acceptable recovery limits in the MS/MSD for parent sample MW74B-0416. Most affected analytes had recovery limits above upper control limits. As per the methodology, a post-digestion spike was analyzed and produced recovery within acceptance criteria, indicating that matrix interferences likely caused these exceedances. Since the post digestion spike was successful, batch data was not qualified. Only parent sample MW74B-0416 was considered affected and qualified. All impacted results were below applicable cleanup levels (18 AAC 75, Table C). All data was usable as qualified.

Table 8 MS/MSD Recovery Exceedances

Work Order	Parent Sample Lab ID (MS/MSD)	Method Analyte	Initial Conc. (mg/L)	Amount Spiked (mg/L)	Per. Rec. MS (%)	Per. Rec. MSD (%)	LCL (%)	UCL (%)	Flag

Field Duplicates

The field duplicate sample frequency is presented below in Table 10. This project satisfied the required frequency of one per 10 samples or less per matrix and analyte. Field duplicates were submitted blind to the laboratory.

During the April sample event which included sampling of both groundwater monitoring wells and potable wells, a total of three field duplicates for TSS, and two field duplicates for all other methods listed in Table 1, were collected for 15 primary samples. One field duplicate was collected for five samples for PAH SIM by EPA Method 625M. This satisfied the required frequency of one per 10 samples or less per matrix and analyte. Field duplicates were submitted blind to the laboratory.

Table 10 Field Duplicate Frequency, Identification, Methods, and Analyes

Work Order	Number of Field Duplicates	Number of Parent Samples	Parent Sample	Field Duplicate	Method	Analytes

1161924	0	1	NA	NA		
Totals	2 (3 TSS)	12 (13 TSS)				

All parent sample/field duplicate RPDs were within the ADEC required 30% for waters. Samples with both results below the LOQ were considered acceptable without qualification.

Laboratory Duplicate Samples

Laboratory duplicates were analyzed at appropriate frequencies. All duplicate RPDs were within acceptable limits, except as noted below.
For work order 1161922

- For TSS by Method SM21 2540D, one of three laboratory duplicates associated with batch STS5019 had an RPD exceeding allowable limits. Two of three duplicates had RPDs within acceptable limits, establishing batch precision; therefore, batch data were not qualified. The TSS result of 4.14 mg/L for parent sample MW74B-0416 was recommended for qualification with a, "QN", and should be considered estimated with unknown bias. TSS is not regulated by 18 AAC 75, Table C. Data usability was not affected.

Overall Assessment

Precision, Accuracy, Representativeness, Comparability, Completeness, and Sensitivity Summary

- Precision: Overall project precision goals were met, except as noted for several isolated analyte results as previously noted in the LCS/LCSD (5 analytes), MS/MSD, and Laboratory Duplicates sections (1 analyte).
- Accuracy: Overall project accuracy goals were met, except for several isolated instances as previously noted in the Hold Times, CCV, LCS/LCSD, and MS/MSD sections.
- Representativeness: Representativeness goals were met. The samples were collected from planned locations in accordance with the April 2016 Method Statement and applicable requirements and guidance documents.
- Comparability: Comparability goals were met. The same laboratory and approved methods were used for the analysis of all samples.
- Completeness: Completeness goals were met. The data were 100% complete with respect to analysis and not data was rejected.
- Sensitivity: Sensitivity goals were met, except as noted in the Method Blank, Trip Blank, Equipment Blanks, and Reporting Limits sections.

This data were considered of overall good quality and acceptable for use with the noted limitations and qualifications in this QAR. No data were rejected.

   a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?
      ☐ Yes ☐ No ☒ NA (Please explain.) Comments:

2. Chain of Custody (COC)
   a. COC information completed, signed, and dated (including released/received by)?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

   b. Correct analyses requested?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

3. Laboratory Sample Receipt Documentation
   a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)?
      ☐ Yes ☒ No ☐ NA (Please explain.) Comments:

   One of two coolers was received at SGS with a temperature blank at 0.5°C, slightly below the ADEC required 4±2°C.

b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Temperature was noted.
For sample MW62A-0416, two containers for PAH SIM by EPA 625M were collected and included in the coolers received at the laboratory. This analysis was not requested on the COC.

e. Data quality or usability affected? (Please explain.)

Comments:

Regarding temperature, the sample receipt form did not note any evidence of freezing. Data were considered not impacted.
Regarding extra PAH sample containers, it was later determined by SLR and requested via email to the laboratory that the containers not be analyzed for this method, and be disposed of by the laboratory. Data was not impacted.

4. Case Narrative

a. Present and understandable?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

b. Discrepancies, errors or QC failures identified by the lab?

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

The temperature exceedance was noted on the sample receipt form, but was not documented in the case narrative.

c. Were all corrective actions documented?

☐ Yes ☐ No ☒ NA (Please explain.) Comments:

None were taken.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

No impact.

5. Samples Results
   a. Correct analyses performed/reported as requested on COC?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

   b. All applicable holding times met?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

   c. All soils reported on a dry weight basis?
      ☐ Yes ☐ No ☒ NA (Please explain.) Comments:

      Only water samples were included in this work order.

   d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?
      ☐ Yes ☒ No ☐ NA (Please explain.) Comments:

      For April groundwater well samples, LODs were compared to 18 AAC 75.345, Table C, groundwater cleanup levels (ADEC, May 8, 2015). All results of non-detect had LODs at or below the applicable cleanup levels, except as noted in Appendix 1of the QAR.
      Appendix 1 shows non-detected resultst with LODs and DLs not meeting project limits. All affected analytes were either VOCs by SW8260 or SVOCs by SW8270D.

   e. Data quality or usability affected?
      Comments:

      Regarding detection limits, for all analytes presented in the table, typical methodology limitations caused the LOD and DL to not meet project goals. Data quality was not impacted; however, it is not possible to determine with certainty whether the analytes were present in the affected samples over the cleanup levels.

6. QC Samples
   a. Method Blank
      i. One method blank reported per matrix, analysis and 20 samples?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

      ii. All method blank results less than PQL?
      ☐ Yes ☒ No ☐ NA (Please explain.) Comments:

      Analytes were not detected in any method blanks at or above the Limit of Detection (LOD), except as noted in Table 3 of the QAR.

iii. If above PQL, what samples are affected?

Comments:

Associated results that were less than or equal to five times the blank detection were considered affected, and were recommended for qualification. Results were considered unaffected, and were not presented in Table 3, when associated sample results were greater than five times the blank detection or non-detect.

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Data were qualified as noted in Table 3 of the QAR.

v. Data quality or usability affected? (Please explain.)

Comments:

All affected results were well below applicable project cleanup levels. Data usability was not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

An LCS and an MS/MSD were analyzed with each batch.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

Table 5 of the QAR presents CCV recovery exceedances and associated data. Table 7 of the QAR presents MS/MSD recovery exceedances and associated data.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

Table 6 of the QAR presents LCS/LCSD RPD exceedances and associated data.

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Affected data were presented in Tables 5, 6, and 7of the QAR.

Comments:

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Data were qualified as indicated in Tables 5, 6, and 7 of the QAR.

vii. Data quality or usability affected? (Use comment box to explain.)

All affected results were well below applicable cleanup limits (18 AAC 75, Table C). Data usability was not affected.

c. Surrogates – Organics Only

i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?
☐ Yes ☐ No ☒ NA (Please explain.) Comments:

iv. Data quality or usability affected? (Use the comment box to explain.)
Comments:

No impact.

d. Trip blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): <u>Water and Soil</u>

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

It was indicated on the sample receipt form.

iii. All results less than PQL?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Analytes were not detected in any method blanks at or above the Limit of Detection (LOD), except as noted in Table 3 of the QAR.

iv. If above PQL, what samples are affected?

Comments:

Associated results that were less than or equal to five times the blank detection were considered affected, and were recommended for qualification. Results were considered unaffected, and were not presented in Table 3, when associated sample results were greater than five times the blank detection or non-detect.

v. Data quality or usability affected? (Please explain.)

Comments:

Data were qualified as noted in Table 3 of the QAR. All affected results were well below applicable project cleanup levels. Data usability was not affected

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

During the April sample event which included sampling of both groundwater monitoring wells and potable wells, a total of three field duplicates for TSS, and two field duplicates for all other methods listed in Table 1, were collected for 15 primary samples. One field duplicate was collected for five samples for PAH SIM by EPA Method 625M. This satisfied the required frequency of one per 10 samples or less per matrix and analyte.

ii. Submitted blind to lab?

Field duplicates for this project are presented in Table 9 of the QAR.

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

iii. Precision – All relative percent differences (RPD) less than specified DQOs? (Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1-R_2)}{((R_1+R_2)/2)} \times 100$$

Where R_1 = Sample Concentration
R_2 = Field Duplicate Concentration

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

No impact.

f. Decontamination or Equipment Blank (If not used explain why).

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

i. All results less than PQL?

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

There were detections above the LOQ in the filter blank (for dissolved metals): for aluminum, cadmium, and copper.
There were detections above the LOQ in the sample tube equipment blank (for total metals): for aluminum and manganese.

ii. If above PQL, what samples are affected?

Comments:

All samples associated with this April 2016 Kenai Wells Groundwater and Potable Water project were affected.

iii. Data quality or usability affected? (Please explain.)

Comments:

Total and dissolved aluminum and total manganese were also present in the associated method blank.
All affected sample results were below applicable project cleanup levels. Data were not qualified based on equipment blank detections. Data usability was not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)
   a. Defined and appropriate?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

LABORATORY DATA QUALITY ASSURANCE REVIEW

APRIL 2016 POTABLE WELL MONITORING NIKISKI, ALASKA ALASKA LNG

SLR Project Number 105.00148.16001, Task 1

Prepared by Jennifer McLean
Reviewed by Jason Gray
Date: 9-16-16

This report summarizes a review of analytical data for potable well samples collected on April 23, 2016 at Nikiski, Alaska. Samples were collected by SLR International Corporation (SLR). SGS North America, Inc (SGS) provided analytical support to the project. SGS maintains a current Alaska Department of Environmental Conservation (ADEC) Contaminated Sites approval number (UST-005) for analytical methods of interest, as applicable. Table 1 provides a summary of the work order, sample receipt, analytical methods and analytes.

Table 1 Summary of Work Orders, Sample Receipt, and Analytical Methods

SDG	Date Received by Lab	Temp Blank	Matrix	Analytical Methods	Analytes
1161923	4/24/16	Ambient[1]	Ground Water	200.8 Low Level	27 Metals
				AK101	GRO
				AK102	DRO
				AK103	RRO
				EPA 300.0	Chloride, Fluoride Nitrate/Nitrite Sulfate
		0.5 ºC			
				EPA 625M	PAH SIM
				SM21 2130B	Turbidity
		1.3 ºC		SM21 2320B	Alkalinity
				SM2340B	Hardness
				SM2340C	TDS
				SM2340D	TSS
		1.5 ºC		SM21 4500-H B	pH
				SW8260B	VOCs
				SW8270D	SVOCs
				EPA 1631 E	Mercury

1 – This cooler contained only samples for low level mercury by EPA Method 1631. This method has no temperature preservation requirement.

Acronyms:
°C – degrees Celsius
DRO – diesel range organics
EPA – Environmental Protection Agency
GRO – gasoline range organics
ID – identification
PAH – polycyclic aromatic hydrocarbons
RRO – residual range organics
SIM – selective ion monitoring
SDG – sample delivery group
SM – Standard Methods
SVOCs – semi-volatile organic compounds
TDS – total dissolved solids
TSS – total suspended solids
VOCs – volatile organic compounds

The laboratory final report was presented as a Level II deliverable, and included documentation of the delivery group chain-of-custody (COC) and sample receipt condition. A Microsoft Access compatible electronic data deliverable (EDD) was also provided. The PDF laboratory report is provided electronically as Attachment 3.

Quality Assurance Program

A quality assurance (QA) program was followed for this project that addressed project administration, sampling, quality control, and data review. SLR adhered to required and established sampling and COC protocols. The select laboratory maintains an internal quality assurance program and standard operating procedures.

The analytical data was reviewed for consistency with any project specific requirements (Method Statement, April 2016), *ADEC Technical Memorandum, Environmental Laboratory Data and Quality Assurance* (ADEC 2009a) requirements, analytical method criteria and laboratory criteria. An ADEC Laboratory Data Review Checklist was completed for the SDG, and is included as Attachment 2 to this QAR. A review for any anomalies to the project requirements for precision, accuracy, representativeness, comparability, completeness and sensitivity (PARCCS) are noted in this QAR, and any data qualifications discussed.

The data review included the following, as applicable:

- Reviewing COC records for completeness, signatures, and dates;
- Identifying any sample receipt or preservation anomalies that could impact data quality;
- Verifying that quality control (QC) blanks [e.g, field blanks (equipment blanks; trip blanks; etc.); equipment blanks; etc.] were properly prepared, identified, and analyzed;
- Evaluating whether laboratory reporting limits met project goals; Reviewing calibration verification recoveries, to include confirming that the laboratory did not identify that any Calibration Verification (CCV) recoveries or other calibration related criteria were outside applicable acceptance limits;
- Verifying that surrogate analyses were within recovery acceptance limits;

- Verifying that Laboratory Control Samples (LCS) and Laboratory Control Sample Duplicates (LCSD), and the Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were within recovery acceptance limits;

- Evaluating the result relative percent difference (RPD) between primary and duplicate field samples, LCS/LCSD, MS/MSD, and laboratory duplicates; and

- Providing an overall assessment of laboratory data quality and qualifying sample results if necessary.

Data Qualifications

As part of the quality assurance review, qualifiers were applied to datum as determined necessary based on specified criteria, or professional judgement. In all cases, the basis for qualification and the applied data flag are discussed in this QAR. Table 2 provides a list of potential qualifiers (i.e., flags). These data flags were appended to the data as appropriate.

Table 2 Data Qualifiers

Qualifier	Definition
Q	One or more laboratory quality control criteria (for example, laboratory control sample (LCS) recovery or surrogate spike recovery) failed. Where applicable, an "H", "L", or "N" was appended to indicate positive, negative, or unknown bias, respectively.
J	Estimated: The analyte was positively identified but the result was outside the calibration range, between the limit of quantitation (LOQ) and the detection limit (DL); the quantitation was an estimate.
M	The concentration was an estimate due to a sample matrix quality control failure. Where applicable, an "H", "L", or "N" will be appended to indicate positive, negative, or unknown bias, respectively.
B	Blank contamination: The analyte was positively identified in the blank (e.g., trip blank and/or method blank) associated with the sample and the concentration reported for the sample was less than five times that of the blank (ten times for metals and common laboratory contaminants methylene chloride and acetone).
P	Sample preservation requirements were not satisfied.

A discussion of the project data quality relative to PARCCS goals and summary of any anomalies or failures requiring data qualifiers follows.

Data Validation

Data Packages

The data package was checked for transcription errors, omissions, or other anomalies. No issues were noted with regards to the data package.

Sample Receipt

The sample receipt documentation was checked for anomalies. No issues were noted with regards to the receipt of the samples, except as noted below.

- ADEC specifies a cooler receipt temperature of 4±2 degrees Celsius (°C) for temperature sensitive analytes. Temperatures above the required range have the potential to degrade the sample and introduce and bias to the reported sample results. In no instances for this project were coolers received at the lab with a temperature blank measurement above the required range. Cooler temperatures below 0°C have the potential to result in freezing of the sample with the potential for damage to the integrity of the sample container but there is no concern that unfrozen samples would otherwise be impacted if received below 2°C. Four coolers were received at SGS on April 24, 2016. Cooler one was received at ambient temperature, as it included only non-temperature sensitive samples for mercury by EPA 1631. Coolers 2, 3, and 4 were received with temperature blanks at 0.5°C, 1.3°C, and 1.5ºC, all slightly below the ADEC required 4±2°C. In cases where the cooler receipt temperatures were below 2°C, the lab inspected the sample containers and made note if there were any ice present in the samples or other indications of compromised containers. As long as the samples did not contain ice or otherwise appear damaged, samples received slightly below the 2°C temperature limit were considered acceptable and analyzed with no further qualification due to receipt temperature. Cooler temperatures and any anomalous sample conditions were documented in the data package sample receipt documentation but are not otherwise discussed in the report case narrative if there are no impacts to the sample results due to receipt condition.

- The COC prepared for the project shipment listed the samples from multiple coolers together on a single without uniquely identifying which cooler the samples were located in. The laboratory did assign and record cooler ID numbers upon receipt for recording the cooler temperatures but without identifying the cooler association to the samples. Within the April potable water sampling event, there were no instances where receipt temperatures above the required preservation range occurred which might have compromised the sample data and required association of the containers to a specific cooler. Volatile trip blank samples were always packed and shipped together in the same cooler with associated volatile field samples. For subsequent sample events, SLR will adhere to preparing a single COC specific to the contents of each cooler and identify the cooler on the COC so there is no possibility of confusion as to which cooler samples were shipped in.

- For sample Decker-0416, SVOC by SW8270 containers which were incorrectly labeled as having HCl preservative, the method requires unpreserved sample for analysis. Upon check-in at the laboratory, it was confirmed that these sample containers were correctly unpreserved. Data was not impacted.

Holding Times and Preservation

Samples were appropriately preserved and were submitted to SGS. Field pH analysis was performed, and should be considered the primary data for pH. The laboratory also performed a pH analysis within three days of sample collection as a potential QA check. All results are considered to be within an acceptable hold time for all analysis. No issues were noted in regard to sample preservation.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the appropriate frequencies. Analytes were not detected in any method blanks at or above the Limit of Detection (LOD), except as noted in Table 3. Affected results that were less than, or equal to, five times an associated method blank result were qualified with the flags indicated below. Results were considered unaffected, and were not presented in Table 3, when associated sample results were greater than five times the blank detection or non-detect. Qualified data should be considered estimated, potentially biased high. All affected results were non-regulated analytes. Data usability was not affected.

Table 3 Method Blank Detections

Sample ID	Lab ID	Method	Analyte	Result (mg/L)	Flag	Project Limits (mg/L)
MB	1324624	200.8 Low Level	Barium	0.000942	=	2
MB	1321585	EPA 300.0	Nitrate-N	0.058	J	Not Regulated
PQW1-0416	1161923002			0.067 A	J, B	
TP1-0416	1161923001			0.07 A	J, B	
MB	1321424	SM21 2130B	Turbidity[1]	0.1	J	Not Regulated
Decker-0416	1161923003			0.4	B	

1 – Turbidity units are reported in NTU.

Trip Blanks

Trip blanks were analyzed at appropriate frequencies for VOCs and low level mercury analysis. A trip blank was included in each cooler containing volatile samples. No analytes were detected in the trip blank at or above the LOD.

Equipment Blanks

Equipment Blanks were analyzed at appropriate frequencies for total and dissolved metals by EPA Method 200.8. Equipment Blank Detections are presented in Table 4 below. All associated sample detections for impacted analytes were well below the applicable project cleanup limits; therefore, the impact was considered negligible. Data were not qualified based on equipment blank detections.

Table 4 Equipment Blank Detections

Compound in milligrams per Liter (mg/L)	Screening Criteria		Sample Identification[3]			
	Permit AKG003000 Table 3 [1]	ADEC Table C Groundwater Cleanup Level[2]	Filter Blank (Dissolved Metals) EBF-Lot #L1456 19-Apr-16 1161853002		Sample Tube Blank (Total Metals) EBT-0416 19-Apr-16 1161853001

Zinc	2	5	0.00111	J	0.000622	J

NR – not reported

Reporting Limits

For non-detect results, limits of detection (LODs) were compared to applicable cleanup levels for the site. For groundwater samples, LODs were compared to 18 AAC 75.345, Table C, groundwater cleanup levels (ADEC, May 8, 2016) and ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test. All results of non-detected analytes had LODs at or below the applicable cleanup levels, except for those analytes noted in table 5 which shows those non-detected analytes with LODs which were above the applicable groundwater cleanup screening limits. All affected analytes were either VOCs by SW8260B or SVOCs by SW8270D. For all analytes presented in the Table 5, typical laboratory technological methodology limitations resulted the LOD which did not meet project goals. For this reason, the PAH compounds were additionally analyzed for all of the samples of this project via a separate E625M-SIM analysis which did achieve LODs below the regulatory screening criteria for PAH analytes which were not met by SW8270D.

For subsequent sampling events, the laboratory and analytical method utilized for VOCs by SW8260B and SVOCs by SW8270D will be changed and selected on the basis of lower available LODs in order to reduce the number of compounds which do not meet the regulatory screening limits.

Table 5 - LOD for Undetected Sample Results Exceeding Cleanup Limits

Analytical Method	Compound in milligrams per Liter	Screening Criteria: ADEC Table C Groundwater Cleanup Level[1] (mg/L)	Lowest LOD From Project Field Samples [2] (mg/L)	LOD / Screening Level Ratio [3]
8260B	1,2,3-Trichloropropane	0.00012	0.0005	4.2
	1,2-Dibromoethane	0.00005	0.0005	10.0
8270D	2,4-Dinitrotoluene	0.0013	0.0051	3.9
	2,6-Dinitrotoluene	0.0013	0.0051	3.9
	3,3-Dichlorobenzidine	0.0019	0.0051	2.7
	Benzo(a)Anthracene [4]	0.0012	0.0051	4.2
	Benzo[a]pyrene [4]	0.0002	0.0051	25.3
	Benzo[b]Fluoranthene [4]	0.0012	0.0051	4.2
	Bis(2-Chloroethyl)ether	0.00077	0.0051	6.6
	Dibenzo[a,h]anthracene [4]	0.00012	0.0051	42.1
	Hexachlorobenzene	0.001	0.0051	5.1
	Indeno[1,2,3-c,d] pyrene [4]	0.0012	0.0051	4.2
	N-Nitrosodimethylamine	0.000017	0.0051	302.9
	N-Nitroso-di-n-propylamine	0.00012	0.0051	42.9
	Pentachlorophenol	0.001	0.0257	25.7

1 - This screening level corresponds to ADEC groundwater cleanup levels of 18 AAC 75.345 Table C (May 2016).
2 - Lowest Available LOD from project field samples show, some samples had slighty higher LOD due to decreased volume of sample analyzed.
3 - Ratio of the LOD to the screening limits, higher ratio indicates that the analyte LOD was further above the screening limit.
4- PAH analyte additionally analyzed with LOD < screening limit via method 625M-SIM.

Continuous Calibration Verifications (CCVs)

CCVs were analyzed at the appropriate frequencies. CCV data was included only in the EDD, not in the case narrative. All CCV recoveries were within acceptable limits, as reviewed in the EDD, except as noted in the table below.

Data were qualified as shown in the Table 6 below. For data shown in the table, all other QC were within acceptable limits; therefore, data is considered minimally impacted. Also, silicon is not regulated by 18 AAC 75, Table C. All data is usable as qualified.

Table 6 CCV Failures and Affected Data

Lab ID	Batch	Method	Analyte	Recovery (%)	LCL (%)	UCL (%)	Flag
CCV [1] 1324864	MMS9354	200.8 Low Level	Dissolved Silicon	139	85	115	NA
				Result (mg/L)			
TP1-0416				1.54			QH
PQW1-0416				0.575			QH
Decker-0416				14.5			QH

1 - Two of three CCVs were within acceptable limits. Only the CCV shown exceeded limits.
LCL – lower control limit
UCL – upper control limit

Internal Standards

No internal standards were noted in the case narratives as being outside of acceptance limits. Internal standard performance was not otherwise presented in the report or in the electronic data deliverable. Internal standards criteria were considered met.

Surrogate Recovery Results

Surrogate analysis was performed at the required frequencies. All surrogate recoveries were within analytical method and SGS percent recovery acceptance limits.

Laboratory Control Samples and Laboratory Control Duplicate Samples

LCS and LCSDs were analyzed at the appropriate frequencies. All LCS and LCSD recoveries and RPDs were within acceptable limits except as presented in Table 7. Data were qualified as presented in the table. Results of non-detected analytes were not qualified based on RPD exceedances, as it was considered inappropriate to qualify non-detect values as estimated with unknown bias. All affected results were well below applicable cleanup limits (18 AAC 75, Table C). Data usability was not affected.

- For TSS by Method SM21 2540D, the LCS/LCSD RPD exceeded allowable limits. Also, one of three laboratory duplicates associated with this batch had an RPD exceeding allowable limits. Because the LCS and LCSD recoveries were within acceptable limits, and two of three duplicates had RPDs within acceptable limits, establishing precision, batch data were not qualified. Only the parent sample of the laboratory duplicate exceeding RPD limits (not from this work order) were qualified. All data associated with this work was usable without qualification.

Table 7 LCS/LCSD Precision Qualifications

Sample ID	Batch	Method	Analyte	RPD (%)	Flag
LCS/LCSD	XXX35213	SW8270D	aniline	20.9 [2]	NA
				Result (mg/L)	
TP1-0416				ND [0.0255]	NA
PQW1-0416				ND [0.0255]	
Decker-0416				ND [0.0257]	
LCS/LCSD	STS5019 [3]	SM21 2540D	TSS	7.4 [1]	NA
DUP 1321135				1.3 [1]	NA
DUP 1321136				0.6 [1]	NA
DUP of 1161922003				13.0 [1]	NA [3]
				Result (mg/L)	
TP1-0416				8.1	NA
PQW1-0416				15	
Decker-0416				ND [0.498]	

1 - Allowable RPD limit is 5%.
2 - Allowable RPD limit is 20%.
3 - Refer to the Laboratory Duplicates section for flagging discussion

Matrix Spike and Matrix Spike Duplicate Samples

LCS/LCSD and MS/MSD pairs were analyzed at the appropriate frequencies. All MS/MSD percent recoveries and RPDs for samples analyzed at dilutions of five-fold or less were within acceptable limits.

Field Duplicates

For potable wells, three primary samples were collected for the methods and analytes listed in Table 1. One field duplicate was collected for PAH SIM by EPA Method 625M only.

During the April sample event which included sampling of both groundwater monitoring wells and potable wells, a total of three field duplicates for TSS, and two field duplicates for all other methods listed in Table 1, were collected for 15 primary samples. One field duplicate was collected for five samples for PAH SIM by EPA Method 625M. This satisfied the required frequency of one per 10 samples or less per matrix and analyte. Field duplicates were submitted blind to the laboratory.

For potable wells, the following field duplicate was collected.

- Sample TP6-0416 was the duplicate of sample TP1-0416 (EPA Method 625M).

All parent sample and field duplicate results were non-detect for all analytes. Samples with both results below the LOQ were considered acceptable without qualification.

Laboratory Duplicate Samples

Laboratory duplicates were analyzed at appropriate frequencies. All duplicate RPDs were within acceptable limits, except as noted below.

- For TSS by Method SM21 2540D, one of three laboratory duplicates associated with batch STS5019 had an RPD exceeding allowable limits. Associated samples were TP1-0416, PQW1-0416, and Decker-0416. Two of three duplicates had RPDs within acceptable limits, establishing batch precision; therefore, batch data were not qualified. Only the parent sample, not from this work order was considered affected, thus qualified. All data associated with this work order was usable without qualification.

Overall Assessment

Precision, Accuracy, Representativeness, Comparability, Completeness, and Sensitivity Summary

- Precision: Overall project precision goals were met, except for several isolated analyte results as previously noted in the LCS/LCSD and Laboratory Duplicates sections.
- Accuracy: Overall project accuracy goals were met, except for several isolated instances as previously noted in the CCV section.
- Representativeness: Representativeness goals were met. The samples were collected from planned locations in accordance with the Method Statement and discussion, and applicable requirements and documents.
- Comparability: Comparability goals were met. Standard Methods noted in Table 1 were used by SGS.
- Completeness: Completeness goals were met. The data were 100% complete with no omissions or rejections with respect to analysis.
- Sensitivity: Sensitivity goals were met, except as noted in the Method Blank, Equipment Blank, and Reporting Limits sections.

This data were considered of good quality and acceptable for use with the qualifications noted limitations and in this QAR. No data were rejected.

ADEC Data Review Checklists

Laboratory Data Review Checklist

Completed by: Jennifer McLean

Title: Project Scientist Date: June 1, 2016

CS Report Name: April Sampling Kenai Wells Potable Water Report Date: May 23, 2016

Consultant Firm: SLR International Corporation

Laboratory Name: SGS North America, Inc. Laboratory Report Number: 1161923

ADEC File Number: NA ADEC RecKey Number: NA

1. Laboratory
   a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?
      ☐ Yes ☐ No ☒ NA (Please explain.) Comments:

2. Chain of Custody (COC)
   a. COC information completed, signed, and dated (including released/received by)?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

   b. Correct analyses requested?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

3. Laboratory Sample Receipt Documentation
   a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)?
      ☐ Yes ☒ No ☐ NA (Please explain.) Comments:

   Four coolers were received at SGS on April 24, 2016. Cooler one was received ambient temperature, as it included only non-temperature sensitive samples for mercury by EPA 1631. Coolers 2, 3, and 4 were received with temperature blanks at 0.5°C, 1.3°C, and 1.5°C, all slightly below the ADEC required 4±2°C.

b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

For sample Decker-0416, SVOC by SW8270 containers were noted as having HCl preservative. Method SW8270 requires unpreserved sample for analysis. Upon check-in at the laboratory, it was confirmed that these sample containers were correctly unpreserved.

c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Temperature was noted.

e. Data quality or usability affected? (Please explain.)
Comments:

The sample receipt form did not note any evidence of freezing. Data were considered not impacted.
Regarding preservation, since samples were correctly unpreserved, data was not impacted.

4. Case Narrative
a. Present and understandable?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

b. Discrepancies, errors or QC failures identified by the lab?
☐ Yes ☒ No ☐ NA (Please explain.) Comments:

The temperature exceedance was noted on the sample receipt form, but was not documented in the case narrative.

c. Were all corrective actions documented?
☐ Yes ☐ No ☒ NA (Please explain.) Comments:

None were taken.

d. What is the effect on data quality/usability according to the case narrative?
Comments:

No impact.

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

b. All applicable holding times met?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

c. All soils reported on a dry weight basis?

☐ Yes ☐ No ☒ NA (Please explain.) Comments:

Only water samples were included in this work order.

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

For potable well samples, LODs were compared to 18 AAC 75.345, Table C, groundwater cleanup levels (ADEC, May 8, 2015) and ADEC Alaska General Permit AKG003000 for the discharge of Aquifer Pump Test. All results of non-detect had LODs at or below the applicable cleanup levels, except as noted in Appendix 1of the QAR.
Appendix 1 shows results of nondetect with LODs and DLs not meeting project limits. All affected analytes were either VOCs by SW8260 or SVOCs by SW8270D.

e. Data quality or usability affected?

Comments:

For all analytes presented in the table, typical methodology limitations caused the LOD and DL to not meet project goals. Data quality was not impacted; however, it is not possible to determine with certainty whether the analytes were present in the affected samples over the cleanup levels.

6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. All method blank results less than PQL?

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

Barium was detected in MB 1324624 above the LOQ.
Turbidity and nitrate/nitrite were detected between the DL and LOQ.

iii. If above PQL, what samples are affected?

Comments:

Affected samples and results were noted in Table 3 of the QAR.

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Nitrate/nitrite results for samples Decker-0416, PQW1-0416, and TP1-0416 were flagged with a "B". The turbidity result for sample Decker-0416 was flagged with a "B".

v. Data quality or usability affected? (Please explain.)
Comments:

All affected results were non-regulated analytes. Data usability was not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?
☐ Yes ☒ No ☐ NA (Please explain.) Comments:

An LCS and an MS/MSD were analyzed with each batch.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)
☐ Yes ☒ No ☐ NA (Please explain.) Comments:

Silicon recovered above the acceptable upper limit in CCV 1324864.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)
☐ Yes ☒ No ☐ NA (Please explain.) Comments:

LCS/LCSD RPDs exceeded allowable limits for analine by Method SW8270D and TSS by SM21 2540D.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments:

Associated samples were TP1-0416, PQW1-0416, and Decker-0416.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

For CCV exceedances: silicon results for TP1-0416, PQW1-0416, and Decker-0416 were qualified with a "QH", and should be considered estimated with potential high bias. For LCS/LCSD RPDs, data were considered not affected. For aniline associated results were non-detect. It was considered inappropriate to qualify non-detect values as estimated with unknown bias. For TSS, two of three laboratory batch duplicates established precision.

vii. Data quality or usability affected? (Use comment box to explain.)

Silicon is not regulated by 18 AAC 75, Table C or permit AKG0030000. Aniline and TSS data were not affected. Data usability was not affected.

c. Surrogates – Organics Only

i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)
☒ Yes ☐ No ☐ NA (Please explain.) Comments:

iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?
☐ Yes ☐ No ☒ NA (Please explain.) Comments:

No failed surrogate recoveries.

iv. Data quality or usability affected? (Use the comment box to explain.)
Comments:

No impact.

d. Trip blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): Water and Soil

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

Cooler association was indicated on the sample receipt form.

iii. All results less than PQL?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

iv. If above PQL, what samples are affected?

Comments:

Not applicable.

v. Data quality or usability affected? (Please explain.)

Comments:

No impact.

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

For this work order (potable wells), three primary samples were collected for the methods and analytes listed in Table 1 of the QAR. One field duplicate was collected for PAH SIM by EPA Method 625M only.
Overall for this project, including groundwater and potable data: a total of three field duplicates for TSS, and two field duplicates for all other methods listed in Table 1, were collected for 15 primary samples. One field duplicate was collected for five samples for PAH SIM by EPA Method 625M.

ii. Submitted blind to lab?

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

Sample TP6-0416 was the duplicate of sample TP1-0416 (EPA Method 625M).

iii. Precision – All relative percent differences (RPD) less than specified DQOs? (Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1-R_2)}{((R_1+R_2)/2)} \times 100$$

Where R_1 = Sample Concentration
R_2 = Field Duplicate Concentration

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

No impact.

f. Decontamination or Equipment Blank (If not used explain why).

☒ Yes ☐ No ☐ NA (Please explain.) Comments:

The associated equipment blank was reported with work order 1161853.

i. All results less than PQL?

☐ Yes ☒ No ☐ NA (Please explain.) Comments:

There were detections above the LOQ in the filter blank for aluminum, cadmium, and copper. There were detections above the LOQ in the sample tube equipment blank for aluminum and manganese.

ii. If above PQL, what samples are affected?

Comments:

All samples associated with this April 2016 Kenai Wells Groundwater and Potable Water project were affected.

iii. Data quality or usability affected? (Please explain.)

Comments:

All affected sample results were below applicable project cleanup levels. Data was not qualified based on equipment blank detections. Data usability was not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)
   a. Defined and appropriate?
      ☒ Yes ☐ No ☐ NA (Please explain.) Comments:

APPENDIX D
ANALYTICAL LABORATORY REPORTS

MONITORING WELLS

Laboratory Report of Analysis

To: SLR Alaska-Anchorage
2700 Gambell St Suite 200
Anchorage, AK 99503
(907)222-1112

Report Number: **1161853**

Client Project: **105.00148.16001 Kenai Wells**

Dear Jason Gray,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Justin at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Justin Nelson

Case Narrative

SGS Client: **SLR Alaska-Anchorage**
SGS Project: **1161853**
Project Name/Site: **105.00148.16001 Kenai Wells**
Project Contact: **Jason Gray**

Refer to sample receipt form for information on sample condition.

MW87B-0416 (1161853003) PS

8270D - LCS/LCSD recovery for benzoic acid (0%) and 4-nitrophenol (40%) does not meet QC criteria. There is no remaining volume for re-extraction of the sample.

MW87Z-0416 (1161853004) PS

8270D - Sample was re-extracted outside of hold time with passing LCS/LCSD recovery for benzoic acid and 4-nitrophenol.

MW27-0416 (1161853005) PS

8270D - LCS/LCSD recovery for benzoic acid (0%) and 4-nitrophenol (40%) does not meet QC criteria. There is no remaining volume for re-extraction of the sample.

LCS for HBN 1732068 [XXX/35194 (1320691) LCS

8270D - LCS recovery for benzoic acid (0%) and 4-nitrophenol (40%) does not meet QC criteria.

LCSD for HBN 1732068 [XXX/3519 (1320692) LCSD

8270D - LCSD recovery for benzoic acid (0%) and 4-nitrophenol (42%) does not meet QC criteria.

LCSD for HBN 1732500 [VXX/2874 (1321732) LCSD

8260B - LCS/LCSD RPD for 2-butanone (MEK) (21.5%) does not meet QC criteria. This analyte was not detected above the LOQ in the associated samples.

1161731001(1320929MSD) (1320937) MSD

300.0 - Anions - MSD recovery for fluoride is outside QC criteria. Refer to LCS for accuracy requirements.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Print Date: 05/19/2016 11:59:21AM

Change Order WO #1161853

Per the message below, please add EPA 625M TAqH Analysis to the following samples. We will need to extract the samples from the secondary container that was provided for SVOC analysis.

1161853-003
1161853-005

Both of these samples were collected on 4/19, so please send a short hold message to the department. Thanks!

Subject: RE: Kenai Wells, added task quote needed

Justin- following up on our conversion,

I need to request that two samples from the first Kenai Wells cooler delivery be requested for analysis of PAH-SIM via method 625. Please use the second available 1L water container originally collected for 8270D-SVOC to perform the additional PAH-SIM analysis for the following two samples;
1161853-03 (MW87B-416) and 1161853-05 (MW27-416). These were both collected 4/19 so holding time is getting short.

There will likely be an additional 2 samples collected Saturday that will be requested for analysis of 624 & 625 TAH/TAqH, they should arrive on their own COC and will requested as such.

Thanks-

Subject: RE: Kenai Wells, added task quote needed

Coolers are here, Jason. Temperatures are good, there was one issue with the sample containers:

- The 500-mL HDPE Unpreserved for sample “MW87B-0416” was received empty. The sample was open, and has clearly spilled in the cooler. The bag containing this particular container was on top of another group of bottles, on its side; I would recommend against shipping any bottles on their side, the caps are usually fine, but if they are cross threaded even a little bit, any bump can unseat them.

- I can still perform all analyses, I will just reduce the amount used for TSS to 500-mL and take the rest of the analyses (TDS, Alkalinity, Turbidity, pH) from the TSS containter. This will raise the TSS LOQ from 0.5 mg/L to 1.0 mg/L. If this is unacceptable, you will need to resample TSS only.

Let me know if there are any questions, the COC should be coming through on Engage once login is completed.

Subject: RE: Kenai Wells, added task quote needed

I think our preference would be to have it reported via 624 & 625 in order to comply with the methods specified by DEC for TAH/TAqH.
Works for me if you can add this to the existing Kenai wells quote.

Do you have todays coolers at the lab yet? It would be helpful if you can send me the COC prior to your full login review.

Thanks-

Subject: RE: Kenai Wells, added task quote needed

Do you have a method preference? Pricing will be the same for TAH/BTEX and TAqH/PAH, so as far as the method goes, the price is the same. Do you need a separate quote from the existing Kenai Wells Quote?

To: Nelson, Justin (Anchorage)
Subject: Kenai Wells, added task quote needed

Justin-
A new task has been added to the Kenai Wells project, I need to get a pricing quote for performing analysis of 10 water samples via either methods 624 & 625 or 8260B & 8270D (only one method pair will be used).

Parameter	Method
TAH	624
TAqH	625
BTEX	8260B
PAH	8270D SIM

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Laboratory Report of Analysis

To: SLR Alaska-Anchorage
2700 Gambell St Suite 200
Anchorage, AK 99503
(907)222-1112

Report Number: **1161876**

Client Project: **105.00148.16001 Kenai Wells**

Dear Jason Gray,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Justin at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Case Narrative

SGS Client: **SLR Alaska-Anchorage**
SGS Project: **1161876**
Project Name/Site: **105.00148.16001 Kenai Wells**
Project Contact: **Jason Gray**

Refer to sample receipt form for information on sample condition.

MW82B-0416 (1161876002) PS

300.0 - Anions - Sample was analyzed outside of hold time due to a laboratory error.

MW50Z-0416 (1161876005) PS

Analysis was cancelled for this sample, per the attached change order.

LCSD for HBN 1732272 [STS/5019 (1321134) LCSD

2540D - Total Suspended Solids - LCSD is not needed for batch QC. Refer to sample duplicate RPD for precision.

LCSD for HBN 1732348 [XXX/3521 (1321253) LCSD

8270D - LCS/LCSD RPD for pyridine (42.2%) and aniline (20.9%) does not meet QC criteria. The associated sample concentrations for these analytes are less than the LOQ.

LCSD for HBN 1732500 [VXX/2874 (1321732) LCSD

8260B - LCS/LCSD RPD for 2-butanone (MEK) (21.5%) does not meet QC criteria. These analytes were not detected above the LOQ in the associated samples.

1161860001MS (1321406) MS

4500NO3-F - Nitrate/Nitrite - MS recovery for Total NO2/NO3 is outside of QC criteria. Refer to LCS for accuracy requirements.

1161731001(1320929MSD) (1320937) MSD

300.0 - Anions - MSD recovery for fluoride is outside QC criteria. Refer to LCS for accuracy requirements.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

Report of Manual Integrations

Laboratory ID	Client Sample ID	Analytical Batch	Analyte	Reason
SW8270D				
1321252	LCS for HBN 1732348 [XXX/35213	XMS9274	1-Chloronaphthalene	BLC
1321253	LCSD for HBN 1732348 [XXX/3521	XMS9274	1-Chloronaphthalene	BLC

Manual Integration Reason Code Descriptions

Code	Description
O	Original Chromatogram
M	Modified Chromatogram
SS	Skimmed surrogate
BLG	Closed baseline gap
RP	Reassign peak name
PIR	Pattern integration required
IT	Included tail
SP	Split peak
RSP	Removed split peak
FPS	Forced peak start/stop
BLC	Baseline correction
PNF	Peak not found by software

All DRO/RRO analysis are integrated per SOP.

Print Date: 06/01/2016 2:30:31PM

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Detectable Results Summary

Client Sample ID: **MW50A-0416**
Lab Sample ID: 1161876009
Dissolved Metals by ICP/MS

Parameter	Result	Units
Aluminum	1720	ug/L
Antimony	0.194	ug/L
Arsenic	18.0	ug/L
Barium	37.4	ug/L
Boron	20.7	ug/L
Calcium	28700	ug/L
Chromium	3.89	ug/L
Cobalt	0.720	ug/L
Copper	3.59	ug/L
Hardness as CaCO3	105	mg/L
Iron	1680	ug/L
Lead	1.07	ug/L
Magnesium	8230	ug/L
Manganese	129	ug/L
Molybdenum	0.898	ug/L
Nickel	3.35	ug/L
Potassium	4900	ug/L
Silicon	19300	ug/L
Sodium	7720	ug/L
Tin	0.268	ug/L
Vanadium	4.16	ug/L
Zinc	7.91	ug/L

Client Sample ID: **MW50B-0416**
Lab Sample ID: 1161876010
Dissolved Metals by ICP/MS

Parameter	Result	Units
Aluminum	2.35	ug/L
Antimony	0.0707	ug/L
Barium	23.5	ug/L
Boron	3.72J	ug/L
Calcium	13500	ug/L
Cobalt	0.804	ug/L
Copper	0.303J	ug/L
Hardness as CaCO3	55.8	mg/L
Iron	470	ug/L
Magnesium	5330	ug/L
Manganese	38.7	ug/L
Molybdenum	0.496	ug/L
Nickel	2.98	ug/L
Potassium	2150	ug/L
Silicon	16100	ug/L
Sodium	7140	ug/L
Zinc	0.748J	ug/L

From: Jason Gray [jgray@slrconsulting.com]
Sent: Thursday, April 21, 2016 3:14 PM
To: Nelson, Justin (Anchorage)
Subject: RE: Kenai Wells, added task quote needed

Justin-

We need to cancel the analysis of sample fraction 1161876-05 (MW50Z-0416) for TDS, Alkainity, Turbidity and pH. I presume this is a 500ml container, right?

I also noticed that there is not a separate trip blank included & requested for GRO analysis on today or yesterdays COC. Would it be possible to utilize one of the three 8260B VOA vial trip blanks and analyze it for GRO? Is there any difference in how the VOC and GRO trip blanks are prepared that prevent a vial being used for either analysis?

Thanks-

Airbill number for todays shipment of 3 coolers is 8087023251 and they listed SGS as the consignee so pickup should be easier.

The field guys didn't get my new-improved COC form printed out in time for todays shipment so same general corrections to the COC as with yesterdays delivery,

- Please add request for calculation of Hardness for the dissolved metals sample fraction
- Just need a level II report, not Level IV as might be indicated on the COC.

We are trying to figure out if we will need to ship samples on Saturday AM, there is a decent chance that they will be able to get the last samples collected on Friday, early enough to make the last Friday flight, I will let you know as soon as we figure out.

Thanks-

Do you have an airbill number? Yesterday it was addressed to SLR, so there was some difficulty in getting it from Ravn.

Justin-
Incase you have not already received an arrival notification; there should be three coolers of Kenai Wells project samples arriving this AM via RAVN.

Please send me a quick note once the coolers arrive at the lab, ahead of the engage log-in notification.

Thanks-

Coolers are here, Jason. Temperatures are good, there was one issue with the sample containers:

- The 500-mL HDPE Unpreserved for sample “MW87B-0416” was received empty. The sample was open, and has clearly spilled in the cooler. The bag containing this particular container was on top of another group of bottles, on its side; I would recommend against shipping any bottles on their side, the caps are usually fine, but if they are cross threaded even a little bit, any bump can unseat them.
- I can still perform all analyses, I will just reduce the amount used for TSS to 500-mL and take the rest of the analyses (TDS, Alkalinity, Turbidity, pH) from the TSS containter. This will raise the TSS LOQ from 0.5 mg/L to 1.0 mg/L. If this is unacceptable, you will need to resample TSS only.

Let me know if there are any questions, the COC should be coming through on Engage once login is completed.

I think our preference would be to have it reported via 624 & 625 in order to comply with the methods specified by DEC for TAH/TAqH.
Works for me if you can add this to the existing Kenai wells quote.

Do you have todays coolers at the lab yet? It would be helpful if you can send me the COC prior to your full login review.

Thanks-

Subject: RE: Kenai Wells, added task quote needed

Do you have a method preference? Pricing will be the same for TAH/BTEX and TAqH/PAH, so as far as the method goes, the price is the same. Do you need a separate quote from the existing Kenai Wells Quote?

Subject: Kenai Wells, added task quote needed

Justin-
A new task has been added to the Kenai Wells project, I need to get a pricing quote for performing analysis of 10 water samples via either methods 624 & 625 or 8260B & 8270D (only one method pair will be used).

Parameter	Method
TAH	624
TAqH	625
BTEX	8260B
PAH	8270D SIM

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Laboratory Report of Analysis

To: SLR Alaska-Anchorage
2700 Gambell St Suite 200
Anchorage, AK 99503
(907)222-1112

Report Number: **1161901**

Client Project: **105.00148.16001 Kenai Wells**

Dear Jason Gray,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Justin at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Refer to sample receipt form for information on sample condition.

MW39A-0416 (1161901001) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW39B-0416 (1161901002) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW91A-0416 (1161901003) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW91Z-0416 (1161901004) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW39A-0416 (1161901017) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW39B-0416 (1161901018) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW91A-0416 (1161901026) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

MW91Z-0416 (1161901027) PS

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

LCS for HBN 1733533 [WXX/11492 (1323585) LCS

300.0 - Anions - LCS recovery for fluoride (112%) did not meet QC criteria. All associated sample concentrations are less than the LOQ.

LCSD for HBN 1732272 [STS/5019 (1321134) LCSD

2540D - Total Suspended Solids - LCSD is not needed for batch QC. Refer to sample duplicate RPD for precision.

LCSD for HBN 1732348 [XXX/3521 (1321253) LCSD

8270D - LCS/LCSD RPD for aniline (20.9%) does not meet QC criteria. The associated sample concentrations for this analyte are less than the LOQ.

MB for HBN 1734141 [MXX/29753] (1324624) MB

SGS North America Inc.
200 West Potter Drive, Anchorage, AK 99518

Case Narrative

SGS Client: **SLR Alaska-Anchorage**
SGS Project: **1161901**
Project Name/Site: **105.00148.16001 Kenai Wells**
Project Contact: **Jason Gray**

200.8LL - Barium was detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

1161932001MS (1323593) MS

300.0 - Recovery for fluoride (112%) did not meet QC criteria. Sample concentration are less than the LOQ.

1161923001(1324889MS) (1324647) MS

200.8LL - Recoveries for iron (-42%) and zinc (-18%) do not meet QC criteria. Post digestion spike was successful.

1162159001MS (1324698) MS

1631E - Recovery is outside of QC criteria due to possible matrix interference. Refer to LCS for accuracy requirements.

1162311001MS (1324703) MS

1631E - Recovery is outside of QC criteria due to possible matrix interference. Refer to LCS for accuracy requirements.

1161932001MSD (1323594) MSD

300.0 - Recovery for fluoride (111%) did not meet QC criteria. Sample concentration are less than the LOQ.

1161923001(1324889MSD) (1324648) MSD

200.8LL - Recoveries for iron (29%) and zinc (14%) do not meet QC criteria. Post digestion spike was successful.

1162159001MSD (1324699) MSD

1631E - Recovery is outside of QC criteria due to possible matrix interference. Refer to LCS for accuracy requirements.

1162311001MSD (1324704) MSD

1631E - Recovery is outside of QC criteria due to possible matrix interference. Refer to LCS for accuracy requirements.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

Report of Manual Integrations

Laboratory ID	Client Sample ID	Analytical Batch	Analyte	Reason
SW8270D				
1321252	LCS for HBN 1732348 [XXX/35213	XMS9274	1-Chloronaphthalene	BLC
1321253	LCSD for HBN 1732348 [XXX/3521	XMS9274	1-Chloronaphthalene	BLC

Manual Integration Reason Code Descriptions

Code	Description
O	Original Chromatogram
M	Modified Chromatogram
SS	Skimmed surrogate
BLG	Closed baseline gap
RP	Reassign peak name
PIR	Pattern integration required
IT	Included tail
SP	Split peak
RSP	Removed split peak
FPS	Forced peak start/stop
BLC	Baseline correction
PNF	Peak not found by software

All DRO/RRO analysis are integrated per SOP.

Print Date: 05/19/2016 12:05:49PM

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Laboratory Report of Analysis

To: SLR Alaska-Anchorage
2700 Gambell St Suite 200
Anchorage, AK 99503
(907)222-1112

Revised Report - Revision 1 - This report has been reissued to correct the case narrative. No data has changed.

Report Number: **1161922**

Client Project: **105.00148.16001 Kenai Wells**

Dear Jason Gray,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Justin at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Case Narrative

SGS Client: **SLR Alaska-Anchorage**
SGS Project: **1161922**
Project Name/Site: **105.00148.16001 Kenai Wells**
Project Contact: **Jason Gray**

Refer to sample receipt form for information on sample condition.

MW74B-0416 (1161922003) PS

2540D - Total Suspended Solids - Sample duplicate RPD was outside of acceptance limits. The difference between sample and duplicate results is less than the LOQ.

MW74B-0416 DUP (1161922012) BDUP

2540D - Total Suspended Solids - Sample duplicate RPD was outside of acceptance limits. The difference between sample and duplicate results is less than the LOQ.

MW74B-0416 MS (1161922004) BMS

200.8LL - MS recoveries for multiple analytes do not meet QC criteria. Post digestion spike was successful.

MW74B-0416 MS (1161922008) BMS

200.8LL - MS recoveries for multiple analytes do not meet QC criteria. Post digestion spike was successful.

MW74B-0416 MSD (1161922005) BMSD

8270D - BMS/BMSD RPD for aniline (29.2%) does not meet QC criteria. The associated sample concentrations for this analyte are less than the LOQ.
200.8LL - MS recoveries for multiple analytes do not meet QC criteria. Post digestion spike was successful.

MW74B-0416 MSD (1161922009) BMSD

200.8LL - MS recoveries for multiple analytes do not meet QC criteria. Post digestion spike was successful.

LCSD for HBN 1732272 [STS/5019 (1321134) LCSD

2540D - Total Suspended Solids - LCSD is not needed for batch QC. Refer to sample duplicate RPD for precision.

LCSD for HBN 1732348 [XXX/3521 (1321253) LCSD

8270D - LCS/LCSD RPD for aniline (20.9%) does not meet QC criteria. The associated sample concentrations for this analyte are less than the LOQ.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

Report of Manual Integrations

Laboratory ID	Client Sample ID	Analytical Batch	Analyte	Reason
SW8270D				
1161922004	MW74B-0416 MS	XMS9274	1-Chloronaphthalene	BLC
1161922005	MW74B-0416 MSD	XMS9274	1-Chloronaphthalene	BLC
1321252	LCS for HBN 1732348 [XXX/35213	XMS9274	1-Chloronaphthalene	BLC
1321253	LCSD for HBN 1732348 [XXX/3521	XMS9274	1-Chloronaphthalene	BLC

Manual Integration Reason Code Descriptions

Code	Description
O	Original Chromatogram
M	Modified Chromatogram
SS	Skimmed surrogate
BLG	Closed baseline gap
RP	Reassign peak name
PIR	Pattern integration required
IT	Included tail
SP	Split peak
RSP	Removed split peak
FPS	Forced peak start/stop
BLC	Baseline correction
PNF	Peak not found by software

All DRO/RRO analysis are integrated per SOP.

Print Date: 05/19/2016 12:13:43PM

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Laboratory Report of Analysis

To: SLR Alaska-Anchorage
2700 Gambell St Suite 200
Anchorage, AK 99503
(907)222-1112

Report Number: **1161924**

Client Project: **105.00148.16001 Kenai Wells**

Dear Jason Gray,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Justin at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Print Date: 05/19/2016 8:37:34AM

Flag Status: Flagged

Justin,

The 625M SIM PAH analysis for sample "MW62A-0416" can and should be disposed (tossed without analysis). There is no need to log them in, or make them part of the record. However, thanks for doing a thorough check.

Bret

Thanks Justin. We collected those two extra containers mistakenly so we included them with the coolers in case someone wants to have them run.

>> There will samples collected today (Friday) coming in Saturday by air shipment. Its possible, there may be a couple coolers driven back late Saturday or Sunday for dropoff on Sunday or first thing Monday if hold times are O.K (these would be samples collected Saturday). We can provide an update later in the day. Its little dynamic at the moment.

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Laboratory Report of Analysis

To: SLR Alaska-Anchorage
2700 Gambell St Suite 200
Anchorage, AK 99503
(907)222-1112

Report Number: **1161923**

Client Project: **105.00148.16001 Kenai Wells**

Dear Jason Gray,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Justin at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Case Narrative

SGS Client: **SLR Alaska-Anchorage**
SGS Project: **1161923**
Project Name/Site: **105.00148.16001 Kenai Wells**
Project Contact: **Jason Gray**

Refer to sample receipt form for information on sample condition.

PQW1-0416 (1161923002) PS

200.8LL - Barium is detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

Decker-0416 (1161923003) PS

200.8LL - Barium is detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

PQW1-0416 (1161923006) PS

200.8LL - Barium is detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

Decker-0416 (1161923007) PS

200.8LL - Barium is detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

LCSD for HBN 1732272 [STS/5019 (1321134) LCSD

2540D - Total Suspended Solids - LCSD is not needed for batch QC. Refer to sample duplicate RPD for precision.

LCSD for HBN 1732348 [XXX/3521 (1321253) LCSD

8270D - LCS/LCSD RPD for aniline (20.9%) does not meet QC criteria. The associated sample concentrations for this analyte are less than the LOQ.

MB for HBN 1734141 [MXX/29753] (1324624) MB

200.8LL - Barium is detected in the MB above the LOQ. The associated sample concentrations are 10 times greater than the concentration in the MB.

1161923001(1324889MS) (1324647) MS

200.8LL - MS recoveries for iron (-42%) and zinc (-18) do not meet QC criteria. Post digestion spike was successful.

1161923001(1324889MSD) (1324648) MSD

200.8LL - MSD recoveries for iron (29%) and zinc (14%) do not meet QC criteria. Post digestion spike was successful.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Print Date: 05/23/2016 2:25:37PM

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Laboratory Report of Analysis

To: AECOM Environmental
700 G St. Ste. 500
Anchorage, AK 99501
(907)261-6785

Report Number: **1162930**

Client Project: **APT Task 4**

Dear Paul Myerchin,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Chuck at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Manual Integration Reason Code Descriptions

Code	Description
O	Original Chromatogram
M	Modified Chromatogram
SS	Skimmed surrogate
BLG	Closed baseline gap
RP	Reassign peak name
PIR	Pattern integration required
IT	Included tail
SP	Split peak
RSP	Removed split peak
FPS	Forced peak start/stop
BLC	Baseline correction
PNF	Peak not found by software

All DRO/RRO analysis are integrated per SOP.

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & UST-005 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020A, 7470A, 7471B, 8021B, 8082A, 8260B, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
D	The analyte concentration is the result of a dilution.
DF	Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
F	Indicates value that is greater than or equal to the DL
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
JL	The analyte was positively identified, but the quantitation is a low estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
M	A matrix effect was present.
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
Q	QC parameter out of acceptance range.
R	Rejected
RPD	Relative Percent Difference
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Print Date: 06/14/2016 2:42:37PM

Sample Summary

Review Criteria	Y/N (yes/no)	Exceptions Noted below
		exemption permitted if sampler hand carries/delivers.
Were Custody Seals intact? Note # & location		ABSENT
COC accompanied samples?	Y	
**exemption permitted if chilled & collected <8hrs ago or chlling not required (i.e., waste, oil)		
Temperature blank compliant* (i.e., 0-6 °C after CF)?	Y	Cooler ID: 1 @ 4.8 °C Therm ID: D12
		Cooler ID: @ °C Therm ID:
		Cooler ID: @ °C Therm ID:
		Cooler ID: @ °C Therm ID:
		Cooler ID: @ °C Therm ID:
If >6°C, were samples collected <8 hours ago?		
If <0°C, were sample containers ice free?		
If samples received without a temperature blank, the "cooler temperature" will be documented in lieu of the temperature blank & "**COOLER TEMP**" will be noted to the right. In cases where neither a temp blank nor cooler temp can be obtained, note "ambient" or "chilled".		
Note: Identify containers received at non-compliant temperature . Use form FS-0029 if more space is needed.		
		Note: Refer to form F-083 "Sample Guide" for hold times.
Were samples received within hold time?	Y	
Do samples **match COC**** (i.e.,sample IDs,dates/times collected)?	Y	
**Note: If times differ <1hr, record details & login per COC.		
Were analyses requested unambiguous?	Y	
		***Exemption permitted for metals (e.g,200.8/6020A).
Were proper containers (type/mass/volume/preservative***)used?	N	Only one set of VOA vials were provided to the client when they needed 2 sets. They received five 250 mL jars when they only *
IF APPLICABLE		
Were Trip Blanks (i.e., VOAs, LL-Hg) in cooler with samples?	Y	
Were all VOA vials free of headspace (i.e., bubbles ≤ 6mm)?	Y	
Were all soil VOAs field extracted with MeOH+BFB?		
Note to Client: Any "no" answer above indicates non-compliance with standard procedures and may impact data quality.		

Additional notes (if applicable):

*needed two 250 mL jars.

2 mL of HCl added to the 250 mL containers for preservation. Lot #: LW09-0463-12-10.

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM- The container was received damaged.
FR- The container was received frozen and not usable for Bacteria or BOD analyses.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.

Subject: **LNG Facilities Groundwater Quality Sampling and Testing Report – Event 2, Onshore LNG Facilities, Alaska LNG Project, Nikiski, Alaska**

Fugro Consultants, Inc. (Fugro) is pleased to present this groundwater quality monitoring event report for the onshore facilities of the Alaska LNG Project (AKLNG) located in Nikiski, Alaska. Our services were authorized under Service Work Order No. AKLNG-FUG-US-005 Rev 0, dated March 2, 2016 in accordance with the Service Agreement No. A2275592 between Fugro and ExxonMobil Global Services Company, dated October 29, 2012. Fugro has been providing services for the proposed AKLNG Project since 2014.

We appreciate the opportunity to be of service to EMALL. Please call Mr. Abhishek Shethji, P.E., Fugro's Project Manager at (713) 369-5431, if you have any questions or comments concerning this report, or when we may be of further assistance.

Sincerely,

FUGRO CONSULTANTS, INC.
TBPE Firm Registration No. 299

1.0 INTRODUCTION

1.1 PROJECT DESCRIPTION

The Alaska Gasline Development Corporation, BP Alaska LNG LLC, ConocoPhillips Alaska LNG Company, and ExxonMobil Alaska LNG LLC (Applicants) plan to construct one integrated liquefied natural gas (LNG) Project (Project) with interdependent facilities for the purpose of liquefying supplies of natural gas from Alaska, in particular from the Point Thomson Unit (PTU) and Prudhoe Bay Unit (PBU) production fields on the Alaska North Slope (North Slope), for export in foreign commerce and opportunities for in-state deliveries of natural gas.

The Natural Gas Act (NGA), 15 U.S.C. § 717a(11) (2006), and Federal Energy Regulatory Commission (FERC) regulations, 18 C.F.R. § 153.2(d) (2014), define "LNG terminal" to include "all natural gas facilities located onshore or in State waters that are used to receive, unload, load, store, transport, gasify, liquefy, or process natural gas that is ... exported to a foreign country from the United States." With respect to this Project, the "LNG Terminal" includes the following: a liquefaction facility (Liquefaction Facility) in Southcentral Alaska; an approximately 804-mile gas pipeline (Mainline); a gas treatment plant (GTP) on the North Slope; an approximately 62-mile gas transmission line connecting the GTP to the PTU gas production facility (PTU Gas Transmission Line or PTTL); and an approximately 1-mile gas transmission line connecting the GTP to the PBU gas production facility (PBU Gas Transmission Line or PBTL). All of these facilities are essential to export natural gas in foreign commerce.

The new Liquefaction Facility would be constructed on the eastern shore of Cook Inlet just south of the existing Agrium fertilizer plant on the Kenai Peninsula, approximately 3 miles southwest of Nikiski and 8.5 miles north of Kenai (Plate 1). The Liquefaction Facility would include the structures, equipment, underlying access rights, and all other associated systems for final processing and liquefaction of natural gas, as well as storage and loading of LNG, including terminal facilities and auxiliary marine vessels used to support Marine Terminal operations (excluding LNG carriers [LNGCs]). The Liquefaction Facility would include three liquefaction trains combining to process up to approximately 20 million metric tons per annum (MMTPA) of LNG. Two 240,000-cubic-meter tanks would be constructed to store the LNG. The Liquefaction Facility would be capable of accommodating two LNG carriers. The size of LNGCs that the Liquefaction Facility would accommodate would range between 125,000–216,000-cubic-meter vessels.

EMALL contracted Fugro to investigate the site conditions of the onshore LNG facilities, marine LNG Terminal, and marine pipeline corridors. Overview of overall project facilities described above are presented on Plate 2. Completed onshore explorations and the proposed LNG Facilities plant layout are presented on Plate 3. This report presents the results of the second groundwater quality sampling and testing study for the onshore LNG facilities conducted during the 2016 geophysical and geotechnical site investigation (G&G) program at the Alaska LNG site (Site) near Nikiski, Alaska (Plate 1).

A list of the reports (including the superseded reports) that are generated by Fugro as part of 2014, 2015 and 2016 G&G programs are presented in the table below. A copy of the below table is also separately submitted to AKLNG under document number USAL-FG-BRCTL-00-000001-000[1].

Summary of Fugro Reports Developed for 2014, 2015 and 2016 G&G Programs

1.2 GENERAL SCOPE OF WORK

Fugro prepared this report to document the sampling and analyses of groundwater in wells at the Alaska LNG site (Site) near Nikiski, Alaska (see Plate 1 – Vicinity Map). Since 2014, Fugro has completed multiple phases of investigations at the Site including the completion of 130 borings and the installation of twenty-six (26) groundwater monitoring wells, four (4) observation wells, and three (3) aquifer pump test wells. Locations of the borings and wells are depicted on Plate 3 – Plan of Explorations and Plate 4 – Investigation Plan.

The intent of the two water quality monitoring events was to collect baseline water quality data across the Site in support of the project.

For this event, water sampling and testing activities were conducted in accordance with an approved Project Execution Plan (PEP) (USAL-FG-GPZZZ-00-002016-001) and Well Sampling Method Statement (Appendix A). Specific deviations from the PEP, which were discussed with the Client prior to implementation included the following:

- Four (4) Third-Party wells were also sampled during this monitoring event.
- The event was conducted in two phases; one completed in August and one completed in September. The August phase of sampling followed the completion of the Observation Wells, and the data was used to address questions regarding water quality raised during discussions with the Alaska Department of Environmental Conservation (ADEC) for future aquifer pump testing water discharge. The September phase of the event included completing the testing program and allowed for additional testing to be conducted for specific wells to confirm previous results.
- ADEC-approved analytical laboratories were used to provide testing of select analytes in an effort to obtain analytical detection limits below ADEC screening criteria. Testing laboratories utilized during this investigation include SGS North America Inc. (SGS) in Anchorage, Alaska and Test America Laboratories (TA) in Tacoma, Washington or Denver, Colorado. Samples from wells OW-2, OW-4, and TPW-5 which were collected and submitted for Chlorophyll-A analyses were subcontracted by SGS to ALS Laboratory (ALS) in Kelso, Washington.

1.3 LIMITATIONS

Fugro makes no claim or representation concerning any activity or condition falling outside the specified purposes to which this report is directed. We have conducted our work using the standard level of care and diligence normally practiced by recognized engineering firms now performing similar services under similar circumstances. We intend for this report, including all illustrations, to be used in its entirety. The information presented in this report may not apply to locations not explored by borings or areas outside the project boundaries. This information should be made available to prospective users for information only, and not as a warranty of subsurface conditions.

1.4 ELEVATION DATUMS

All coordinates are reported in Zone AK4 North, NAD83 (NSRS 2007), and are in feet. Topographic elevations for onshore areas are referenced to NAVD88. It should be noted that the elevations in the marine report are referenced to Mean Lower Low Water (MLLW). The following conversion formula is used to convert the elevations from MLLW to NAVD88:

- Elevation, in feet (NAVD88) = Elevation, in feet (MLLW) – 7.32 feet

Please note that this conversion formula is only applicable at the Nikiski Area. Elevations presented in this report, and the corresponding illustrations and engineering plates are all referenced to the NAVD88 datum, unless noted otherwise.

2.0 GROUNDWATER SAMPLING AND TESTING ACTIVITIES

2.1 SAMPLING ACTIVITIES

On August 8 through 12, 2016, field personnel from Fugro and SLR International Corp (SLR, a subcontractor retained by Fugro to assist with sampling activities) visited the Site to conduct the August phase of groundwater monitoring event. On September 16 through 23, 2016, Fugro and SLR visited the Site to conduct the September phase of the monitoring event. This report presents a summary of the results from both phases of the monitoring event, herein referred to as Event 2. Wells which were sampled during Event 2 are summarized in Table 1, and included nine (9) wells completed into the first water bearing unit below the Site (Water Bearing Unit 1: MW-27B, MW-39B, MW-50B, MW-74B, MW-82B, MW-87B, MW-138B, OW-1, and OW-3), ten (10) wells completed into the second encountered water bearing unit (Water Bearing Unit 2: MW-39A, MW-50A, MW-62A. MW-74A, MW-82A, MW-91A, OW-2, OW-4, APT-1, and APT-2), and one (1) well completed into the third water bearing unit below the Site (Water Bearing Unit 3: APT-3). In addition, four (4) third-party wells were also sampled during this event (PQW-1, TPW-1, TPW-2, and TPW-5). The locations of all wells is shown on Plate 5 – Water Quality Well Sampling Locations – Event 2.

Depth to groundwater data was obtained on September 22, 2016 from all the Site wells by reviewing water level data collected by Micro-Diver water level data logger units previously installed in the wells. Prior to purging and sampling, the depth to groundwater was also measured in all monitoring wells to be sampled using a water level indicator probe. Groundwater depth measurements and elevations are summarized in Table 2.

Industry-standard sampling protocol was employed during Event 2 in accordance with ASTM D5903/4448 and with ADEC guidelines[2]. All wells were purged prior to drawing samples. With the exception of Third-Party well TPW-2, field personnel purged all wells using a low-flow submersible pump, maintaining a pumping rate between 0.1 to 0.5 liters per minute. During purging, water levels were periodically checked with a water level indicator to monitor drawdown. Wells were purged at the low-flow rates while continuously monitoring for changes in water pH, turbidity, dissolved oxygen (DO), conductivity, Oxidation-Reduction Potential (ORP), and temperature using a YSI 556 Multi-meter equipped with a flow-through cell, and a Scientific Micro TPN. Well TPW-2 was purged using the domestic well pump that is installed within the well. The TPW-2 well pump was activated and allowed to run for about 24 minutes, while obtaining water quality parameters. Water quality field parameters are summarized in Table 3.

Except for well TPW-2, once water quality parameters stabilized, purging was stopped, and water samples were obtained using low-flow pumping methods. Groundwater was collected from well TPW-2 through the existing hose connected to the well. Groundwater samples were retained in analyte-appropriate containers pre-cleaned by the laboratory in accordance with Environmental Protection Agency (EPA) protocols.

[2] ADEC Division of Spill Prevention and Response, Contaminated Sites Program, Field Sampling Guidance, March 2016. https://dec.alaska.gov/spar/csp/guidance_forms/docs/Field-Sampling-Guidance-Final-5-13-2016.pdf

Duplicate groundwater samples were also collected from randomly selected wells during the sampling event to provide quality assurance (QA) data. The duplicate samples were collected from wells MW-87B, APT-1, and TPW-1.

All sampling containers were uniquely labeled and placed in ice-filled coolers, pending delivery to the testing laboratory. Well sampling forms are presented in Appendix B.

Purge water and other investigation-derived waste liquids were containerized and temporarily stored at the ASRC Rig Tenders yard, until removed and disposed offsite on September 27, 2016. A copy of the non-hazardous waste manifest is presented in Appendix C.

2.2 CHEMICAL AND ANALYTE TESTING PROGRAM

Due to short hold time restrictions for select analytical testing methods, groundwater samples were packed and shipped daily under chain-of-custody documentation to ADEC-approved testing laboratories, SGS in Anchorage, Alaska and/or TA in Tacoma, Washington or Denver, Colorado. Groundwater samples from wells OW-2, OW-4, and TPW-5 which were collected and submitted for Chlorophyll-A analyses were subcontracted by SGS to ALS in Kelso, Washington.

Groundwater samples collected during this event were analyzed for some or all of the parameters summarized by Analytical Suite and Testing Methods in this section (see Table 1 for a listing of which well samples were tested for which analytical suite).

Analytical Suite and Methods

Parameter	Method
BASIC SUITE OF ANALYTES	
Water Quality Suite	
Hardness	SM2340B
Alkalinity	SM21 2320B
Nitrate/Nitrite	SM21 4500NO3-F
Total Dissolved Solids (TDS)	SM21 2340C
Total Suspended Solids (TSS)	SM21 2340D
Turbidity	SM21 2130B
Chloride, Sulfate, Fluoride, Nitrate, Nitrite	EPA 300.0
pH [2]	SM21 4500-H B
Metals (total and dissolved)	
Total and Dissolved Metals – Al, As, Ba, Be, Ca, Cd, Cr, Co, Cu, Fe, K, Pb, Mg, Mn, Mo, Na, Ni, Sb, Se, Tl, V, Zn	EPA 200.8
Total and Dissolved Mercury	EPA 1631E
Organics	
Volatile Organic Compounds	SW8260C
Semi-Volatile Organic Compounds	SW8270D
Petroleum Hydrocarbons	
Gasoline Range Organics	AK101
Diesel Range Organics	AK102
Residual Range Organics	AK103
ADDITIONAL ANALYTES ADDED TO THIS EVENT	
Water Quality Suite	
Total Solids	SM21 2540B
Chemical Oxygen Demand	EPA 410.4
Ammonia-N	SM21 4500-NH3 G
Total Kjeldahl Nitrogen	SM21 4500-N D
Total Phosphorus/Ortho phosphate	SM21 4500P-B,E
Total Organic Carbon/Dissolved Organic Carbon	SM21 5310B
Fecal Coliform	SM21 9222D
Chlorophyll A	SM21 10200H
Organics	
Volatile Organic Compounds	SW8011, LL VOC [1]
Pesticides	SW8270D SIM
Polychlorinated Biphenyls	SW8082A

Notes:
1 = Analytes 1,2,3-Trichloropropane and 1,2-Dibromoethane only
2 = Field pH values measured within about 15 minutes of collection are judged, in the environmental assessment practice, to be more representative than those measured in the laboratory. Field and laboratory measured pH values are both presented in Table 3.

3.0 SUBSURFACE CONDITIONS

Three distinct water bearing zones or units have been identified during the previous 2014 and 2015 field investigations. Activities completed between 2014 and 2016 included the installation of wells within all three water bearing units, of which select wells were included during this monitoring event.

The first encountered water bearing unit (Water Bearing Unit 1) is found within the Killey geologic unit, is unconfined, and was observed across the Site at elevations ranging between 99.21 feet (NAVD88) (at the location of well MW-82B) and 71.23 feet (NAVD88) (at the location of well MW-86BA). This groundwater unit was observed present at shallower depths in proximity to surface water bodies.

Groundwater elevations in Water Bearing Unit 1 wells located near the western face of the shoreline bluff are lower than groundwater elevations measured in wells located upgradient of the bluff face. As a result, four (4) of the wells (MW-62B, MW-77B, MW-91B, and MW-112B) targeting Water Bearing Unit 1 remain dry, consistent with observations made following well installation. The four dry wells are located in the western, coastal portion of the Site, and are dry as they were not seated deep enough into the Killey-Moosehorn transition zone.

Water Bearing Units 2 and 3 are present within the Moosehorn geologic unit. Water Bearing Unit 2 is semi-confined, and lies immediately beneath the Killey-Moosehorn transition zone. The potentiometric (i.e. piezometric) surface (the surface to which water in a confined aquifer will rise within a well) elevation in Water Bearing Unit 2 was observed ranging between 94.84 feet (NAVD88) (at the location of well MW-82A) and 15.71 feet (NAVD88) (at the location of well MW-91A). This elevation range is reflective of conditions at the most upgradient and most downgradient locations, respectively. Water Bearing Unit 3 is confined and the potentiometric surface was observed at 45.86 feet (NAVD88) at the location of well APT-3.

The wells installed at the Site cover a large spatial area, and top of well casing elevations vary from 97.75 feet (NAVD88) at well MW-39B in the southern portion of the Site to 136.24 feet (NAVD88) at well MW-14B about 5,000 feet to the north. Graphical depictions of the variation in groundwater elevations within the wells, as recorded by the Micro-Divers are presented on Plates 6 through 8. It should be noted that a 7.1M earthquake occurred in the Site vicinity on January 24, 2016. Groundwater levels and/or the well casing itself at select well locations showed a response to the earthquake as captured by the Micro-Divers. The top of casing elevations were not re-surveyed following the earthquake event.

We also note that groundwater within well MW-98B completed in Water Bearing Unit 1 was measured at 91.30 feet (NAVD88) during this event, which represents a higher elevation than groundwater levels within nearby wells. With the exception of the period between November 2015 and March 2016, groundwater within this well has measured anomalously high compared to the other wells since installation. Between November 2015 and March 2016, this well showed a decrease in groundwater elevation which may be attributed to local groundwater use. The exact cause of the anomalous changes in groundwater elevation at this well is unknown. The Micro-Diver in this well also stopped transmitting between the period of April 12 to September 22, 2016, and was subsequently changed out.

Graphical depictions of the groundwater contours of Water Bearing Units 1 and 2 for this event are presented as Plates 9 and 10. In general, groundwater flow within both water bearing units is in a westerly/southwesterly direction toward Cook Inlet. Groundwater gradients do fluctuate in both water bearing units as the water flows from east to west. The groundwater gradient within Water Bearing Unit 1 ranges between 0.008 to 0.01 feet per foot (ft/ft) and ranges between 0.008 to 0.06 ft/ft within Water Bearing Unit 2. Groundwater contours are not presented for Water Bearing Unit 3 as there is only one well installed within this unit.

4.0 DATA QUALITY ASSESSMENT

For this event, a quality assurance program was implemented which evaluated project administration, sampling, quality control, and data review. The analytical laboratory data was reviewed for consistency with project specific requirements[3], *ADEC Technical Memorandum, Environmental Laboratory Data and Quality Assurance* requirements, analytical method criteria, and internal laboratory criteria. The data review process included the following:

- Review of Chain of Custody (COC) records for completeness, signatures, and dates;
- Identification of any sample receipt or preservation anomalies that could impact data quality;
- Verification that quality control blanks (field blanks, equipment blanks, trip blanks, etc.) were properly prepared, identified, and analyzed;
- Evaluation of whether laboratory reporting limits met project goals;
- Review of calibration verification recoveries to confirm that the laboratory did not identify any Calibration Verifications (CCV) recovery outliers or other calibration related criteria outside applicable acceptance limits;
- Verification that surrogate analyses were within recovery acceptance limits;
- Verification that Laboratory Control Samples (LCS), Laboratory Control Sample Duplicates (LCSD), Matrix Spike (MS), and Matrix Spike Duplicates (MSD) were within recovery acceptance limits;
- Evaluation of the result relative percent difference between primary and duplicate field samples, LCS/LCSD, MS/MSD, and laboratory duplicates; and
- Providing an overall assessment of laboratory data quality and qualifying sample results if necessary.

SGS and TA, the chemical testing laboratories which conducted the testing for this event, each maintains an internal quality assurance program and standard operating procedures. SLR completed Quality Assurance Reviews (QARs) for the analytical data collected in August 2016, and two QARs for the September 2016 analytical data. SLR's findings are presented in *Laboratory Data Quality Assurance Review, Groundwater Monitoring Event A: August 2016, Nikiski, Alaska, Alaska LNG*, dated November 2016; *Laboratory Data Quality Assurance Review, Groundwater Monitoring Event 2: September 2016,*

[3] Method Statement, Alaska LNG Well Sampling, Issue 1 Rev 1, dated April 28, 2016 (presented in Appendix A).

Nikiski, Alaska, Alaska LNG, dated November 2016; and *Laboratory Data Quality Assurance Review, Groundwater Monitoring Event 2: September 2016, Test America Laboratory Reports, Nikiski, Alaska, Alaska LNG*, dated November 2016; (Appendix D) and are briefly summarized below.

4.1 QAR EVENT A: AUGUST 2016

For this event, samples were analyzed by SGS or by ALS (Chlorophyll-A analysis on samples from wells OW-2, OW-4, and TPW-5).

SLR adhered to required and established sampling and chain-of-custody (COC) protocols as observed in the field by Fugro and by review of all field documents prepared by SLR. It was noted that for one of the laboratory work orders, samples included on one COC were shipped in multiple coolers. The laboratory did not flag any of these samples as being received at a temperature that would suggest sample integrity was a concern. However, subsequent COC documentation included one COC for each cooler. This change allowed for better monitoring of the temperatures of each cooler.

Chlorophyll-A analytical testing documentation regarding samples from wells OW-2, OW-4, and TPW-5 (subcontracted to ALS) showed notations on the laboratory's sample receipt forms that COCs were not included in the coolers with the samples. The samples were transferred by SGS at the Anchorage airport from cargo shipper Ravn Air directly to Alaska Airlines for subsequent shipment to ALS within a limited timeframe due to a short method hold time and shipping logistics. ALS was aware of the samples arrival per e-mail notification by SGS which included the emailed COCs. As these samples were received at ALS with no noted discrepancies, we judge that the data collection methods were sufficient to provide representative samples for testing.

For non-detect results, limits of detection (LODs) were compared to applicable cleanup levels for the Site. For groundwater samples, LODs were compared to 18 AAC 75.345, Table C, groundwater cleanup levels. Table 6 of the QAR for Event A: August 2016 shows results of select non-detected analytes with LODs and Detection Limits (DL) not meeting project limits. All affected analytes were either select PCBs by SW8082, VOCs by SW8260, or SVOCs by SW8270D. For these affected analytes, typical methodology limitations caused the LOD and DL to not meet project goals, but in Fugro and SLR's opinion the data is still useable for this investigation. Additional laboratory testing was performed during the September 2016 sampling event to improve LOD compliance. Affected analytes are highlighted in Tables 5 through 11.

Based on these QAR findings, we judge that the data from this event is valid and can be relied upon for the purpose of this investigation.

4.2 QAR EVENT 2: SEPTEMBER 2016

For samples collected in September 2016, alternative analytical testing options were utilized for select analytes to improve LOD compliance. As a result, samples were analyzed by either SGS or TA based upon their limits of detection capabilities.

SLR generally adhered to required and established sampling and COC protocols as observed in the field by Fugro and by review of all field documents prepared by SLR with the exception of one work order. For that one work order, only two pages of the three page COC were signed as "Relinquished By" by SLR personnel. Samples were in SLR custody with the exception of shipping, from

the time of collection until delivery to the laboratory. All samples were analyzed by the methods and for the analytes intended and requested. In our opinion, the data collection methods were sufficient to provide representative samples for testing.

For non-detect results, LODs were compared to 18 AAC 75.345, Table C, groundwater cleanup levels. Table 6 of the Event 2: September 2016 QAR and Table 4 of the Event 2: September 2016, Test America Laboratory Reports QAR shows results of select non-detected analytes with LODs and DLs not meeting project limits. All affected analytes were either PCBs by SW8082, VOCs by SW8260, or SVOCs by SW8270D. It should be noted that utilizing alternative analytical testing laboratories was successful in improving overall LOD compliance. Affected analytes are highlighted in Tables 5 through 11.

Based on these QAR findings, we judge that the data from this event is valid and can be relied upon for the purpose of this investigation.

5.0 RESULTS OF GROUNDWATER QUALITY ANAYLSIS

Groundwater analytical results are summarized in Tables 5 through 11, and the analytical laboratory reports are presented in Appendix E. Table 4 is provided as a cross-reference between the site Well Identifications (ID) and laboratory and field sample IDs. Analytical results for well samples obtained were compared to ADEC groundwater cleanup levels from 18 AAC.75 Table C (May 8, 2016). Table 5 provides a summary of all well data. Tables 6, 7, and 8 provide a summary of analyses for wells located in Water Bearing Units 1, 2, and 3, respectively. Analytical results for samples collected from the Third-Party, OW, and APT wells were also compared to most conservative of ADEC's Water Quality Standards for Designated Uses criteria from 18 AAC.70 (February 19, 2016), and data is provided in Tables 9 and 10. Table 11 provides a summary of analytical results for samples collected from the former quarry area.

To provide a discussion of the water quality data, summaries of select data results compared within various well groupings are presented below.

5.1 WATER BEARING UNIT 1

No gasoline range organics, PCBs, pesticides, fecal coliform, Chlorophyll-A, or VOCs (including trichloroethene, see Plate 12) were detected during this monitoring event.

With the exception of bis(2-ethylhexyl)phthalate, no SVOCs were detected in any of the nine (9) wells sampled during this event. Analyses detected 0.0077 milligrams per liter (mg/L) of bis(2-ethylhexyl)phthalate in well MW-74B, exceeding the ADEC Table C groundwater cleanup level of 0.006 mg/L.

Detected petroleum hydrocarbon concentrations were well below respective ADEC Table C groundwater cleanup levels. Analyses detected diesel range organics in six (6) of the nine (9) wells (MW-27B, MW-39B, MW-50B, MW-74B, MW-82B, MW-87B) sampled at concentrations ranging between 0.278 mg/L (MW-74B) and 0.447 mg/L (MW-50B). Residual range organics were also detected in two (2) out of nine (9) wells at concentrations of 0.155 (OW-3) and 0.16 mg/L (OW-1).

Detected total and dissolved metal concentrations were below respective ADEC Table C groundwater cleanup levels, where established. Total arsenic concentrations ranged from 0.00073 mg/L (MW-50B) to 0.00336 mg/L (OW-3, see Plate 11). For OW-1 and OW-3, detected concentrations of select total and/or dissolved metals including aluminum, chromium, copper, iron, manganese, and/or nickel exceeded respective ADEC Water Quality Standards for Designated Uses.

pH values measured in the field (see Plate 13) varied from 4.82 to 6.34 Standard Units (SU).

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride in all nine wells varying from 4.07 mg/L to 115 mg/L (Highest concentration detected in the sample from MW-39B.)
- Fluoride in all nine wells varying from 0.098 mg/L to 0.126 mg/L (OW-3)
- Alkalinity in all nine wells varying from 12 mg/L to 70.9 mg/L (OW-1)
- Hardness as $CaCO_3$ in all nine wells varying from 18.5 mg/L to 138 mg/L (MW-39B)

5.2 WATER BEARING UNIT 2

No PCBs, pesticides, or SVOCs were detected in the ten (10) wells sampled during this monitoring event.

Analyses detected fecal coliform in one sample (OW-2) at a concentration of 4.9 Col/100mL, exceeding the ADEC Water Quality Standards for designated uses of 1.0 Col/100mL. No Chlorophyll A was detected in any of the samples analyzed.

With the exception of trichloroethene, toluene, and chloromethane, no other VOCs were detected in any of the ten wells sampled during this event. Analyses detected trichloroethene in three (3) of ten (10) wells (OW-2, OW-4, and APT-1) at concentrations ranging between 0.00047 mg/L and 0.057 mg/L (see Plate 15), exceeding ADEC Table C groundwater cleanup level of 0.005 mg/L in OW-4 and APT-1. Analyses detected toluene at 0.0027 mg/L (APT-2) and chloromethane at a concentration of 0.00039 mg/L (OW-2 and OW-4), all below ADEC Table C groundwater cleanup criteria.

Detected petroleum hydrocarbon concentrations were well below respective ADEC Table C groundwater cleanup levels. Analyses detected gasoline range organics in one (1) of the ten (10) wells sampled (APT-1) at a concentration of 0.0497 mg/L. Diesel range organics were detected in eight (8) out of ten (10) samples (from wells MW-39A, MW-50A, MW-62A, MW-74A, MW82-A, OW-4, APT-1 and APT-2) at concentrations ranging between 0.24 mg/L and 0.486 mg/L. Residual range organics were detected in two (2) of the ten (10) wells at concentrations of 0.192 mg/L (OW-2) and 0.476 mg/L (OW-4), all below ADEC Table C groundwater cleanup criteria.

Various total metals were detected in all ten (10) wells sampled. With the exception of arsenic, detected total metals were well below respective ADEC Table C groundwater cleanup levels, where established. Analyses detected arsenic at concentrations ranging from 0.00883 mg/L to 0.131 mg/L (see Plate 14), exceeding the ADEC Table C groundwater cleanup level of 0.01 mg/L in MW-39A, MW-50A, MW-62A, MW-74A, OW-2, OW-4, APT-1, and APT-3. For OW-2, OW-4, APT-1, and APT-3, detected concentrations of select total and/or dissolved metals including aluminum, antimony, arsenic,

chromium, copper, iron, lead, manganese, nickel, vanadium, and/or zinc exceeded respective ADEC Water Quality Standards for designated uses.

pH values measured in the field (see Plate 16) varied from 7.08 to 8.67 SU.

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride in all ten wells varying from 4.22 mg/L to 19.7 mg/L (APT-1)
- Fluoride in all ten wells varying from 0.13 mg/L to 0.345 mg/L (OW-2)
- Alkalinity in all ten wells varying from 70.3 mg/L to 106 mg/L (MW-50A)
- Hardness as $CaCO_3$ in all ten wells varying from 13.4 mg/L to 92.8 mg/L (MW-50A)

5.3 WATER BEARING UNIT 3

No gasoline range organics, PCBs, pesticides, fecal coliform, Chlorophyll-A, or SVOCs were detected in well APT-3 during this monitoring event.

With the exception of trichloroethene, no other VOCs were detected during this event. Analyses detected 0.015 mg/L of trichloroethene (see Plate 18), exceeding the ADEC Table C groundwater cleanup level of 0.005 mg/L.

Detected petroleum hydrocarbon concentrations were well below respective ADEC Table C groundwater cleanup levels. Analyses detected diesel range and residual range organics at concentrations of 0.518 mg/L and 0.165 mg/L, respectively.

Detected concentrations of select total and/or dissolved metals including, aluminum, arsenic, boron, chromium, copper, iron, lead, manganese, molybdenum, nickel, and/or zinc exceeded respective ADEC Water Quality Standards for designated uses. Total arsenic was detected at a concentration of 0.0798 mg/L (see Plate 17), exceeding ADEC screening criteria of 0.01 mg/L.

pH was measured in the field (see Plate 19) at 9.03 SU.

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride at 41.6 mg/L
- Fluoride at 3.03 mg/L (exceeds ADEC Water Quality Standard of 1 mg/L)
- Alkalinity at 509 mg/L
- Total Dissolved Solids at 709 mg/L (exceeds ADEC Water Quality Standard of 500 mg/L)
- Hardness as $CaCO_3$ at 15.2 mg/L

5.4 THIRD-PARTY WELLS

No PCBs, pesticides, fecal coliform, Chlorophyll A, or SVOCs were detected in the third-party wells sampled during this monitoring event.

Analyses detected select VOCs including benzene, chloromethane, ethylbenzene, and xylenes in two (2) of the four (4) wells (PQW-1 and TPW-5) analyzed. With the exception of benzene, detected VOCs were below respective ADEC Water Quality Standards for Designated Uses. Benzene was detected in well PQW-1 at 0.0066 mg/L during the September 2016 sampling event, exceeding the ADEC Table C groundwater cleanup level of 0.005 mg/L.

Gasoline range organics were detected in well PQW-1 at 0.0359 mg/L. Analyses detected diesel range organics in all four (4) wells sampled at concentrations ranging from 0.228 mg/L (TPW-2) to 0.421 mg/L (TPW-5). Residual range organics were only detected in TPW-5 at a concentration of 0.326 mg/L. All detected hydrocarbons were well below respective ADEC Water Quality Standards for Designated Uses.

Various total and dissolved metals were detected in all four (4) wells sampled. With the exception of aluminum, arsenic, copper, iron, lead, manganese, and zinc, detected total metals were below respective ADEC Water Quality Standards for Designated Uses, where established. Analyses detected arsenic from 0.000302 mg/L (TPW-1) to 0.0149 mg/L (TPW-2), exceeding the ADEC Water Quality Standards for Designated Uses of 0.01 mg/L in TPW-2. Copper ranged from 0.00021 mg/L to 0.0247 (PQW-1); lead ranged from 0.00818 mg/L to 0.0265 mg/L (TPW-5); manganese ranged from 0.088 mg/L (TPW-2) to 0.751 mg/L (PQW-1); and zinc ranged from 0.00113 mg/L to 5.25 mg/L (TPW-5). With the exception of dissolved arsenic, lead, and zinc, detected total metals were well below respective ADEC Water Quality Standards for Designated Uses, where established. Dissolved arsenic ranged from 0.000418 mg/L to 0.0159 mg/L, exceeding ADEC Water Quality Standards for Designated Uses criteria in TPW-2; dissolved lead ranged from 0.0000328 mg/L to 0.00278 mg/L, exceeding ADEC Water Quality Standards for Designated Uses criteria in TPW-5; and dissolved zinc ranged from 0.00168 mg/L to 0.483 mg/L, exceeding ADEC Water Quality Standards for Designated Uses criteria in TPW-5.

pH values measured in the field varied from 6.83 to 8.68 SU.

No ADEC Table C groundwater cleanup levels have been established for the water quality parameters listed below:

- Chloride in four wells varying from 4.24 mg/L to 17.6 mg/L (PQW-1)
- Fluoride in four wells varying from 0.094 mg/L to 0.145 mg/L (TPW-1)
- Alkalinity in all four wells varying from 36.3 mg/L to 75.9 mg/L (TPW-2)
- Hardness as $CaCO_3$ in two wells at 26.8 mg/L to 73.2 mg/L (TPW-2)
- Turbidity in all four wells varying from 0.7 to 90 Nephelometric Turbidity Units (NTU)
- Total Dissolved Solids ranged from 30 to 140 mg/L (TPW-5).
- Total Suspended Soilds ranged from 0.7 to 75 mg/L (TPW-5).

5.5 AQUIFER PUMP TEST WELLS AND OBSERVATION WELLS

No PCBs, pesticides, fecal coliform, Chlorophyll A, or SVOCs were detected in the four OW or three APT wells sampled during this monitoring event.

With the exception of trichloroethene, detected VOCs were below respective ADEC Water Quality Standards for Designated Uses criteria. Analyses detected trichloroethene at concentrations ranging from 0.00047 mg/L (OW-2) to 0.057 mg/L (OW-4), exceeding the ADEC Water Quality Standard for Designated Use criteria of 0.005 mg/L in samples collected from OW-4, APT-1, APT-2, and APT-3.

Gasoline range organics were detected in well APT-1 at 0.0497 mg/L. Analyses detected diesel range organics in all three APT wells and in OW-4 at concentrations ranging from 0.24 mg/L (APT-2) to 0.518 mg/L (APT-3). Residual range organics were detected in all four OW wells and in APT-3 at concentrations ranging from 0.155 mg/L to 0.476 mg/L. All detected hydrocarbons were well below respective ADEC Water Quality Standards for Designated Uses.

Various total metals were detected in all wells sampled. Detected concentrations of most total metals, including aluminum, antimony, arsenic, boron, chromium, copper, iron, lead, manganese, molybdenum, nickel, and vanadium, exceeded ADEC Water Quality Standards for Designated Uses in most wells. Detected total arsenic concentrations varied between 0.00131 mg/L and 0.131 mg/L, exceeding ADEC Water Quality Standards for Designated Use criteria of 0.01 mg/L in samples obtained from OW-2, OW-4, and APT-1 through APT-3. For OW-2, OW-4, APT-1, APT-2, and APT-3, detected concentrations of select dissolved metals including arsenic, copper, lead, and zinc also exceeded respective ADEC Water Quality Standards for Designated Uses.

For the water quality testing suite, testing reported the following:

- Chloride in seven wells varying from 5.67 mg/L to 41.6 mg/L (APT-3)
- Fluoride in seven wells varying from 0.112 mg/L to 3.03 mg/L (exceeds ADEC Water Quality Standard of 1 mg/L in APT-3)
- Alkalinity in all four wells varying from 60 mg/L to 509 mg/L (APT-3)
- Total Dissolved Solids in all seven wells varying from 74 mg/L to 709 mg/L (exceeds ADEC Water Quality Standard of 500 mg/L in APT-3)
- Hardness as CaCO3 in all seven wells varying from 15.2 mg/L to 91.2 mg/L (APT-1)

5.6 CONDITIONS IN THE VICINITY OF THE FORMER QUARRY PIT

Groundwater monitoring wells MW-27B and MW-87B, and the three Third-party wells (PQW-1, TPW-1, and TPW-2) are located in the general vicinity (within 500 feet) of the former quarry pit. Data from these wells are used to evaluate conditions in the vicinity of the former quarry.

During this event, petroleum hydrocarbons including gasoline range (0.359 mg/L, PQW-1) and diesel range (up to 0.354 mg/L, MW-87B) were identified in groundwater samples collected within the quarry area. Analyses also detected the presence of benzene up to 0.0066 mg/L, exceeding ADEC's Table C groundwater cleanup level of 0.005 mg/L.

Various total metals were detected in all wells located in the vicinity of the quarry. With the exception of arsenic, detected total metals were well below respective ADEC Table C groundwater cleanup levels, where established. Analyses detected arsenic up to 0.0149 mg/L, exceeding ADEC's Table C groundwater cleanup level and APT General Discharge Permit criteria of 0.01 mg/L in TPW-2.

Various dissolved metals were also detected in the two monitoring and three third-party wells at concentrations below respective ADEC Table C groundwater cleanup levels, where established.

For the water quality testing suite, testing reported the following:

- Chloride up to 26.9 mg/L (MW-27B)
- Fluoride up to 0.145 mg/L (TPW-2)
- Alkalinity up to to 75.9 mg/L (TPW-2)
- Hardness as $CaCO_3$ up to 73.2 mg/L (TPW-2)

6.0 CONCLUSIONS

Groundwater quality at the Site is affected by natural and anthropogenic processes. It is difficult to draw meaningful conclusions with just two data sets (Event 1 - April and Event 2 - August/September 2016), however, differences in water quality do exist between water bearing units. We provide a general discussion of water quality trends observed during the two monitoring events below.

6.1 COMPARISON OF WATER QUALITY DATA BETWEEN WATER BEARING UNITS

In general, no PCBs or pesticides were identified in any of the groundwater samples analyzed from the three water bearing units underlying the site. Between the two monitoring events, gasoline range, diesel range, and residual range organics have been detected within all three water bearing units, at similar concentrations, and below ADEC groundwater cleanup levels.

With the exception of bis(2-ethylhexyl)phthalate in well MW-74B, detected analytes in groundwater samples within Water Bearing Unit 1 have all been below ADEC groundwater cleanup levels. During the September monitoring event, bis(2-ethylhexyl)phthalate was detected in MW-74B at 0.0077 mg/L, exceeding the ADEC groundwater cleanup level of 0.006 mg/L.

Groundwater within Water Bearing Units 2 and 3, including groundwater in the vicinity of the quarry and the APT wells, has been shown to contain total and dissolved metals and select VOCs at higher concentrations than values detected in Water Bearing Unit 1 wells. Of particular note is the presence of total arsenic and trichloroethene concentrations that were detected at an order of magnitude higher in Water Bearing Units 2 and 3 wells than in Water Bearing Unit 1 wells. Detected concentrations of these analytes in select wells screened within Water Bearing Units 2 and 3 exceed ADEC groundwater cleanup levels, whereas these analytes, if detected, are below ADEC levels in Water Bearing Unit 1. Additionally, Water Bearing Units 2 and 3 also have higher pH levels than Water Bearing Unit 1. For comparison purposes, arsenic, trichloroethene, and pH values (as measured in the field) are presented by Water Bearing Unit on Plates 11 through 19, which contain data for both Events 1 and 2. Differences between the Water Bearing Units for a few of the major analytes are summarized in the following table:

Comparison of Major Analytes by Water Bearing Unit

Analyte	Water Bearing Unit 1	Water Bearing Unit 2	Water Bearing Unit 3
Total Arsenic	0.000713 mg/L to 0.00336 mg/L	0.00883 mg/L to 0.0474 mg/L	0.0798 mg/L
Trichloroethene	Not Detected (ND)	ND to 0.057 mg/L	0.015 mg/L
pH	4.82 to 7.30 SU.	7.08 to 8.67 SU	9.03 SU
Alkalinity	12 mg/L to 70.9 mg/L	70.3 mg/L to 106 mg/L	509 mg/L

Note: Results from Third-Party wells are not included in the data comparison presented above as it is not known what water bearing unit the wells are screened within.

Cations and anions from wells sampled during the two monitoring events were plotted on Piper Diagrams by Water Bearing Unit wells (see Plates 20 through 22). Inferences regarding water type can be drawn by reviewing the Piper Diagrams. Findings are summarized below:

- With the exception of well MW-39B, water within Water Bearing Unit 1 is calcium bicarbonate rich, indicative of a shallow fresh water environment.
- Water in the vicinity of well MW-39B is slightly more calcium sulfate rich than other wells screened within Water Bearing Unit 1.
- With the exception of water in the vicinity of wells MW-50A, MW-82A, and OW-2, groundwater within Water Bearing Unit 2 is also calcium bicarbonate rich, indicative of a shallow fresh water environment.
- Water in the vicinity of wells MW-50A, MW-82A, and OW-2 tends to be more sodium bicarbonate rich, which may be indicative of a deep groundwater environment influenced by ion exchanges.
- Water in the vicinity of APT-3, screened within Water Bearing Unit 3, tends to be more sodium bicarbonate rich, indicative of a deep groundwater environment influenced by ion exchanges.

6.2 COMPARISION OF WATER QUALITY DATA BETWEEN MONITORING EVENTS

For most analytes, results were similar between the two events. However, significant fluctuations of hydrocarbon concentrations were noted between the events in April and August/September 2016. The cause of the fluctuations is unknown. Gasoline range organics were detected in wells MW-39A and MW-39B in the April event, but were not detected in those wells during the August/September event. Additionally, diesel range organics were identified in ten (10) wells during the August/September event, compared to only one (1) well during the April 2016 event. Fluctuations were also noted for residual range organics between the two events, and appear to be independent of water bearing unit.

Where ADEC screening criteria exceedances were noted in April (total arsenic and benzene), similar exceedances and similar concentrations were also noted during the August/September event.

7.0 RECOMMENDATIONS

Monitoring events conducted to date have identified a potential concern with respect to water quality in the area of the former quarry where aquifer pump test water is being considered to be discharged. Groundwater in the area of the quarry and in the observation and aquifer pump test wells has been shown to contain total arsenic and/or benzene at concentrations above ADEC's screening criteria. Additionally, trichloroethene has been detected in water sampled from aquifer pump test wells APT-1 and APT-3. This and other differences in quality, including higher arsenic, pH, and alkalinity in the deeper Water Bearing Units 2 and 3, compared to water samples from Water Bearing Unit 1, need to be considered when evaluating the overall effect of discharging water from one water bearing unit into another. Additional monitoring is required to provide comparative data for continued trend analysis in order to facilitate a formal evaluation of groundwater conditions within the aquifers underlying the site.

Screening Criteria [7]	Water Quality Standards for Designated Uses			--	--	15	6.0 ≤. pH ≤8.5		--	--	≥ 4	5 [8]		--

Notes:

MW = Monitoring Well
DTW = Depth to Water
° C = degrees Celsius
SU = Standard Units
ORP = Oxidation Reduction Potential
mV = millivolts
SC = Electrical Conductivity
µS/cm[3] = microSiemens per cubic centimeter
DO = Dissolved Oxygen
mg/L = milligrams per liter

NTU = Nephelometric Turbidity Unit
ft BTOC = Feet Below Top of Casing
NA = Not Available/Not Analyzed
NM = Not Measured Due to Closed System
-- = Not Established
[1] = Parameter readings recorded last purge
[2] = Measured in gallons/minute
[3] = Field Measured
[4] = Lab Analytical Result. Analyzed via Method SM21 4500-H B
[5] = Lab analytical result. Analyzed via method SM21 2130B

[6] = second to last reading taken prior to sampling.
[7] = This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016. https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
[8] = May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than 10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for Discharge of Aquifer Pump Test water (Table 4). http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
[B] = The reported concentration was less than five times that of the associated method blank and/or trip blank

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016.
https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
3 - The field sample identification number and date collected are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - ADEC Calculator: http://dec.alaska.gov/water/cruise_ships/gp/2010/zinc_rpa_stationary.xls
6 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than 10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
7 - Standards are specific to various factors, such as a receiving water body (e.g., freshwater or saltwater)
See ADEC Water Quality Criteria Manual for Toxic and other Deleterious Organic and Inorganic substances, as amended through December 12, 2008, Appendices C through g.

Sample results exceeding the ADEC Table C Groundwater screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).
Detected concentrations in **BOLD**

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Non-detect, LOD is in brackets [ ] in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
H	Holding Time Exceeded
U	Analyte was analyzed for but not detected
*	Lab Control Sample or Lab Control Sample Duplicate outside of acceptance limits

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
VOCs	Volatile Organic Compounds

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016.
https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
3 - The field sample identification number and date collected are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - ADEC Calculator: http://dec.alaska.gov/water/cruise_ships/gp/2010/zinc_rpa_stationary.xls
6 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than
10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening
levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
7 - Standards are specific to various factors, such as a receiving water body (e.g., freshwater or saltwater)
See ADEC Water Quality Criteria Manual for Toxic and other Deleterious Organic and Inorganic substances,
as amended through December 12, 2008, Appendices C through g.

Sample results exceeding the ADEC Table C Groundwater screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).
Detected concentrations in **BOLD**

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Non-detect, LOD is in brackets [ ] in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
H	Holding Time Exceeded
U	Analyte was analyzed for but not detected
*	Lab Control Sample or Lab Control Sample Duplicate outside of acceptance limits

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
VOCs	Volatile Organic Compounds

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016.
https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
3 - The field sample identification number and date collected are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - ADEC Calculator: http://dec.alaska.gov/water/cruise_ships/gp/2010/zinc_rpa_stationary.xls
6 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than 10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
7 - Standards are specific to various factors, such as a receiving water body (e.g., freshwater or saltwater)
See ADEC Water Quality Criteria Manual for Toxic and other Deleterious Organic and Inorganic substances, as amended through December 12, 2008, Appendices C through g.

Sample results exceeding the ADEC Table C Groundwater screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).
Detected concentrations in **BOLD**

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Non-detect, LOD is in brackets [ ] in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
H	Holding Time Exceeded
U	Analyte was analyzed for but not detected
*	Lab Control Sample or Lab Control Sample Duplicate outside of acceptance limits

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
VOCs	Volatile Organic Compounds

Notes:

1 - This screening level corresponds to ADEC groundwater cleanup levels from 18 AAC 75.345 Table C. Revised 5/8/2016
http://dec.alaska.gov/commish/regulations/pdfs/18%20aac%2075.pdf
2 - This screening level corresponds to the most conservative values within ADEC Water Quality Standards 18 AAC 70. Amended 2/19/2016.
https://dec.alaska.gov/commish/regulations/pdfs/18%20AAC%2070.pdf
3 - The field sample identification number and date collected are provided.
4 - For detected results, the sample result is listed in this column. For results of non-detect, the LOD is listed in [ ] in this column.
5 - ADEC Calculator: http://dec.alaska.gov/water/cruise_ships/gp/2010/zinc_rpa_stationary.xls
6 - May not exceed 5 NTUs above natural conditions (NC) when the natural turbidity is 50 NTU or less, and may not have more than
10% increase in turbidity when the natural turbidity is more than 50 NTU, not to exceed a maximum increase of 25 NTU. Turbidity screening
levels corresponds to ADEC Alaska General Permit AKG003000 for discharge of Aquifer Pump Test (Table 6).
http://dec.alaska.gov/water/wnpspc/stormwater/docs/AKG003000_Hydrostatic_GP_Permit.pdf
7 - Standards are specific to various factors, such as a receiving water body (e.g., freshwater or saltwater)
See ADEC Water Quality Criteria Manual for Toxic and other Deleterious Organic and Inorganic substances,
as amended through December 12, 2008, Appendices C through g.

Sample results exceeding the ADEC Table C Groundwater screening criteria are shown in (**BOLD** with yellow shading).
Analyte was not detected, but the LOD was above the screening level (light blue shading).
Detected concentrations in **BOLD**

Abbreviations

--	Not applicable or screening criteria does not exist for this compound
AAC	Alaska Administrative Code
ADEC	Alaska Department of Environmental Conservation
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
PAH	Polycyclic Aromatic Hydrocarbon
SVOCs	Semi-volatile Organic Compounds
VOCs	Volatile Organic Compounds

Data Flags

=	Analyte detected at concentration listed in column to the left.
B	The reported concentration was less than five times that of the associated method blank and/or trip blank.
J	Result is considered an estimated value because the level is below the laboratory LOQ, but above the DL.
ND	Non-detect, LOD is in brackets [ ] in the concentration column.
MH, ML, MN	The quantitation was an estimate due to a quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
QH, QL, QN	The quantitation was an estimate due to a sample matrix quality control failure. Where applicable, a "H", "L", or "N" was used to indicate possible high, low, or unknown bias.
H	Holding Time Exceeded
U	Analyte was analyzed for but not detected
*	Lab Control Sample or Lab Control Sample Duplicate outside of acceptance limits
